

# State of Rhode Island Transportation Improvement Program FFY 2017-2025

Adopted September 8, 2016

Rhode Island Department of Administration  
Division of Planning  
Statewide Planning Program  
One Capitol Hill, Providence, RI 02908  
[www.planning.ri.gov](http://www.planning.ri.gov)

## **TITLE VI**

### **NONDISCRIMINATION POLICY & UNLAWFUL COMPLAINT PROCESS**

The Office of Statewide Planning, Division of Planning, Rhode Island Department of Administration hereby gives public notice that it is the policy of the department to ensure full compliance with Title VI of the Civil Rights Act of 1964, the Civil Rights Restoration Act of 1987 Executive Order 12898 on Environmental Justice, and related statutes and regulations in all programs and activities. Title VI requires that no person in the United States of America shall, on the grounds of race, color, sex, or national origin be excluded from the participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity for which the Office of Statewide Planning receives federal financial assistance.

Any person who believes he or she has been aggrieved by an unlawful discriminatory practice under Title VI has a right to file a formal complaint with the Office of Statewide Planning. Any such complaint must be in writing and filed with the Statewide Planning Title VI Coordinator within one hundred eighty (180) days following the date of the alleged discriminatory occurrence. Title VI Discrimination Complaint Forms may be obtained from RI Statewide Planning at no cost to the complainant by calling Michael C. Moan, the Title VI Coordinator at (401) 222-1236 or at <http://www.planning.ri.gov/statewideplanning/transportation/>

In conformance with the Americans with Disabilities Act, all publications of the Statewide Planning Program can be made available in electronic format. For information on obtaining this document in alternate format contact: the Rhode Island Statewide Planning Program, One Capitol Hill, Providence, RI 02908 (401.222.7901 voice) (401.222.2627 TDD).

## PREFACE

This document is the twenty-second in a series of State Transportation Improvement Programs (STIPs) for the State of Rhode Island, prepared by the Statewide Planning Program for adoption by the State Planning Council. It covers the federally required four year time period of federal fiscal years 17-20, with additional information included for federal fiscal years 2021-2025. Production of the STIP was carried out under the fiscal year 2016 Unified Planning Work Program of the Statewide Planning Program.

The Rhode Island Statewide Planning Program is established by Chapter 42-11-10 of the Rhode Island General Laws as the central planning agency for state government. The work of the Program is guided by the State Planning Council, comprised of state, local, and public representatives and federal advisors. The Council also serves as the single statewide Metropolitan Planning Organization (MPO) for Rhode Island. The staff component of the Program resides within the Department of Administration.

The objectives of the Program are to plan for the physical, economic, and social development of the state; to coordinate the activities of government agencies and private individuals and groups within this framework of plans and programs; and to provide planning assistance to the Governor, the General Assembly, and the agencies of state government. The Program prepares and maintains the State Guide Plan as the principle means of accomplishing these objectives. The State Guide Plan is comprised of a series of functional elements that address physical development, environmental concerns, the economy, and human services.

Program activities are supported by state appropriations and federal grants. Funding for production of this transportation improvement program was provided principally by funds from the Federal Highway Administration and Federal Transit Administration. State of Rhode Island general appropriations to the Statewide Planning Program provided additional support. The contents of the document reflect the views of the MPO, which is responsible for the accuracy of the facts and data presented herein. The contents do not necessarily reflect the views and policies of the U.S. Department of Transportation. This publication is based upon publicly supported research and may not be copyrighted. It may be reprinted, in part or in full, with proper attribution of the source.

## COMMITTEES AND STAFF

### State Planning Council

Michael DiBiase, Chair, Rhode Island Department of Administration, Director

Lisa Vura-Weis, Vice Chair, Governor's Office

Jared L. Rhodes II, Rhode Island Division of Planning, Acting Associate Director

Dr. Nicole Alexander-Scott, Rhode Island Department of Health, Director

Peter Alviti, Rhode Island Department of Transportation, Director

Daniel Beardsley, Rhode Island League of Cities and Towns, Executive Director

Jeanne Boyle, Rhode Island League of Cities and Towns, President's Designee

Janet Coit, Rhode Island Department of Environmental Management, Director

Jeanne Cola, Representative of Nonprofit Housing

Mathies Joseph Santos, Rhode Island Housing Resources Commission, Chair

Roy Coulombe, Public member

Barbara Fields, Executive Director, Rhode Island Housing

Grover Fugate, Rhode Island Coastal Resources Management Council

Marion Gold, Commissioner, Rhode Island Office of Energy Resources

Marcus Mitchell, Small Business Representative

Thomas Mullaney, Rhode Island Department of Administration, Budget Office

L. Vincent Murray, Rhode Island League of Cities & Towns, Local Government Representative

Bonnie Nickerson, City of Providence - Department of Planning and Development, Director

Sandy O'Connor, Governor's Designee

Stefan Pryor, Secretary of Commerce

M. James Riordan, Public Member

Raymond Studley, Director, RI Public Transit Authority

Girard R. Visconti, Esq., Employer with more than 50 Employees

Scott Wolf, Environmental Advocate

### Transportation Advisory Committee

Fran Shocket, Chair, Public Member - Jamestown

Everett Stuart, Vice Chair, RI Association of Railroad Passengers

Lloyd Albert, AAA Southern New England

Daniel Baudouin, Providence Foundation

Barbara Breslin, Federal Highway Administration, Advisory Member

Meredith Brady, Rhode Island Department of Transportation

Alan Brodd, Town of Cumberland

Michael Cassidy, Public Member, Pawtucket

Richard Crenca, City of Warwick

Judith Drew, Governor's Commission on Disabilities

John Flaherty, Grow Smart RI

Bari Freeman, Bike Newport

Ron Gagnon, RI Department of Environmental Management

Martina Haggerty, City of Providence - Department of Planning & Development

Jonathan Harris, Sierra Club

Eliza Lawson, Rhode Island Department of Health

Chris Maxwell, RI Truckers Association

George Monaghan, Rhode Island Consulting Engineers

Daniel Porter, Rhode Island Airport Corporation

Timothy Scanlon, Construction Industries of Rhode Island

Pamela Sherrill, RI Chapter, American Planning Assoc. (APA)

Dinalyn Spears, Narragansett Indian Tribe

Lillian Shuey Picchione, Rhode Island Public Transit Authority

Michael Walker, Rhode Island Commerce Corporation

Michael Wood, Town of Burrillville

### Technical Committee

Robert Azar, Chair, City of Providence - Department of Planning & Development

Michael DeLuca, Vice Chair, Town of Narragansett - Community Development

Barbara Breslin, Federal Highway Administration, Advisory Member

John Chambers, Fuss and O'Neill

Steve Devine, Rhode Island Department of Transportation  
Ashley Hahn, Exeter Town Planner  
Nate Kelly, American Planning Association RI Chapter  
Thomas Kogut, Rhode Island Public Utilities Commission  
Nicole LaFontaine, Town of North Kingstown - Planning Department  
Eliza Lawson, RI Department of Health  
Lisa Primiano, Department of Environmental Management  
Jennifer Siciliano, City of Woonsocket – Planning Department  
Arnold Robinson, Roger Williams University  
Michael Walker, Rhode Island Commerce Corporation  
Jeffrey Willis, Rhode Island Coastal Resources Management Council  
Ronald Wolanski, Town of Middletown

## **Staff**

### **Statewide Planning Program**

Jared Rhodes, Acting Associate Director  
Karen G. Scott, Assistant Chief  
Kirsten Bryan, Principal Planner  
Linsey J. Callaghan, Supervising Planner  
Paul Capotosto, Principal Accountant  
Kimberly Crabill, Executive Assistant  
Vincent Flood, Supervising Planner  
Kim A. Gelfuso, Information Services Technician II  
Paul Gonsalves, Senior Planner  
Caitlin Greeley, Principal Planner  
Benjamin Jacobs, Principal Research Technician  
Michael C. Moan, Principal Planner  
Chelsea Siefert, Principal Planner  
Chris Witt, Principal Planner

### **Rhode Island Department of Transportation**

Peter Alviti Jr., P.E., Director  
Celia Blue, Chief of Staff  
Peter J. Garino, Deputy Director  
Diane Badorek, Chief Civil Engineer  
Meredith Brady, Department Budget Administrator

David Capalbo, Principal Civil Engineer  
Steve Church, State Bicycle/Pedestrian Program Coordinator  
Stephen Devine, Chief, Intermodal Planning  
Loren Doyle, Chief Financial Officer  
David Fish, P.E., Managing Engineer  
Ryan Gardiner, Assistant Director, Financial and Contract Management  
Russell Holt, Senior Civil Engineer  
Anita Marshall, Principal Civil Engineer  
David Martone, Principal Planner  
John Megrđichian, Administrator, Financial Management  
Craig Nazareth, Supervising Bridge Safety Inspector  
Luanne Nevitt, Principal Civil Engineer  
Vincent Palumbo, Managing Engineer  
Steve Pristawa, Chief Civil Engineer  
Thomas Queenan, Chief, Program Development  
Sean Raymond, Senior Civil Engineer  
Robert Rocchio, Managing Engineer  
Christos S. Xenophontos, Assistant Director for Administrative Services  
Lambri Zerva, Acting Managing Engineer

### **Rhode Island Public Transit Authority**

Ray Studley, Chief Executive Officer  
Amy Pettine, Executive Director of Planning  
Sarah Ingle, Principal Planner  
Greg Nordin, Principal Planner, Special Projects  
Lillian S. Picchione, Director of Capital Development

## ABBREVIATIONS & ACRONYMS

**ACS** – U.S. Census Bureau’s American Community Survey

**ADA** – Americans with Disabilities Act

**AET** - All Electronic Tolling

**B/C ratios** - Benefit Cost ratios; (amount of benefit gained compared to the cost of the improvement)

**CEO** – Chief Executive Officer

**CMAQ** – Congestion Mitigation and Air Quality

**DHS** – Department of Human Services

**DSR** - Design Study Report

**FAST** - “Act” Fixing America’s Surface Transportation Act (Federal Transportation Funding Bill of 2015)

**FFY** – Federal Fiscal Year (October 1st to September 30th)

**FHWA** – Federal Highway Administration

**FTA** - Federal Transit Administration

**GARVEE** - Grant Anticipation Revenue Vehicle bond

**GATRA** - Greater Attleboro Taunton Regional Transit Authority

**GIS** – Geographic Information System

**HMA** - Highway Maintenance Account

**HOV** - High-Occupancy-Vehicle

**HSIP** - Highway Safety Improvement Program

**HSP** - Highway Safety Plan

**ISTEA** - Surface Transportation Enhancement Act (Federal Transportation Funding Bill of 1991)

**ITS** – Intelligent Transportation Systems

**LBR** - Localized Bottleneck Reduction program (RIDOT Highway Safety Improvement Program)

**LED** – Light emitting diode

**MAP-21** - Moving Ahead for Progress in the 21st Century (Federal Transportation Funding Bill 2012)

**MBTA** – Massachusetts Bay Transportation Authority

**MPO** – Metropolitan Planning Organization

**NAAQS** - National Ambient Air Quality Standards

**NBI** - National Bridge Inventory

**NBIS** - National Bridge Inspection Standards

**NHFP** - National Highway Freight Program

**NHPP** - The National Highway Performance Program

**NHS** - National Highway System

**NHTSA** - National Highway Traffic Safety Administration

**PAP** - Physical Alteration Permit

**PPEST** - Paver Placed Elastomeric Surface Treatment

**PSHI** - The Pavement Structural Health Index

**RI\*STARS** - Strategically Targeted Affordable Roadway Solutions

**RICAP** - The Rhode Island Capital Plan

**Ride** – RIPTA’s ADA Comparable Paratransit Service required by Americans with Disabilities Act (ADA).

**RIDMV** – Rhode Island Division of Motor Vehicles

**RIDOT** - Rhode Island Department of Transportation

**RIHMA** – Rhode Island Highway Maintenance Account

**RIPTA** - Rhode Island Public Transit Authority

**RISPP** - Rhode Island Statewide Planning Program

**RITBA** – Rhode Island Turnpike and Bridge Authority

**RSA** - Road Safety Audit

**RTAP** - Rural Transportation Assistance Program

**SAFETEA-LU** – Safe Accountable Flexible Efficient Transportation Equity Act: A Legacy for Users (Federal Transportation Funding Bill 2005)

**SHSP** – Rhode Island’s Strategic Highway Safety Plan

**SPC** - State Planning Council

**SPG** – Seven Select Population Groups of the Equity Benefit Analysis

**SPR** - State Planning and Research

**SRTA** - Southeastern Regional Transit Authority

**SRTS** – Safe Routes to School

**STBG** - The Surface Transportation Block Grant

**STC** - State Traffic Commission

**STIP** - State Transportation Improvement Program

**TAC** – Transportation Advisory Committee

**TAP** – Transportation Alternatives Program

**TEA-21** - Transportation Equity Act for the 21st Century (Federal Transportation Funding Bill of 1998)

**TEBA** – Transportation Equity Benefit Analysis

**TIP** – Transportation Improvement Program

**USDOT** - U.S. Department of Transportation

**UZA** – Urbanized Area (U.S. Census; geographic central core plus adjacent area of > 2,500 residents)

## BACKGROUND

### Overview of the STIP

The State Transportation Improvement Program (STIP) is a list of transportation projects the State of Rhode Island intends to implement using United States Department of Transportation funds. For a transportation project to utilize federal funds it must be included in the STIP. The STIP is the product of extensive data analysis coupled with a significant outreach effort to communities, public interest groups, and citizens throughout the state.

A project's inclusion in the STIP is a critical step, but it does not represent an allocation of funds, obligation to fund, or grant of funds. Projects supported with federal dollars are only guaranteed funding after the Rhode Island Department of Transportation (RIDOT) or the Rhode Island Public Transit Authority (RIPTA) or the U.S. Department of Transportation (USDOT) reviews the design, financing, and environmental impacts of a project. Project sponsors must work cooperatively with RIDOT, RIPTA, or the federal agencies to guarantee the federal funding identified in the STIP. This federal guarantee is referred to as an obligation.

The first four years of the STIP must be fiscally constrained, meaning the list of projects in the STIP may not exceed the anticipated funding that is reasonably expected to be available over the four-year timeframe. In order to add projects to the STIP, sufficient revenues must be available. As a result, the STIP is not a wish list but a list of projects with anticipated, but not guaranteed, funding commitments during the timeframe.

### STIP REGULATORY FRAMEWORK

#### Federal Requirements

Each metropolitan planning organization (MPO) is required, under 49 U.S.C. 5303(j), to develop a Transportation Improvement Program (TIP)—a list of upcoming transportation projects—covering a period of at least four years. The TIP must be developed in cooperation with the State and public transit providers. The TIP should include capital and non-capital surface transportation projects, bicycle and pedestrian facilities and other transportation enhancements, Federal Lands Highway projects, and safety projects included in the State's Strategic Highway Safety Plan. The TIP should include all regionally significant projects receiving Federal Highway Administration (FHWA) or Federal Transit Administration (FTA) funds, or for which FHWA

or FTA approval is required, in addition to non-federally funded projects that are consistent with the Metropolitan Transportation Plan. Furthermore, the TIP must be fiscally constrained across at least the first four years.

Each State is required, under 49 U.S.C. 5304(g), to develop a state transportation improvement program (STIP) for all areas of the State, covering a period of at least four years. The STIP is a staged, multi-year, statewide intermodal program of transportation projects, consistent with the statewide transportation plan and planning processes as well as metropolitan plans, transportation improvement programs, and planning processes. The STIP must be developed in cooperation with the metropolitan planning organizations, public transit providers, and any Regional Transportation Planning Organizations in the State, and must be compatible with the TIPs for the metropolitan areas in the State.

In Rhode Island, the MPO planning area encompasses the entire state, therefore this FY 17-25 STIP/TIP satisfies all the requirements outlined above for both a STIP and a TIP in a singular document. In Rhode Island, the terms STIP and TIP are used interchangeably.

Federal regulations call for the designation of an MPO responsible for coordinating with RIDOT and RIPTA to meet federal transportation regulations. In Rhode Island, the MPO is the State Planning Council as established by RIGL 42-11-10.

Federal regulations require that a Transportation Improvement Program (TIP) be prepared for the urbanized areas within the state. Rhode Island is covered by three urbanized areas: the Providence RI-MA urbanized area, the Norwich-New London CT-RI urbanized area, and the Boston MA-NH-RI urbanized area (Figure 1: Rhode Island Urbanized Area). The Rhode Island MPO covers the entire state, therefore a single, statewide TIP/STIP, which satisfies all requirements for metropolitan and statewide planning under federal law is adopted.

The MPO must adopt a new STIP at a minimum of every four years. The STIP must present a four year program, by year, and may present additional projects proposed for funding in future years. For the past several years, the STIP in Rhode Island has covered the minimum four federal fiscally constrained years and has included one additional category called "Future Years" which included projects that would be pursued should additional funds become available. This STIP, the Federal Fiscal

Year (FFY) 17-25 STIP, covers a longer time period by including the required four fiscally constrained years and expanding the previous single “Future Years” category to give municipalities and the general public a better idea of which projects are moving through development into implementation.

### FAST Act and Regulations

On December 4, 2015, the Fixing America’s Surface Transportation (FAST) Act, authorizing Federal highway, highway safety, transit, and rail programs for five years from FFY 2016 through 2020, was signed into law. The FAST Act represents the first long-term comprehensive surface transportation legislation since the Safe Accountable Flexible Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) Act in 2005.

Overall, the FAST Act largely maintains current program structures and funding shares between highways and transit as outlined in Moving Ahead for Progress in the 21st Century (MAP-21), the two-year bill authorizing federal transportation programs, which was signed into

### More Information

For details on the FAST Act visit:

<https://www.fhwa.dot.gov/fastact/index.cfm>

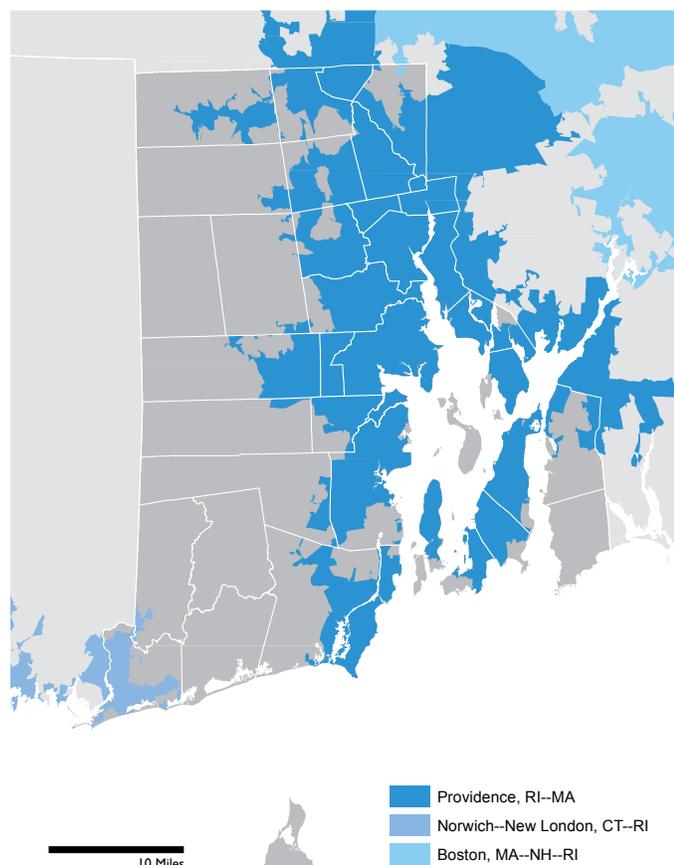

law in 2012 and extended four times until its replacement with the FAST Act.

Regulations require states to develop plans that specifically address how they will improve and sustain the conditions of roads and bridges on at least the National Highway System (NHS). The NHS is a national network of the nation’s most important roads. The roads in Rhode Island that are on the NHS are listed in tables by municipality at <http://www.planning.ri.gov/statewideplanning/transportation/reclass.php>.

When the federal regulations are finalized, states will be required to set targets for the physical condition of highways and bridges and develop asset management plans for how they will sustain those targets into the future. This is a change from previous federal requirements, which focused on planning for how the highway network performs in terms of congestion, highway crashes and auto and truck air pollution. States are also required to accompany the asset management plan with a realistic financial plan that reports how much money is needed to sustain the set targets. The purpose of the financial plan is to highlight differences between the needed investment and projected revenues. Similar to MAP-21, the FAST Act did not give a specific goal for pavement condition for roads on the NHS but it did specify a goal of having no more than 10 percent of a state’s NHS bridge deck area in poor condition. Currently, 22% of Rhode Island’s bridges are structurally deficient (poor condition), which ranks Rhode Island last in the nation in overall bridge condition.

To address these requirements, the MPO has been working collaboratively with RIDOT, RIPTA and other transportation groups over the past several years to develop a strategy for stabilizing Rhode Island’s bridge and pavement conditions. One of the largest shifts that has been occurring is the migration of transportation infrastructure planning to an asset management based system of planning, which increases the emphasis on preservation and maintenance to keep assets in good condition, avoiding more expensive long term costs. When asset management principles are implemented, taxpayers save millions of dollars in future infrastructure costs and the future conditions of assets based on given

Figure 1: Rhode Island Urbanized Area

credit: RISPP

Image 2: Sakonnet River Bridge Construction

credit: RIDOT

investment levels can be compared. It focuses on making the best investment decisions that will result in the best long term benefit for the state’s entire transportation network.

In addition to the policies outlined above, the FAST Act makes changes and reforms to many federal transportation programs, including streamlining the approval processes for new transportation projects, providing new safety tools, and establishing new programs to advance critical freight projects.

## State/MPO Regulations and Policy

### State Planning Council Rules of Procedure

The State Planning Council is designated as the MPO for the State of Rhode Island by section 42-11-10 of the General Laws of Rhode Island entitled, “Statewide Planning Program.” The MPO includes membership from state agencies, local government, the transit operator, and the general public. The MPO is staffed by the Statewide Planning Program, Division of Planning a unit of state government within the Department of Administration. Rule Five of the State Planning Council’s Rules and Standards specifically addresses the MPO and Transportation Planning.

The rule sets forth procedures:

1. By which the public will be involved in transportation planning in Rhode Island, through a proactive process that is based on stated principles:
  - a. opportunity for early and continuing public involvement;

- b. identification of, and contact with, as many persons and organizations as possible who are thought to be interested;
- c. outreach to persons traditionally underserved by transportation systems, such as low income and minority households in order to identify and consider their needs;
- d. inclusion of the general public by appropriate means, such as web postings;
- e. timely notice of meetings; and
- f. provision of complete information by the Division of Planning, and adequate staff support, given available resources.

2. By which the State Planning Council will participate in an interagency consultation process with the Rhode Island Department of Environmental Management and the Rhode Island Department of Transportation, to make determinations of conformity of transportation plans, programs, and projects to the State Implementation Plan in order to assure, to the greatest extent possible, that such plans, programs, and projects eliminate or reduce the severity and number of violations of the national ambient air quality standards and facilitate achieving and maintaining such standards. (These standards are applicable if Rhode Island is not in attainment of the designations for the National Ambient Air Quality Standards (NAAQS). As of the adoption of this STIP, Rhode Island is an attainment area under the NAAQS.)
3. To supplement federal regulations, as applicable.

## More information

State Planning Council Rules and Standards, including specific requirements guiding the STIP development and adoption process can be found at:

[http://www.planning.ri.gov/documents/council/SPC\\_Rule\\_%202014.pdf](http://www.planning.ri.gov/documents/council/SPC_Rule_%202014.pdf).

## Themes and priorities of the STIP

### Asset Management

Rhode Island is proposing a longer STIP time frame than the minimum four years required by federal regulations. A key component of the state's vision to improve and preserve statewide transportation infrastructure over the next several years is the development of asset-centered programs that put the state on a path to eliminate structural deficiencies by the ramping up of maintenance investment to ensure future infrastructure condition. This is best achieved through a longer term, fiscally constrained vision than the traditional four year STIP.

### Bridge Construction

According to the FHWA, Rhode Island bridges rank worst in the nation. One out of every five bridges in Rhode Island is structurally deficient. This STIP proposes a "surge" of bridge construction improvements in the first five years of the program, both for bridge reconstruction and preservation. By investing more in bridge preservation efforts up front, the state can arrest the downward trend of bridge deterioration more cost-effectively. Bridge replacement is six times more expensive than bridge preservation. By investing more up front, the State can achieve the federal minimum standard of 90% bridge sufficiency by 2025.

### Operations and Maintenance

As a result of the improved bridge conditions resulting from the steps outlined above, it is estimated that the state can save over \$20 million in bridge inspection and emergency bridge repairs over the timeframe of the STIP. RIDOT expects to in-source certain services, including striping, bridge inspection, and winter maintenance, which is expected to reduce soft costs over the time period of the STIP. The maintenance program includes maintenance for bridges, pavement, traffic safety, drainage, and also includes investment in staff. RIDOT is converting 40 positions from existing vacancies to maintenance staff, a critical need. In 1980, there were nearly 600 maintenance staff. Today, there are slightly more than 200, performing many of the same functions.

An asset management approach to maintenance means that every dollar invested today can save \$3 in costs in future years.

### Routes 6 and 10

The STIP includes funding for the reconstruction of the Route 6/10 interchange. It is anticipated that Rhode Island's investment could be leveraged to attract additional discretionary funding to include a transit feature within the corridor. This project includes the study of possible enhancements to Route 6 and 10 within the City of Providence, including the evaluation of the potential conversion from a highway to a boulevard.

### Pavement

This STIP invests funding for pavement projects throughout Rhode Island. The Pavement Structural Health Index (PSHI) will be maintained at an average of 80% over the ten years of the program by investing in road surfaces using a "right treatment, to the right pavement, at the right time" approach to prevent pavement failure. The investment outlined in the STIP allows for additional miles to be paved, improves the total PSHI and extends the life of the road surface.

### Transit

This STIP includes the development of several new, large-scale transit projects. The Downtown Providence Enhanced Bus Circulator is an urban circulator project that will connect major employment hubs and world class institutions to the downtown core, while passing directly through the City's key redevelopment area, made available by the recent relocation of Interstate 195. In addition, this STIP includes funding for a new commuter rail station on the Pawtucket/Central Falls city line.

### Transportation Alternative Program

This STIP invests funding in transportation alternatives statewide. Key connections in the state bicycle network will be constructed while new segments will be studied and designed. The state's recreational trails program will continue and investments will be made in upgrading the pedestrian infrastructure in some of the state's most densely developed areas and in the vicinity of schools. Additional funding will improve some of the state's most important historic transportation structures.

### Drainage

The drainage program in the STIP includes a comprehensive plan to inspect and inventory Rhode Island's statewide highway drainage systems. The state

is responsible for an estimated 25,000 stormwater catch basins, 2,000 outfalls, and 100 structural best management practices (stormwater treatment systems). The inventory results will drive development of the investment plan outlined in the STIP. This plan will allow the state to meet the requirements of the consent decree with the Environmental Protection Agency and also take a more proactive approach to stormwater management. As storms become more frequent and coastal flooding becomes a growing threat, the need to inventory, repair, and maintain drainage systems becomes more critical to prevent hazards and deterioration of other transportation infrastructure components.

### **Traffic Safety**

The traffic safety program allocates funding to projects statewide, including the replacement of traffic lights, streetlights, and signals; improvements to projects at high-hazard intersections, signage, and those specified by the State Traffic Commission. Also included is the RI\*STARS program (Strategically Targeted Affordable Roadway Solutions) which involves partnerships between local communities and RIDOT to identify critical safety and congestion locations and develop detailed improvement plans for selected locations with the focus on delivering low-cost and high benefit safety and mobility improvements.

# STIP PROGRAM DEVELOPMENT PROCESS

## PROCESS OVERVIEW

### Solicitation

The MPO initiated the formal development of the STIP for FFY 2017 – 2025 in October 2015 with the release of RIDOT’s Ten Year Strategic Plan. RIDOT released the Ten Year Strategic Plan to illustrate how the Department would emphasize preservation and maintenance to keep assets in good condition, avoiding more expensive long term costs, while streamlining funding for overall operations, pavement and drainage and reach the federally mandated 90% structural sufficiency of bridges. While RIDOT’s Ten Year Strategic plan is not the STIP, it did become the foundation for outlining a program of investments through the STIP.

The RIDOT Ten Year Strategic Plan presents a recommended pool of projects and programmatic investment levels that RIDOT proposes would constitute the most efficient use of the state’s limited transportation resources. The funding categories of Bridge, Pavement, and Traffic present lists of projects which were developed using RIDOT’s asset management systems, optimizing the impact on the total investment in Rhode Island’s transportation network. This type of project selection is critical for integrating data driven decisions and asset management into the state’s transportation process. Other funding categories such as Transit Capital and Transportation Alternatives are shown as only a total budget per year. These projects are better suited for selection using a set of guiding principles which are outside of objective engineering criteria and take into consideration such things as mobility, cost effectiveness, environmental impact, economic development, support for state and local goals, safety and security, and equity.

A key component of the STIP process is the incorporation of stakeholder input. Municipalities, citizens, state agencies, regional planning organizations, transportation providers, and non-profits were all invited to submit project proposals. The Statewide Planning Program prepared and distributed detailed informational resources to facilitate the public participation process including a Status Report of all projects in the FFY 13-16 TIP, a “Guide to Rhode Island’s FFY 2017-2025 TIP Development Process”, which outlines exactly how to participate in the TIP process available at, <http://www.planning.ri.gov/statewideplanning/transportation/tip.php>, and project prioritization forms pre-populated with

all projects proposed in each specific municipality as part of the RIDOT Ten Year Strategic Plan.

While all interested parties were welcome to participate in the TIP process, the Statewide Planning Program specifically asked municipalities to hold a local public hearing on the projects intended for submission as part of the TIP process and submit a single, prioritized list of projects that includes all municipal priority projects for consideration.

### Informational Workshops

The Statewide Planning Program hosted two informational workshops to provide an overview and answer questions on the STIP process. RIPTA hosted a Listening Session to invite input and kick-start a conversation with municipal officials and planners regarding existing transit service and facilities, as well as potential expansion and enhancements. Concepts and priorities discussed during the Listening Session informed the detailed STIP proposal that was submitted by RIPTA.

Project proposals were due on January 8, 2016. Over 300 new applications containing over \$880 million in total requests were received from municipalities, state agencies, and non-profit organizations.

### Regional Public Meetings

The Statewide Planning Program conducted four regional meetings and invited applicants to come present their project applications to staff and members of the Transportation Advisory Committee (TAC), a subcommittee of the State Planning Council.

### More information

#### STIP solicitation information is available at:

<http://www.planning.ri.gov/statewideplanning/transportation/tip.php>

#### All STIP requests are available at:

<http://www.planning.ri.gov/statewideplanning/transportation/tip.php>

#### Regional meeting summaries are available at:

<http://www.planning.ri.gov/statewideplanning/transportation/tip.php>

## Project Selection

### Subcommittee Review

As outlined previously, a key focus of the FFY 17-25 STIP is to better integrate transportation asset management principles into the overall transportation planning process, therefore projects in the categories of Bridge, Pavement, Traffic and Drainage and Regionally Significant projects were referred to RIDOT to be evaluated primarily using data driven management systems, optimizing the impact of the total investment in Rhode Island's transportation network.

All other projects were evaluated by a subcommittee comprised of staff of the MPO, RIDOT, RI Department of Environmental Management (RIDEM), RIPTA and members of the TAC. Although the projects were not scored using a numeric scoring process, the subcommittees used guiding principles in their decision making. This defined set of guiding principles are outside of objective engineering criteria and take into consideration such things as mobility, cost effectiveness, environmental impact, economic development, safety and security, support for state and local goals and equity.

There were six subcommittees of the TAC focusing on projects in the following topic areas:

#### Recreational Trails

Projects considered by this subcommittee included (but were not limited to) maintenance and restoration of existing trails, development and rehabilitation of trailside and trailhead facilities and trail linkages, purchase and/or lease of trail construction and maintenance equipment, construction of new trails, acquisition of easements or property for trails, assessment of

#### TIP Guiding Principles

- > Mobility Benefits
- > Cost Effectiveness
- > Economic Development
- > Environmental Impact
- > Supports Local and State Goals
- > Safety and Security
- > Equity

**Full guiding principles are available at:**  
<http://www.planning.ri.gov/statewideplanning/transportation/tip.php>

Image 3: South County Bike Path

credit: RIDOT

trail conditions for accessibility and maintenance, development and dissemination of publications and operation of educational programs to promote, safety and environmental protection related to trails.

#### Bicycle Facilities

Projects considered by this subcommittee included (but were not limited to) improvements and amenities and provisions to accommodate, enhance, or encourage bicycling, such as bicycle lanes and paths, traffic control devices, parking, storage facilities, and bicycle sharing systems.

#### Pedestrian/ADA Facilities

Projects considered by this subcommittee included (but were not limited to) pedestrian access routes and amenities, such as benches and lighting, and provisions to safely accommodate, enhance, or encourage walking. This subcommittee also considered projects that would further the implementation of Rhode Island's federally mandated ADA Transition Plan.

#### Safe Routes to School

Projects considered by this subcommittee included (but were not limited to) those that enable and encourage children, including those with disabilities, to walk and bicycle to school, make bicycling and walking to school a safer and more appealing transportation alternative, and facilitate the planning, development, and implementation of projects and activities that will improve safety and reduce traffic, fuel consumption, and air pollution in the vicinity of schools.

## Other Transportation Alternatives

Projects considered by this subcommittee included (but were not limited to) enhancements projects that were included in the FY 13-16 STIP but not completed and projects that did not fall into the above categories, including construction of turnouts, overlooks and viewing areas, historic preservation and rehabilitation of historic transportation facilities, vegetation management practices in transportation rights-of-way to improve roadway safety, prevent against invasive species, and provide erosion control, archaeological activities relating to impacts from implementation of a transportation projects, and environmental mitigation.

## Transit

Projects considered by this subcommittee included (but were not limited to) capital and operational investments in all variations of bus, rail, ferry, and air transport.

These subcommittees met several times to review and rank projects according to the TIP Guiding Principles. The Final Reports of each subcommittee are available at <http://www.planning.ri.gov/statewideplanning/transportation/tip.php>.

Five subcommittees (Recreational Trails, Bicycle Facilities, Pedestrian/ADA Facilities, Safe Routes to School, and Other Transportation Alternatives)

reviewed and ranked projects eligible for Transportation Alternatives funding. Using the subcommittee rankings, staff led the TAC through an exercise to develop a single, prioritized master list of projects for potential inclusion in the FFY 17-25 STIP under the Transportation Alternatives Program (TAP).

The recommended transit projects developed by the transit subcommittee and the TAP projects, ranked by the TAC as a whole, were forwarded to RIDOT for a final budget review and scheduling within the STIP time frame. The project funding tables were returned to the Statewide Planning Program to be combined with text and analysis to form a draft FF Y 17-25 STIP document for public review.

## Approval and Adoption Process

The draft STIP was released on April 25, 2016 and a public hearing was held on May 26, 2016. The final draft was reviewed and recommended for adoption by the Transportation Advisory Committee on August 25, 2016. The State Planning Council adopted the final FFY 17-25 Transportation Improvement Program on September 8, 2016.

credit: RIDOT

## STIP RESOURCES

### PROJECTS AND PROGRAMS

Projects and programs included in the STIP are implemented by the responsible entity, primarily RIDOT and RIPTA, based on project mode. In general, bus projects are implemented by RIPTA while most other projects and programs, including pavement, bridge, and rail projects are implemented by RIDOT. These agencies must include funding for STIP projects within their annual budgets. Generally, federal funds for Highway and Fixed Guideway Transit flow through RIDOT, the designated statewide recipient for these funds. RIPTA is the designated statewide recipient for bus transit funds.

### FEDERAL FUNDING

#### Highway Funding (FHWA)

Beginning in 1992, the federal government provided transportation infrastructure funding to the states through five and six-year authorization bills, beginning with the Intermodal Surface Transportation Enhancement Act (ISTEA) and the Transportation Equity Act for the 21st Century (TEA-21). These long-term funding bills allowed for program development and provided a reliable source of funds to the states.

In August 2005, President Bush signed into law the “Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users” (SAFETEA-LU), which reauthorized the Federal Highway and Transit programs for federal fiscal years 2005 through 2009. Highway funding for Rhode Island under SAFETEA-LU averaged \$202 million dollars per year, compared to \$186 million Rhode Island received from 2002 through 2004.

SAFETEA-LU, expired on September 30, 2009 without a new long-term reauthorization in place. Congress continued the federal highway program by extending SAFETEA-LU for ten short periods, with only minor adjustments to the substantive provisions of the Act. In late June 2012, Congress approved a new two-year transportation authorization, Moving Ahead for Progress in the 21st Century (MAP-21), which shifted the federal planning and project model toward performance management and measurement. Between the limited term of the authorization and its five subsequent extensions, ranging from eight months to just three weeks, the state was limited in its ability to plan on future federal funding for capital projects.

In December 2015, Congress passed a five-year authorization: Fixing America’s Surface Transportation, or FAST. The FAST Act continues the MAP-21 focus on performance and asset management, while providing for a modest increase in federal program funds.

Overall, Rhode Island anticipates annual increases of less than 3% over the five-year term of the FAST Act, or an average of \$20 million annually, bringing the state’s total FHWA funding to \$240 million by FFY 2020. The FAST Act directs approximately \$38.2 million in transit funding to the state in FFY 2017. That allocation rises to \$39.9 million by FFY 2020, about a 2% annual growth.

Beyond the time period of the FAST Act (FFY 2021 through 2025), funding levels and increases based on those in the FAST Act have been assumed. Federal funds received by the state must be matched in varying amounts by state funds, generally at a ratio of 80% federal to 20% state. All federal and state funding sources are detailed below.

#### Description of Sources

##### National Highway Performance Program

The National Highway Performance Program (NHPP) is a broad category of funding which allows expenditures on a wide range of programs and projects. The state Planning and Research (SPR) programs receives a 2% set-aside from this category, which is detailed under Planning funding. Expenditures must support progress toward achievement of national performance goals for improving infrastructure condition, safety, mobility, or freight movement on the NHS, and may include the following:

- Construction, reconstruction, resurfacing, restoration, rehabilitation, preservation, or operational improvements of NHS segments;
- Construction, replacement (including replacement with fill material), rehabilitation, preservation, and protection (including scour countermeasures, seismic retrofits, impact protection measures, security countermeasures, and protection against extreme events) of NHS bridges and tunnels;
- Bridge and tunnel inspection and evaluation on the NHS and inspection and evaluation of other NHS highway infrastructure assets;
- Construction, rehabilitation, or replacement of existing ferry boats and facilities, including approaches, that connect road segments of the NHS;

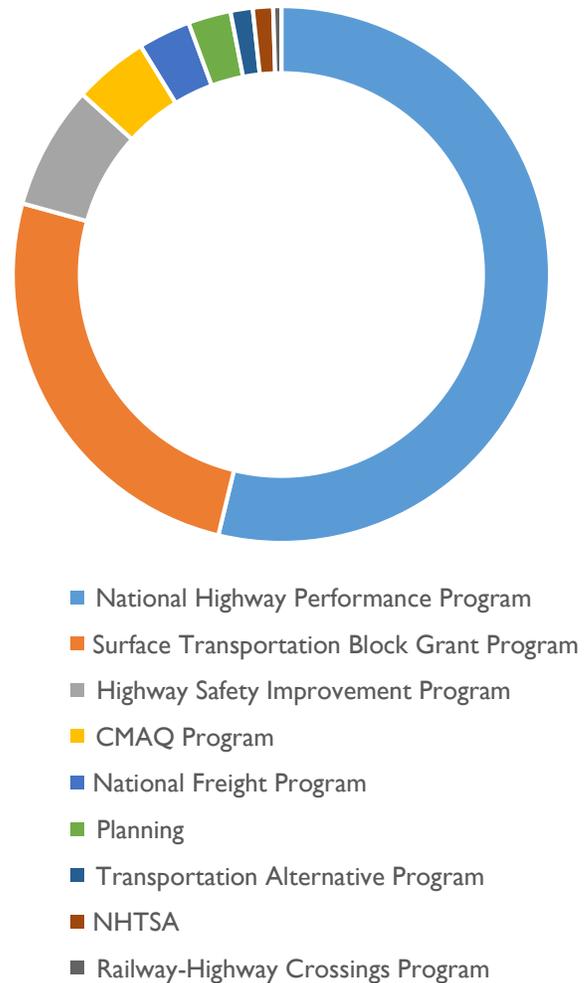

- Construction, reconstruction, resurfacing, restoration, rehabilitation, and preservation of, and operational improvements for, a federal-aid highway not on the NHS, and construction of a transit project eligible for assistance under chapter 53 of title 49, if the project is in the same corridor and in proximity to a fully access-controlled NHS route, if the improvement is more cost-effective (as determined by a benefit-cost analysis) than an NHS improvement, and will reduce delays or produce travel time savings on the NHS route and improve regional traffic flow;
- Non-NHS highway bridges that are on a federal-aid eligible highway;
- Bicycle transportation and pedestrian walkways;
- Highway safety improvements on the NHS;
- Capital and operating costs for traffic and traveler information, monitoring, management, and control facilities and programs;
- Development and implementation of a State Asset Management Plan for the NHS including data collection, maintenance and integration, software costs, and equipment costs;
- Infrastructure-based ITS capital improvements;
- Environmental restoration and pollution abatement;
- Control of noxious weeds and establishment of native species;
- Environmental mitigation related to National Highway Performance Program (NHPP) projects; and
- Workforce development, training, and education activities.

### Surface Transportation Block Grant

The Surface Transportation Block Grant (STBG) program encompasses what was formerly included in the STP (Surface Transportation Program), but the program has been renamed to more fully reflect its purpose and intent. This program has the most flexible eligibilities among all federal aid highway programs. Eligible activities include most items eligible under NHPP and also includes:

- Capital costs for transit projects eligible for assistance under chapter 53 of title 49, including vehicles and facilities used to provide intercity passenger bus service;
- Carpool projects, fringe and corridor parking facilities and programs, including electric and

Figure 2: Highway Federal Funding Sources

natural gas vehicle charging infrastructure, bicycle transportation and pedestrian walkways, and ADA sidewalk modification;

- Highway and transit safety infrastructure improvements and programs, installation of safety barriers and nets on bridges, hazard eliminations, mitigation of hazards caused by wildlife, railway-highway grade crossings;
- Highway and transit research, development, technology transfer;
- Surface transportation planning;
- Intersections with high accident rates or levels of congestion;
- Congestion pricing projects and strategies, including electric toll collection and travel demand management strategies and programs;
- Recreational trails projects;
- Construction of ferry boats and terminals; and

- Truck parking facilities.

There are two set-asides within the STBG program: a 2% set-aside for state planning and research (SPR) and a portion dedicated to the transportation alternatives projects. These funds described below and are not rolled up into this category.

### Surface Transportation Block Grant – Set Aside (Transportation Alternatives)

The FAST Act eliminates the MAP-21 Transportation Alternatives Program (TAP) and replaces it with a set-aside of Surface Transportation Block Grant (STBG) program funding for transportation alternatives (TA). These set-aside funds include most projects and activities that were previously eligible under TAP, such as pedestrian and bicycle facilities, recreational trails, safe routes to school projects, community improvements such as historic preservation to transportation facilities and vegetation management, and environmental mitigation related to stormwater and habitat connectivity.

Unless the state opts out, an amount equal to the 2009 allocation for Recreational Trails must be set aside out of TA funds each year. Rhode Island has not chosen to opt out, therefore will allocate annual funding to the state Recreational Trails Program, which is administered by the Rhode Island Department of Environmental Management (RIDEM).

### Highway Safety Improvement Program

According to FHWA, the FAST Act continues the Highway Safety Improvement Program (HSIP) to achieve a significant reduction in traffic fatalities and serious injuries on all public roads, including non-State-owned

public roads and roads on tribal lands. The HSIP requires a data-driven, strategic approach to improving highway safety on all public roads that focuses on performance. The HSIP category, under the FAST Act, is limited specifically to infrastructure improvements (as opposed to educational activities), but still allows for training and workforce development. In addition, 2% is set aside for State Planning and Research (SPR) activities, and a portion must be allocated to Railway Highway Crossings. Both SPR funds and Railway Highway Crossing funds are shown as separate sources.

### Railway Highway Crossings Program – HSIP Set Aside

The Railway Highway Crossings Program (Railway Program) provides funds to reduce fatalities, injuries, and crashes at grade crossings where railways and highways intersect. Rhode Island spends a limited amount of funding on this program each year, largely due to the fact that there are a very limited number of eligible grade crossings in the state.

### Planning

FHWA funding is specifically set aside for each state to conduct the metropolitan and statewide planning activities needed to support development of the long range transportation plan and transportation improvement programs, and to conduct state transportation planning and research activities. Statewide Planning is funded by set-asides from NHPP, STPG, CMAQ, and HSIP programs (2% of each). Metropolitan Planning is funded through a calculation based on the relative size of the state's FY 2009 Metropolitan Planning apportionment. This funding comes from FHWA to RIDOT and is then sub-allocated to the MPO, which includes the State Planning Council and its staff, the Rhode Island Statewide Planning Program.

### Congestion Mitigation Air Quality

The FAST Act continues the Congestion Mitigation Air Quality (CMAQ) program to provide a flexible funding source to state and local governments for transportation projects and programs that help meet the requirements of the Clean Air Act. Funding is available to reduce congestion and improve air quality for areas that do not meet the National Ambient Air Quality Standards (NAAQS) for ozone, carbon monoxide, or particulate matter (nonattainment areas) and for former nonattainment areas that are now in compliance (maintenance areas). In addition, those states that have no nonattainment or maintenance areas still receive a minimum apportionment of CMAQ funding for

Image 5: MBTA Train at TF Green Station

credit: RIDOT

either air quality projects or other elements of flexible spending. Currently Rhode Island is in attainment for all NAAQS under the Clean Air Act. The FAST Act has also added eligible project categories, such as vehicle to infrastructure communications equipment. Rhode Island uses CMAQ funds to pay for MBTA Commuter Rail operating expenses and RIPTA's bus rapid transit, the R-Line. Both services were specifically allowed, by federal statute, to continue to use CMAQ funds to subsidize the operation of these services beyond the three years normally allocated to a transit demonstration project.

### **National Highway Freight Program**

According to FHWA, the National Highway Freight Program (NHFP) funds must contribute to the efficient movement of freight on the National Highway Freight Network and be identified in a freight investment plan included in the state's freight plan (required in FY 2018 and beyond). This is a new program under the FAST Act. In addition, a state may use not more than 10% of its total NHFP apportionment each year for freight intermodal or freight rail projects. Eligible uses of program funds include:

- Development phase activities, including planning, feasibility analysis, revenue forecasting, environmental review, preliminary engineering and design work, and other preconstruction activities;
- Construction, reconstruction, rehabilitation, acquisition of real property (including land relating to the project and improvements to land), construction contingencies, acquisition of equipment, and operational improvements directly relating to improving system performance;
- Intelligent transportation systems and other technology to improve the flow of freight, including intelligent freight transportation systems;
- Efforts to reduce the environmental impacts of freight movement;
- Environmental and community mitigation for freight movement;
- Geometric improvements to interchanges and ramps;
- Truck-only lanes;
- Climbing and runaway truck lanes;
- Adding or widening of shoulders;
- Truck parking facilities eligible for funding under section 1401 (Jason's Law) of MAP-21;

- Real-time traffic, truck parking, roadway condition, and multimodal transportation information systems;
- Electronic screening and credentialing systems for vehicles, including weigh-in-motion truck inspection technologies;
- Traffic signal optimization, including synchronized and adaptive signals;
- Work zone management and information systems;
- Highway ramp metering;
- Intelligent transportation systems that would increase truck freight efficiencies inside the boundaries of intermodal facilities;
- Additional road capacity to address highway freight bottlenecks;
- Physical separation of passenger vehicles from commercial motor freight;
- Enhancement of the resiliency of critical highway infrastructure, including highway infrastructure that supports national energy security, to improve the flow of freight;
- A highway or bridge project, other than a project described above, to improve the flow of freight on the National Highway Freight Network;
- Any other surface transportation project to improve the flow of freight into and out of an eligible intermodal freight facility;
- Diesel retrofit or alternative fuel projects under CMAQ for class 8 vehicles; and
- Conducting analyses and data collection related to the NHFP.

### **National Highway Traffic Safety Administration**

National Highway Traffic Safety Administration (NHTSA) funds are limited to implementation of counter-measures to address driver behavioral issues with the goal of reducing the frequency and severity of motor vehicle crashes in the following general program areas based on the state's data-driven problem analysis:

- Occupant Protection (seatbelt and child restraint use);
- Impaired Driving (drunk and/or drugged driving);
- Speed Management;
- Distracted Driving (texting and/or mobile electronic device use);

- Young Drivers (Graduated Drivers' Licensing [GDL] systems);
- Older Drivers;
- Motorcyclists;
- Pedestrians; and
- Traffic Records Data Systems (projects designed to improve data linkage and the timeliness, accuracy and completeness of traffic records).

The basic Highway Safety Grant to the State (Section 402) is formula funding based 75% on population and 25% on roadway miles, with a minimum allocation. Rhode Island is a minimum allocation state. These funds may be used for any eligible purpose.

There are also a number of incentive grants (Section 405) the state may qualify for in the following program areas if it meets NHTSA's established eligibility: Occupant Protection, Impaired Driving, Ignition Interlock (drunk driving), Traffic Safety Information Systems, Distracted Driving, Motorcyclist Safety, and GDL. These funds are limited to specific uses as prescribed by NHTSA through its rulemaking process. The FAST Act added a Pedestrian Safety Incentive Grant for which Rhode Island may also apply.

In general, NHTSA funds may not be used for capital projects. Instead, the funds are distributed to state and municipal agencies and non-profit Community Based Organizations through a competitive grant application process. A small share of the total funds is paid to consultants for services such as media buying and seatbelt and impaired driving attitudinal surveys, along with assistance in developing the yearly required Highway Safety Performance Plan and Annual Evaluation Report. In addition, a limited percentage of funds (Section 402 – Planning and Administration) are used to cover the operating costs of the State Highway Safety Office.

## **Transit Funding (FTA)**

The Federal Transit Administration (FTA) provides funds through a variety of programs that support capital investments and select transit services. Funds are distributed by Urbanized Area, Non-Urbanized Area, or to the state as a whole. When multiple agencies operate in the same Urbanized Area, funds must be split through an agreement among the eligible transit agencies. In the Providence, RI - MA Urbanized Area, funds are divided between RIPTA, RIDOT, Greater Attleboro Taunton Regional Transit Authority (GATRA), Massachusetts Department of Transportation and the

Southeastern Regional Transit Authority (SRTA), which serves 10 communities in Southeastern Massachusetts. In the Norwich, New London, CT-RI Urbanized Area, funds are divided between RIPTA and the Connecticut Department of Transportation. Factors influencing the amount of money available include census data such as population and size as well as operating data, such as efficiency of transit operations, mileage, and passengers served. Rhode Island is eligible for a "density bonus" to its programs through the Section 5340 program, which augments several formula programs. That additional funding is included with the formula funding and not as a separate category of funding.

## **Description of Sources**

### **Urbanized Area Formula (5307 & 5340) - RIPTA**

Urbanized Area Formula (Section 5307) funds are apportioned by Urbanized Area (UZA). Funds can be used for vehicle purchases, facility upgrades, maintenance, transit planning, and, to defray a portion of the cost of providing required ADA complementary paratransit service. Additionally, ½ of 1% of the authorization may be used for training expenses. This program funds approximately 80% of RIPTA's maintenance program as well as most capital investments. The Growing State and High Density States Formula Program (5340) apportions additional funds to the Urbanized Area Formula Program. Rhode Island qualifies for these additional funds.

### **Enhanced Mobility for Adults and People with Disabilities (5310) - RIPTA**

Enhanced Mobility for Adults and People with Disabilities (Section 5310) funds are apportioned by Urbanized Area (UZA). In addition, a small amount of funds are apportioned by state. Eligible projects must support transportation for the elderly and disabled.

### **Nonurbanized Area Formula (5311 & 5340) - RIPTA**

Nonurbanized Area Formula (Section 5311) funds are apportioned to a designated recipient for each state in order to support transit service in rural areas and to make connections between rural areas and cities. Priorities are established through the State Management Plan. In Rhode Island, funds have typically been used to support rural service at a 50% federal share. The Growing State and High Density States Formula Program (5340) apportions additional funds to the Nonurbanized Area Formula Program. Rhode Island qualifies for these additional funds.

**Rural Transportation Assistance Program (5311(b)(3)) - RIPTA**

Rural Transportation Assistance Program Section 5311(b)(3) (RTAP) funds are apportioned to a designated recipient for each state in order to fund technical support for rural service providers. Priorities are established through the State Management Plan. In Rhode Island funds have typically been used to provide technical support for transit use to rural areas but with an ancillary benefit to the transit system at large. Eligible expenses can be reimbursed at 100%.

**High Intensity Fixed Guideway (5337) - RIDOT**

The High Intensity Fixed Guideway (Section 5337) program funds are apportioned by the UZA. This program provides capital assistance for maintenance, replacement, and rehabilitation projects of existing high intensity fixed guideway and high intensity motorbus systems to maintain a state of good repair. Additionally, funding is eligible for developing and implementing Transit Asset Management plans. This program provides funding for the following fixed guideway transit modes: Rapid rail (heavy rail), commuter rail, light rail, hybrid rail, monorail, automated guideway, trolleybus (using overhead catenary), aerial tramway, cable car, inclined plane (funicular), passenger ferries, and bus rapid transit. Training and workforce activities authorized under 49 U.S.C. 5314(b) and (c) are eligible for these funds.

**Bus and Bus Facilities Formula (5339) - RIPTA**

Bus and Bus Facilities Formula (Section 5339) funds are apportioned by UZA. In addition, a state grant of \$1.75 million per state has been created through the FAST Act. These funds are combined and can be used for the purchase of vehicles, bus-related equipment, and for bus facilities. Rhode Island anticipates receiving enough annually to support approximately 1/3 of the replacement cost of vehicles at current service levels.

**Planning (5303 & 5304) - RIDOT**

Metropolitan Planning (5303) and Statewide Planning (5304) funds are apportioned to states by a formula that includes each state's urbanized area population in proportion to the total urbanized area population for the nation, as well as other factors. The metropolitan funds are then sub-allocated by states to MPOs. Since Rhode Island has only a single MPO, the metropolitan planning funds are all sub-allocated to its only MPO. Funds are provided to ensure that each state and metropolitan area meets the procedural requirements for multimodal transportation planning that is cooperative, continuous, and comprehensive, resulting in long-range plans and

Figure 3: Transit Federal Funding Sources

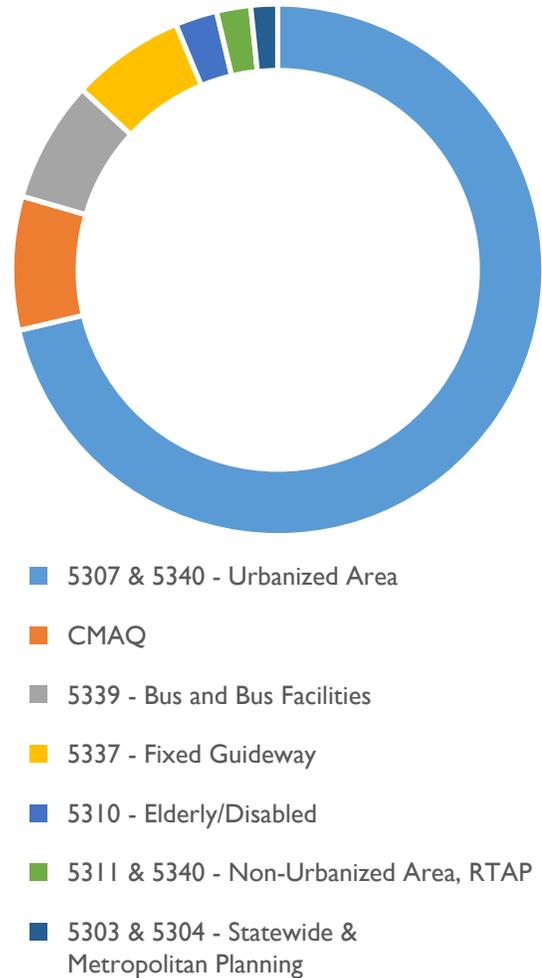

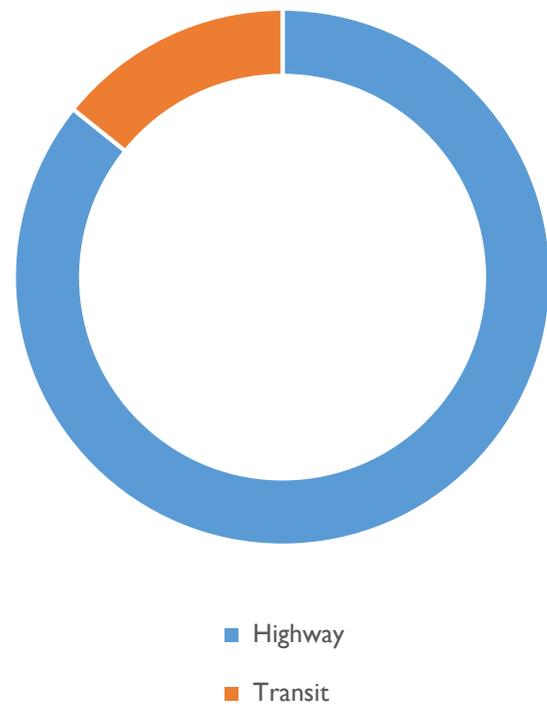

Figure 4: Highway - Transit Federal Funding Split

short-range programs of transportation investment priorities.

### Federal Budgetary Holdback

Based on years of data, Rhode Island categorizes approximately 3% of FHWA funds apportioned to Rhode Island as likely to be held back by Congress due to spending limitations or reduction of revenue estimates. While the FAST Act provides authorization for expenditures up to a certain cap (maximum) for specific programs, it must be paired with appropriations legislation that details the funding sources, and allows FHWA to set obligation limitations for categories of funding, based on certain assumptions about actual receipts. The authorization is a high-level estimate of funding, while obligation limitation is based on detailed analysis. The average difference between these two amounts is 3%, which is accounted for within the FY 17-25 STIP. This issue does not apply to Federal Transit Administration funds, which are made available in grants after official apportionments have been published.

## State Funding

### Description of Sources

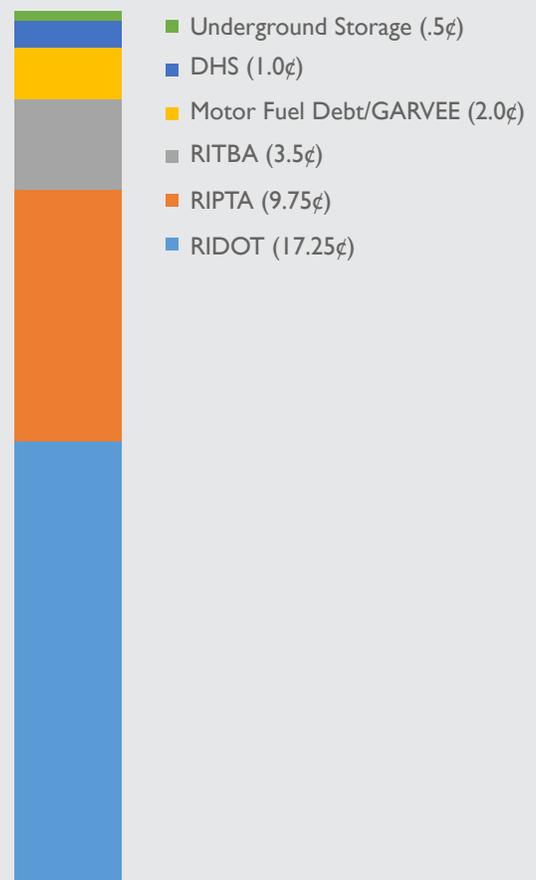

#### Gas Tax – RIDOT/RIPTA

Rhode Island’s gas tax was \$0.34 per gallon in FY 2016. This amount is scheduled to increase in even fiscal years based on indexing for inflation, which was included in the funding sources for the Highway Maintenance Account. The gas tax is divided between six recipients as outlined in Figure 5: Gas Tax Recipients.

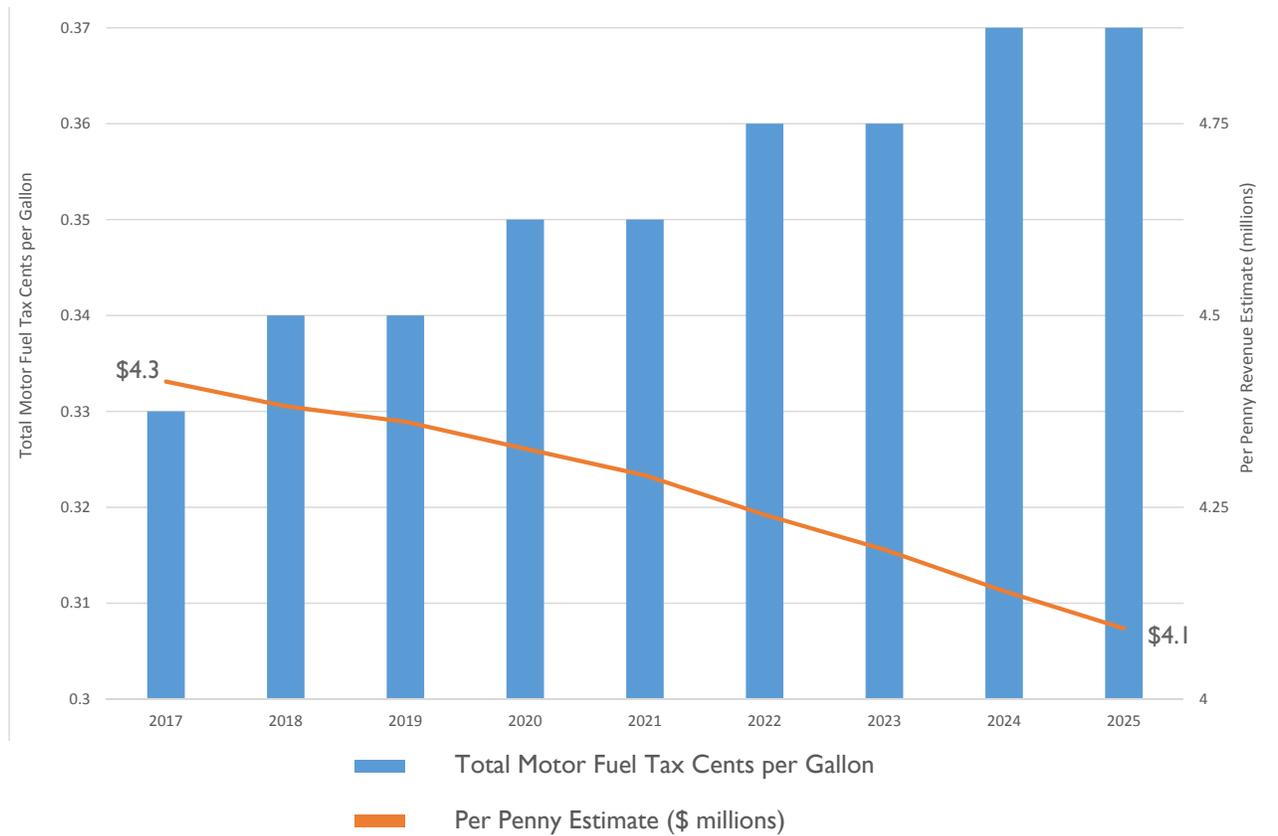

**The distribution of the gas tax is set by statute and cannot be diverted to the General Fund, or for other purposes.** Projections of gas tax revenue are revised semi-annually at the Revenue Estimating Conference. Currently, one penny of gas tax generates approximately \$4.3 million in revenue. The state’s long-term projections show a declining revenue over time. By 2025, it is estimated that one penny of gas tax will generate only \$4.1 million in revenue.

Figure 5: Gas Tax Recipients

- **Underground Storage - .5 cents;** a half penny is allocated to the Underground Storage Tank fund and is intended to finance a loan fund that allows fuel tank owners to replace their tanks to prevent or remediate leaks
- **DHS – 1.0 cents;** the Department of Human Services receives one penny for the RIDE program, which provides transportation to the elderly and disabled
- **Motor Fuel – 2 cents;** set aside by statute to pay the Motor Fuel Bond (the state share tied to the 2003, 2006, and 2009 GARVEE authorization)
- **RITBA - 3.5 cents;** to eliminate tolling on the Sakonnet River Bridge, the General Assembly transferred 3.5 pennies of gas tax to RITBA to meet capital and maintenance needs
- **RIPTA – 9.75 cents**
- **RIDOT – 17.25 cents**

**Figure 6: Gas Tax Yield Per Penny FFY 2017 - 2025**

**Rhode Island Capital Plan – RIDOT/RIPTA**

The Rhode Island Capital Plan (RICAP) fund is an account that receives any revenues in excess of the 95% of state revenue upon which the Governor is required to build the annual budget. RICAP funds are restricted to capital projects only and are constitutionally prohibited from use for debt service payments. RICAP funding has been allocated to a range of RIDOT projects, including a new Portsmouth maintenance facility, salt storage, and capital asset protection for RIDOT’s seven maintenance districts and headquarters. The state may also allocate a portion of RICAP funds towards RIPTA capital projects. In the past, RICAP funding has been used as match for facilities projects, including security improvements. RIPTA is currently requesting RICAP funds as match for vehicle replacements.

The Highway Maintenance Account (HMA) section will also discuss RICAP, since state funds to match the federal program, deposited to the HMA, include additional RICAP dollars.

**Rhode Island Highway Maintenance Account – RIDOT**

In the past, the State had matched Federal Highway funds with General Obligation bonds. This \$40 million

annual expenditure was approved by the voters and is in addition to the match of the Federal funds needed for Indirect GARVEE debt service (Motor Fuel Revenue bonds). During the 2011 General Assembly session, the Legislature passed Article 22 of the FY 2012 Budget as Enacted, which allocated an increase in vehicle registration fees and license fees. During the 2013 General Assembly session, some technical corrections were made to the language and the separate Trust Fund was converted to an account within the Intermodal Surface Transportation Fund (ISTF), the Highway Maintenance Account (HMA).

Driver’s license fees and registration fees increased for all vehicles, phased-in over a 3-year period which began on July 1, 2013. The increase is deposited into the HMA. Two-year registrations and driver’s licenses each increased by \$30 (\$10 per year for three years), while one-year registrations increased by \$15 (\$5 per year for three years). In addition to the fee increases, RICAP funding has been allocated to supplement the revenue generated by the new fees so that no further bond authorizations will be needed to match Federal Highway dollars.

Article 21 of the FY 2015 Budget as Enacted provided future additional revenue for transportation infrastructure and maintenance funding, ranging from \$30 million in FY 2017 to nearly \$80 million over current levels in FY 2024. Article 21 made a number of specific changes to transportation-related fees and deposited additional revenue into the HMA.

The FY2015 Budget as Enacted specifically:

- Eliminated the authority of the Rhode Island Turnpike and Bridge Authority (RITBA) to toll the Sakonnet River Bridge, but did not return the Sakonnet and Jamestown Bridges to RIDOT;
- Transferred 3.5 pennies of the gas tax (an estimated \$14.5 million annually) to the RITBA for maintenance of the four-bridge East Bay Bridge System;
- Transferred various new and increased motor vehicle associated revenues to the HMA, including an increased vehicle inspection fee;
- Phased-in a transfer of all existing motor vehicle registration and license fees from the General Fund to the HMA, beginning in FY 2015;
- Provided for indexing of the motor fuel (gasoline) tax on a biennial basis, beginning in FY 2015, using the Consumer Price Index for Urban Consumers (CPI-U);
- Included language allowing for the more flexible use of the HMA (which was initially established in 2011 to provide the non-bonded match to the Federal program) for “programs designed to eliminate structural deficiencies of the state’s bridge, road and maintenance systems and infrastructure.”; and
- Allocated 5% of the Highway Maintenance Account collections for RIPTA operating expenses.

### **Prior Year Funding**

Prior Year Funding is state funding source made up of a combination of funding from sources such as the gas tax, highway maintenance account, and RICAP funds that were originally budgeted for other projects but not used as originally planned. Going forward, this funding source will disappear, as the TIP is updated annually.

### **Land Sales Proceeds - RIDOT**

#### *All Other Land*

When land that has been purchased by RIDOT using federal funds (whether all or part of the purchase) is sold, the proceeds of the sale must be used for projects that would otherwise be eligible for federal funds. Land sales funding cannot be used for operating costs or projects that wouldn’t qualify for federal reimbursement. Most of the non-infrastructure property held by RIDOT includes rights-of-way, purchased for materials storage or access for a large-scale project. Unless purchased with 100% state funds or restricted receipts, land sales money must be used for Title 23 eligible projects. Historically, RIDOT has generated less than \$1.0 million in land sales revenue annually.

### **GARVEE Bonds**

In 2003, 2006, and 2009, five major projects were funded through Motor Fuel Revenue bonds and Grant Anticipation Revenue Vehicle bonds (Indirect GARVEEs). The State, through the then Economic Development Corporation, issued \$680 million in combined funding to advance implementation of five major transportation projects.

- I-195 Relocation
- Washington Bridge
- Sakonnet River Bridge
- Phase II of the Quonset Access Road (Route 403)
- Freight Rail Improvement Program

GARVEE bonds are considered a method of innovative financing and are not backed by the full faith and credit of the State, but rather by future federal transportation funds allocated to Rhode Island. The annual federal highway apportionments provided to Rhode Island have been used to pay GARVEE bond debt service. GARVEE bond debt service payments have been programmed in the STIP. The FFY 2017 - 2025 STIP includes two GARVEE debt issuances: the existing GARVEE debt, which will be refinanced to extend the original term by three years, and a new GARVEE bond. Both the refinancing and the new bond will make funds immediately available to support the necessary surge in bridge replacement, reconstruction, and maintenance that ultimately will save the state millions of dollars in future bridge repair and replacement costs.

The existing GARVEE debt was scheduled to extinguish in FFY 2021. However, in order to free up the \$120 million in federal funds that would have been programmed to pay GARVEE debt service, the remaining GARVEE bonds will be refinanced and debt service payments extended through FFY2024. This is not new funding, but rather, a shift of federal GARVEE debt service payments to future years in order to gain available federal funding in the near term.

In February 2016, the General Assembly enacted legislation that would allow RIDOT, acting through the Rhode Island Commerce Corporation, to issue an additional \$300 million in Indirect GARVEE bonds. This initiative was made possible due to the passage of the FAST Act and the resulting increase in FHWA funding apportioned to Rhode Island. The debt is expected to be structured over 15 years with interest-only payments in the first nine years. The new GARVEE may be a hybrid of direct GARVEEs (project-specific) and indirect GARVEEs (projects chosen from a menu of options), much like Massachusetts with its \$1.1 billion GARVEE for an Accelerated Bridge Program. The planned use of funds would involve payment of toll bridge costs with GARVEE proceeds (state funds) and repayment of the GARVEE proceeds with toll revenue/revenue reimbursed by tolls, to ensure that toll revenue/revenue reimbursed by tolls, in fact, will pay for the bridges associated with each gantry.

#### **Toll Revenue/Revenue Reimbursed by Tolls – RIDOT**

Based on a Level II traffic study conducted by a consultant, in conjunction with in-house review and research, RIDOT estimates annual gross toll revenue/revenue reimbursed by tolls to be approximately \$44.8 million. Operating costs for the toll facilities are estimated to be about 5% of the annual revenue, or \$2.4 million of a full year's collections. Tolling is anticipated to start in the late fall of 2017 (FFY 2018), but will not start with all gantries in place; all tolls should be in operation six months after the initial tolling begins.

#### **Toll Credits – RIDOT**

Federal regulations (23 USC §120) allow a state to use toll credits toward the non-federal match requirement of a project, provided that the project is listed in the STIP. These credits are based on toll revenue/revenue reimbursed by tolls that are generated and used by public, quasi-public, and private agencies to build, improve, or maintain highways, bridges, or tunnels that serve the public purpose of interstate commerce. In Rhode Island, RITBA expenditures have been used

as the basis of increasing the federal share of RIDOT projects. Beginning in FFY 2018, the state will also be able to accrue toll credits for toll revenue expended on qualifying transportation infrastructure. Consistent with existing practices, the STIP does not identify the use of toll credits for specific projects nor does it assume the use of toll credits in the financial constraint analysis. RIDOT will coordinate with FHWA to use toll credits on a case by case basis in any of the STIP years.

The Annual Toll Credit Overview table (shown to the right) outlines the planned use of toll credits, along with the projected toll credits generated, in each year through FY2020. We have also included FY2014 and FY2015 to show the accrual and flow of toll credits in the program. The table illustrates the opening balance (at the start of the fiscal year) of toll credits, the credits drawn down (subtracted from balance), and new credits generated by both the Rhode Island Turnpike and Bridge Authority (RITBA) and RIDOT in that fiscal year. The end of year balance becomes the opening balance in the following year.

The Federal Program Matches table illustrates the RIDOT Federal program and the ways in which the Federal funds are matched: GARVEE debt service requires no match (motor fuel bonds are paid separately, by law), the hard matched line is the amount matched by state funds, and the toll credit matched line shows how much of the program will be funded at 100% Federal (thereby using the toll credits to allow for increased Federal share). The bottom line shows the toll credits needed in that year: it's the same as the toll credits used, in the upper portion, but in the bottom portion of the table shows how the need is calculated.

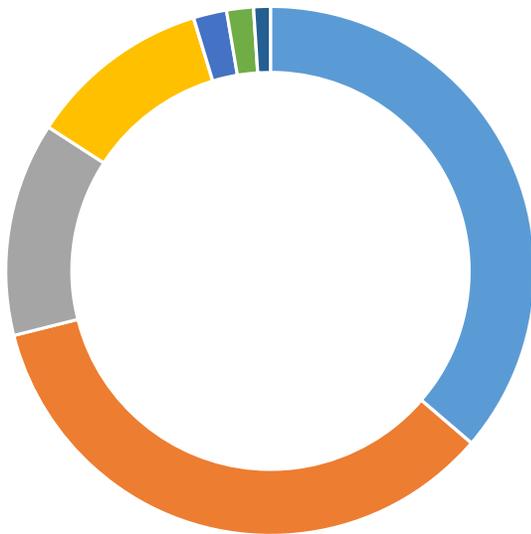

#### **Transit Bond**

In November 2014, Rhode Island voters approved \$35.0 million for Mass Transit Hub Infrastructure. Approval of this bond authorized the State of Rhode Island to issue general obligation bonds, refunding bonds, and temporary notes in an amount not to exceed thirty-five million dollars (\$35,000,000) to fund enhancements and renovations to mass transit hub infrastructure throughout Rhode Island to improve access to multiple intermodal sites, key transportation, healthcare, and other locations.

#### **Paratransit Revolving Loan Fund**

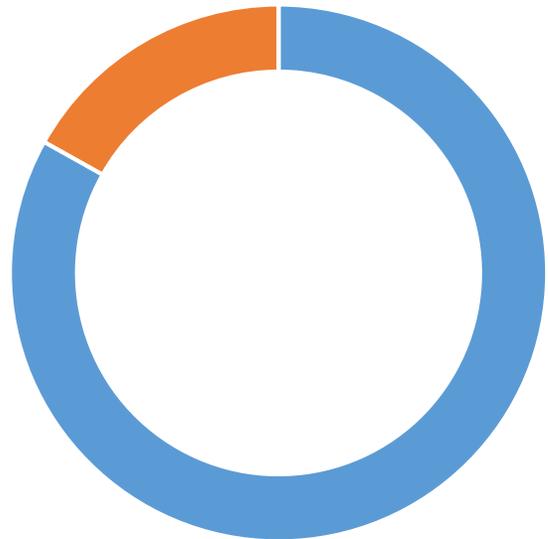

The Paratransit Revolving Loan Fund is a pool of money funded via a fee charged to all agencies with clients being transported on a per trip fee basis (non-ADA trips) in the

\*projected

RIde program. The fund is used as match on paratransit vehicle purchases. Formerly, the fund was used to match various capital projects related to the RIde program, but due to the decrease in non-ADA trips the fund is used only for vehicle purchases.

### **Project Closeout**

Project closeout includes funds from prior years that were previously obligated to projects, but as the projects are audited, retainage is paid, and project accounts closed, there is a positive balance remaining. This balance may then be applied to other projects.

### **Contingency/Inflation**

For the first time, the STIP includes a line item for contingency and inflation. Although interest rates have remained at a historic low, it is likely that some construction costs will increase over time. It is also likely that at some point during the FFY 2017 to FFY 2025 period there will be unanticipated repair or replacement costs for one or more transportation assets. The total allocated to Contingency/Inflation is less than 2% of total ten-year expenditures but has been set aside to address these unplanned expenses.

## PROGRAM DESCRIPTIONS

### BRIDGE MAINTENANCE

Bridge Maintenance is one of the key's to stabilizing Rhode Island's bridge condition. One of the largest shifts that has been occurring statewide is the migration of transportation infrastructure planning to an asset management based system of planning, which increases the emphasis on preservation and maintenance to keep assets in good condition, avoiding more expensive long term costs. The activities in this category work to keep the bridge assets in a state of good repair.

#### Bridge Inspection

Rhode Island has approximately 1,200 structures classified as either National Bridge Inventory (NBI) or Non-NBI per the Code of Federal Regulations, Title 23, Part 650, Subpart C: the National Bridge Inspection Standards-(NBIS). The NBIS sets the national standards for the safety inspection and evaluation of all highway bridges in accordance with 23 U.S.C. 151. An NBI bridge is classified as a structure that carries traffic and has an opening measured along the center of the roadway of more than 20 feet between under copings of abutments or spring lines of arches. Non-NBI bridges are the bridges that do not satisfy the NBI definition. The RIDOT Bridge Inspection Unit is responsible to inspect these structures in accordance with federal and state regulations.

#### Expansion Joint Cleaning/Spot Painting

Routine maintenance and operations is periodically scheduled on all state owned and operated bridges. Typical operations are deck and expansion joint repairs, preservation work, and providing traffic control.

#### Bridge Permits

Oversized and overweight (OS/OW) permits continuously come into RIDOT from the Rhode Island Division of Motor Vehicles (RIDMV) (typically an average of 25 OS/OW permit requests per day) for review and approval. These permits must be addressed right away. Each permit addresses specific truck configurations and typically requires use of specific routes. RIDOT is responsible to analyze and coordinate the specific routes for OS/OW trucks by evaluating the impact on our state's bridge structure to ensure safe travel.

#### Program Funding and Structure

The routine operations of bridge maintenance are typically funded entirely with state funds.

### Project Criteria and Selection

RIDOT maintains discretion over the bridge maintenance program as they prioritize needed repairs based on bridge inspections.

### PAVEMENT MAINTENANCE

Rhode Island has approximately 6,528 miles of roadway, and RIDOT maintains approximately 1,100 of those miles of roadway.

#### Pavement Preservation

Pavement preservation is the practice of extending the service life of roadways by making a pavement surface less permeable to reduce water penetration through cracks which weakens the foundation soils and deteriorates the pavement. The current RIDOT pavement preservation treatments include crack sealing, asphalt rubber chip sealing, and modified asphalt thin overlays. Treatments may be applied individually or in combination with each other.

#### Crack Sealing

Crack sealing, a relatively inexpensive operation, is the first line of defense in pavement preservation. RIDOT uses a rubberized asphalt liquid to seal open joints and cracks. RIDOT seals an average of 52 lane miles annually.

#### Asphalt Rubber Chip Seal

Asphalt Rubber Chip Seal consists of a rubber modified asphalt binder and a high quality, uniformly graded, plant coated aggregate that is applied on severely cracked roads. It acts primarily as a waterproofing membrane to prevent inflowing water from severely damaging the pavement foundation. Chip sealing is another roadway preservation method that can be done at a lower cost than resurfacing. RIDOT chip seals 12 lane miles annually. The average life of a chip seal is 10 years.

#### Paver Placed Elastomeric Surface Treatment (PPEST)

PPEST is a 1" thick, gap graded thin overlay hot mix which uses an asphalt cement that has been modified with either rubber, polymer or both. The modified asphalt cement is used to greatly improve the mix's flexibility resulting in a more crack resistant pavement. RIDOT annually overlays 10 lane miles of pavement. The life span of a PPEST is approximately 9 years.

## Program Funding and Structure

Each year, RIDOT invests approximately \$5 million dollars towards the Pavement Preservation preventive maintenance program. The program is managed by the Materials and Quality Assurance Section. This program is funded through a combination of state and federal funds.

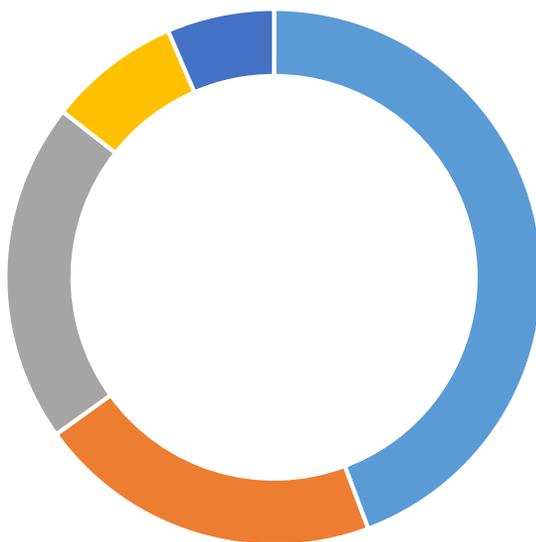

## Project Criteria and Selection

Selection of candidates for the various treatments is conducted through a blend of automated pavement distress data collection and visual pavement condition inspections carried out by a Materials section Engineer. The collected data is entered into a GIS program which is maintained by Materials' personnel. No permitting is typically required for the various treatments. RIDOT maintains discretion over the projects addressed through the pavement preservation program.

## TRAFFIC SAFETY MAINTENANCE

The RIDOT Traffic Safety Maintenance Program handles damaged safety equipment that must be repaired or replaced, or the resulting loss in the margin of safety can contribute to, or worsen, the consequences of a crash.

Figure 9: RIDOT Operating Budget Sources FFY 2017

- RI Highway Maintenance Account
- Surface Transportation Program
- Gas Tax
- Nat. Highway Performance Program
- CMAQ

Activities and projects supported through RIDOT's Traffic Safety Maintenance Program include the following:

- *Signage, Lighting Repair* - Repair or replacement of non-functioning or older highway lighting fixture systems with newer light-emitting diode (LED) systems which delivers energy savings, reduces maintenance costs, and provides improved illumination on highways. Also included is the replacement of older, faded ground mounted and overhead mounted guide signs with brighter and more visible signs and replacement of signs that are at the end of their service life or that do not comply with federal reflectivity requirements.
- *Permits* - RIDOT staff review permits related to Physical Alteration Permits (PAP), utility work in state roadways, traffic controls, and signage.
- *Immediate Action* - The Rhode Island Strategically Targeted Affordable Roadway Solutions (RI\*STARS) program focuses on rapidly delivering low-cost and high benefit safety and mobility improvements. This involves the funding of small unanticipated and quick actions necessary to improve traffic flow or highway safety. Short-term proposed improvements can be quickly implemented through work-orders to maintenance personnel or on-call design/construction contracts on an as needed basis.
- *Statewide Pavement Striping* - Refresh and improve the visibility of lane lines on state roads in Rhode Island.

## Program Funding and Structure

Traffic Safety Maintenance is funded through a combination of state and federal program funds. Federal funds generally come from the Surface Transportation Block Grant program or the Highway Safety Improvement Program (HSIP).

## Project Criteria and Selection

RIDOT maintains discretion over the Traffic Safety Maintenance as they maintain existing broken, damaged, or in need of repair safety infrastructure.

## DRAINAGE MAINTENANCE

### Program Description

Drainage maintenance operations may be performed by the District offices within the Division of Highway & Bridge Maintenance or through the statewide Drainage Task Force. Typical operations include cleaning & flushing closed drainage systems, removing sediment/

debris from closed or open drainage systems, inspection of drainage systems and providing routine maintenance to storm water treatment units and other best management practices as required through municipal separate storm sewer systems (MS4) permitting.

**Program Funding and Structure**

Routine maintenance operations are funded with state funds; programmatic, scheduled operations may utilize federal funds.

**Project Criteria and Selection**

RIDOT maintains discretion over the drainage maintenance program as they prioritize needed repairs based on inspections and observed conditions in the field.

**MAINTENANCE OPERATIONS**

**Program Description**

Maintenance Operations include programs such as Winter Operations, Mowing and Roadside Maintenance, Sweeping, and Traffic Operations. Winter Operations makes up the single largest share of Maintenance Operations. Costs vary widely based on the number, timing, and duration of snow and ice events and the cost of sand and salt, in conjunction with personnel and contractor expenditures. In 2012, winter maintenance cost less than \$8.0 million, while in 2014, costs doubled. Part of the reorganization within RIDOT will concentrate more staff on bringing maintenance functions in-house, reducing the need to employ contractors for basic maintenance functions.

**Program Funding and Structure**

Funding for routine maintenance operations is provided with state funds.

**Project Criteria and Selection**

RIDOT maintains discretion over the maintenance operations as they prioritize needed maintenance based on observed conditions in the field.

**TRANSIT OPERATIONS**

**RIDOT Program Description**

**Commuter Rail Operations**

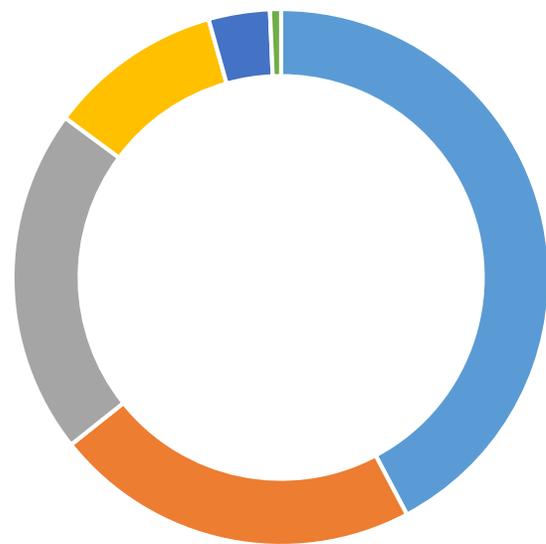

Through a partnership with the Massachusetts Bay Transportation Authority (MBTA), Rhode Island has commuter rail service from Boston with stops in

Providence, Warwick, and North Kingstown. The Providence Station is one of the busiest stops in the MBTA system. The state continues to work with MBTA to service stations at Warwick and North Kingstown so that commuter interest in these stations strengthens. The Providence Station offers 16 round trips per day carrying about 3,000 trips, the Warwick Station at T.F. Green Airport offers 10 round trips per day carrying about 400 trips, and the Wickford Junction Station in North Kingstown offers 10 round trips per day carrying about 400 trips. Major expenses to the State for this commuter rail service include an access fee to Amtrak’s Northeast Corridor, liability insurance, MBTA operations, station operations and marketing.

**Summer Service**

The state is anticipating the further development of limited season bus/rail/ferry services connecting major tourist attractions, recreational facilities and summer events along Narragansett Bay. It is anticipated that initial start-up service would be limited at select locations but could be expanded based on demand and usage.

Figure 10: RIPTA Operating Budget Sources FFY 2017

- Gasoline Tax Revenue
- Passenger Revenue
- Federal Reimbursements
- Other
- State Highway Fund Revenues
- Advertising

## Program Funding and Structure

Commuter Rail expenses, such as Amtrak access fee, liability insurance and station operations are funded with CMAQ funds. MBTA operations are funded with FTA High Intensity Fixed Guideway funds for capital improvements along the MBTA's Providence line in exchange for service. Summer service is funded with state funds.

## Project Criteria and Selection

As ongoing operating programs, projects are selected through the state guide plan planning process, including the Long Range Transportation Plan. Commuter rail service between Boston and Providence, and south of Providence were recommendations in the Long Range Transportation Plan. These transit operations are intended to compliment and/or supplement RIPTA bus services whereby RIPTA may be able to redirect their operations budget into other high bus-demand areas in the urbanized areas of the state.

## RIPTA Program Description

RIPTA has provided bus transit operations since 1966. RIPTA serves 35 of 39 Rhode Island communities and operates 7 days a week. In FY 2015, RIPTA provided 18.4 million passenger trips on 55 statewide fixed bus routes, complementary ADA Paratransit Service statewide and flex service. RIPTA administers the statewide RIDE program for seniors and people with disabilities and provides Park n' Ride Service at 32 sites around Rhode Island. While the majority of RIPTA's transit operations revolve around the operation of the fixed route bus system, funded mostly through passenger revenue and gasoline tax revenue, there are several programs related to operations that are specifically funded with federal dollars. Those programs are detailed below.

- *Planning, Outreach, Training* - This program supports RIPTA's long- and short- term transit planning efforts, including data collection and analysis, transit service evaluation, and execution of plans and studies programmed in the MPO's Unified Planning Work Program. Within certain limitations, federal funds can also be used for direct training expenses, such as safe driving, maintenance skills, and environmental compliance.
- *Mobility Management* - This program funds activities which support RIDE (paratransit) coordination and brokerage activities.

- *Service to Jobs and Training* - This program offsets the costs of providing fixed route service associated with the Jobs Access Reverse Commute program. These routes support urban residents commuting to jobs in lower density areas.
- *Transportation for Individuals with Disabilities* - This program funds a portion of the costs of service required under the Americans with Disabilities Act of 1990. RIPTA provides scheduled door to door paratransit service for qualified individuals on paratransit vans.
- *Rural Operations/Intercity Bus Connections/Rural Technical Assistance Program (RTAP)* - These programs defray half the cost of rural service as well as training, technical assistance and support services that benefit the rural areas of the state.

## Program Funding and Structure

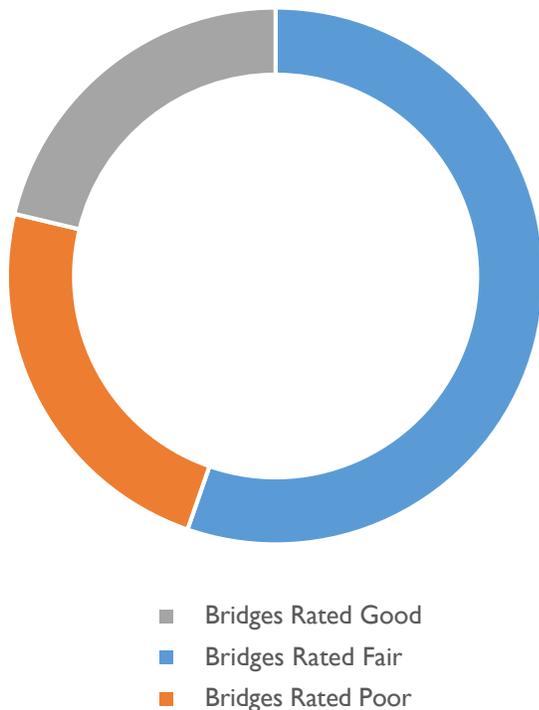

Transit operations are paid for with RIPTA operating funds, with additional support from federal programs when eligible. All federally reimbursable operating expenses have been projected through the time frame of the STIP using inflation estimates and planning values provided by the State Budget Office. Federal funds are made available through the federal apportionment process.

The bulk of RIPTA's operating budget is funded without federal assistance. Operations are supported by a combination of fare box revenue, state transportation funding, contract revenue and other revenue like advertising and leases. The major state contributions to the operating budget match are the Gasoline Tax, which is collected by the Division of Taxation with \$.0975 per gallon distributed to RIPTA. Projections are revised semi-annually at the Revenue Estimating Conference. RIPTA relies on the State's long-term projections, which assumes declining revenue over time. Beginning in 2016, the State has provided 5% of the State Highway Fund to the RIPTA. In 2016 the total expected is \$2.7 million, increasing gradually to \$4.4 million by 2018. The State has provided \$2.0 million in General Revenues as a one-time payment in 2016, and assumed the RIPTA's debt service since 2013.

## Project Criteria and Selection

Federal programs come with federal priorities and commitments; these requirements vary by program. Eligible projects are guided by the State Management Plan, which establishes criteria for soliciting project applications when warranted. Projects undertaken

Figure 11: Rhode Island Bridge Condition

directly by RIPTA, such as rural service program, are further vetted through the agency budgeting process, which includes development within a department, formal submission, cross-departmental review, submission to CEO, and approval by the RIPTA Board of Directors. The approved budget is submitted for inclusion with the State Budget and is revisited mid-year.

### TOLL FACILITIES OPERATIONS

The toll facilities authorized through the RhodeWorks legislation will not consist of any toll booths or plazas. Modern technology has changed the ability of states to place tolls without restricting traffic or requiring complicated construction, detours, or pull-offs. Large truck tolls in Rhode Island will consist of 14 toll locations. The tolls will be cashless, All Electronic Tolling (AET) with equipment mounted on overhead gantries. There will be no cash transactions or vehicle stopping allowed. Trucks without valid toll transponders will be billed for the charge using license plate identification equipment.

#### Program Funding and Structure

RIDOT intends to utilize the RITBA to perform the billing and collection services, due to the fact that RITBA has an established back office function for electronic toll collection. RIDOT will reimburse RITBA for operating costs incurred, estimated to be approximately 5% of annual projected toll collections.

Figure 12: Rhode Island Bridge Deck Area Condition Trends

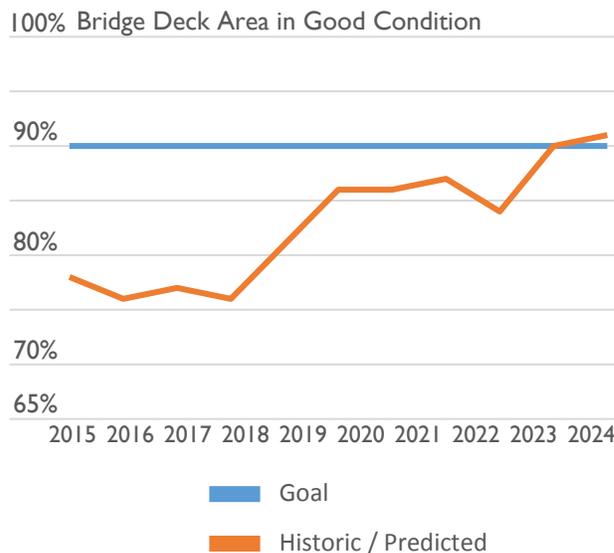

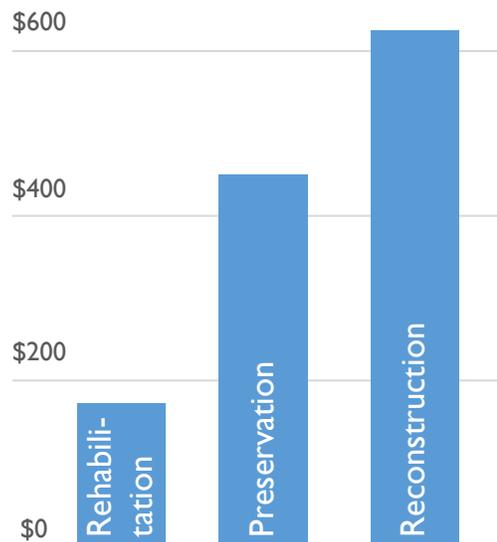

Figure 13: Bridge Repair Costs Per Square Foot

### RIDOT HEADQUARTERS OPERATIONS

Headquarters Operations encompasses the administrative functions at RIDOT. This includes, but is not limited to, such functions as the Director’s Office, Legal, Human Resources, Communications, Information Technology and Finance. The mission of these functional sections is to maintain a system of centralized program services, which promotes optimum utilization of departmental resources consistent with federal, state and departmental policies, objectives and procedures.

These functional units also provide the necessary support staff and systems needed to ensure efficient program services.

### Program Funding and Structure

Headquarters Operations is primarily funded through state sources. There are a limited number of personnel and operating costs associated with projects funded through federal sources that may also utilize federal funds, but most Headquarters Operations funding is derived from gas tax, highway maintenance account resources, and other state sources.

### DEBT SERVICE

Debt service is a significant expense, second only to bridge expenditures. Much of the debt service through FFY 2025 can be attributed to borrowing that occurred without a targeted revenue source to pay the debt. In particular, General Obligation bonds remain an expense of between \$40 and \$50 million annually until FFY 2023, and are not eliminated entirely until FFY 2034.

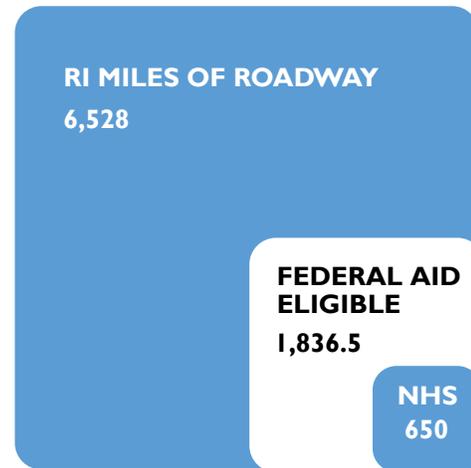

This STIP, which funds bridge maintenance and preservation in the near-term to avoid \$950 million in future bridge reconstruction and replacement costs, extends the existing Grant Anticipation Revenue Vehicle (Indirect GARVEE) bond from FY 2021 to FY 2024, in order to free up federal resources in the early years of the STIP. There is a minor interest and issuance cost associated with the Indirect GARVEE refinance (less than \$15 million), but the need for funds in the short term outweighs the transaction cost.

Motor Fuel bonds, the match to the original Indirect GARVEE issuance(s), are not impacted and will be paid off in FFY 2027. The new Indirect GARVEE bond is planned for late FFY 2016 and is scheduled as interest-only payments through FFY 2024, to preserve cash flow, while in the later years of the fifteen-year term, other debt will have expired, providing room in the constrained budget to ensure that all debt obligations are met.

### BRIDGE CAPITAL PROGRAM

Rhode Island ranks last in the nation, 50th out of 50 states, in overall bridge condition. About 22% of the 1,162 bridges in Rhode Island are structurally deficient. The largest investment in this STIP is in the Bridge Capital Program. Once this STIP is implemented, the percent of structurally deficient bridges in Rhode Island would be reduced, from 22% in 2014 to 10%

Figure 14: Rhode Island Roadway Mileage

in 2025. The Bridge Capital program was developed using an asset management approach to identify and develop a structured sequence of preservation, repair, rehabilitation, and replacement actions that will achieve and sustain a desired state of good repair at a minimum practicable cost. The Bridge Inspection and Rating program results in critical findings, identifying the need for immediate repair action on certain structures. If the repairs are not undertaken, the bridges would have to be posted or closed.

### Bridge Groups

Rhode Island has followed FHWA best practices by grouping bridges into corridors of work. These corridors of work are identified as bridge groups. Bridge groups help to reduce costs by consolidating certain services, such as traffic control, and allowing several bridges to be bid at once, providing economies of scale. Bridge groups identified with a “T” include bridges that are proposed to be funded, in part, by toll revenue/revenue reimbursed by tolls.

### Pavement Cost

The average cost is calculated on a square yard basis:

- Crack sealing: \$1 / square yard
- Resurfacing: \$35 / square yard in areas with no sidewalk or \$45 / square yard in areas with sidewalk
- Reclaiming: \$45 / square yard
- Reconstructing: \$138 / square yard

## Preservation

The work proposed for bridges in Bridge Groups 1 through 26 is preservation based upgrades. The preservation program identifies the work needed to extend the useful service life of the structures and covers all National Bridge Inventory (NBI) bridges. The work includes joint replacement, bridge washing, zone painting, deck repairs, minimum to moderate concrete or steel superstructure repairs, moderate substructure repairs, culvert repairs and concrete sealing.

## Rehabilitation and Replacement

The work proposed for bridges in Bridge Groups 30 through 71 is focused on rehabilitation and replacement. Most of these bridges have reached a point where rehabilitation can no longer be postponed. Work in this category includes superstructure rehabilitation or deck rehabilitation, if possible, or complete bridge replacement through traditional or innovative mechanisms when rehabilitation is no longer an option.

## Program Funding and Structure

The early spending surge in the bridge program is to prevent a large number of bridges in fair condition from becoming structurally deficient by performing preservation activities to prolong the useful service life of the bridge. A bridge that becomes structurally deficient must undergo a major rehabilitation or complete replacement to restore it to a state of good repair. The cost of performing a major rehabilitation or complete replacement is 3 to 4 times as expensive as performing a preservation activity.

## Project Criteria and Selection

RIDOT evaluates bridges through an asset management filter, considering many factors when selecting and prioritizing bridge projects for rehabilitation or replacement including structural condition, load capacity, load posting, structure type, deterioration rate, traffic volume, detour route, access and emergency facilities, evacuation route, and public input. In addition, the scheduling of bridge projects is greatly affected by environmental permitting, historic preservation issues and Amtrak. Using the above factors, RIDOT determines the scheduling and prioritization for all projects, and may vary the schedule from that listed in the STIP.

## PAVEMENT CAPITAL PROGRAM

Highway Functional Classification is the process through which the states, as required by the FHWA,

define the role every public road plays in the nation's highway network. Using a consistent system, each roadway is classified into a hierarchy of types with three levels: arterial, collector, and local, which are classified further as "urban" or "rural." Also important is the connection between functional classification and the NHS. The NHS is composed of roadways important to the nation's economy, defense, and mobility; it includes interstates, intermodal connectors such as train stations and airports, the Strategic Highway Network, and major strategic highway connectors. Current federal transportation authorization legislation requires states to prioritize resources toward the NHS.

Rhode Island has a total of 6,528 miles of roadway. 1,836.5 miles, or 28% of the total mileage is eligible for most types of federal aid. About 650 miles, or 10% of the state's roadways are listed on the NHS. The Pavement Structural Health Index (PSHI) per mile traveled will be maintained at an average of 80% over the time frame of the STIP using an asset management approach, which invests in road surfaces using a "right treatment, to the right pavement, at the right time" approach to prevent pavement failure. The additional RhodeWorks investment allows for additional miles to be paved, improves the total PSHI and extends the life of the road surface. A PSHI greater than 80% is considered good condition.

In general, it is much less expensive to apply the right treatments to roadway surfaces to extend their lives rather than reconstructing the roadways when they fail. It is important to note that costs can also vary based on a wide range of factors, such as traffic volume, road width, base materials, current conditions, and specific environmental conditions in the area of the roadway. However, a proactive approach to pavement management can extend the life of road surfaces statewide.

## Pavement Projects

The Pavement Capital Program includes funding for construction projects as well as project related design and right-of-way. All of the construction projects are devoted to projects that preserve and manage the existing system. The program includes funding for 160 projects that will resurface 330 centerline miles of roads over the time frame of the STIP, all of which have significance for improved access, economic development and safety. The program includes the resurfacing of roadways and other related improvements including pedestrian improvements, drainage upgrades, and ADA compliance. Roadways listed in the program include recommendations from RIDOT and projects submitted

Figure 15: Rhode Island Traffic Fatalities: Actual and Predicted 2010 - 2025

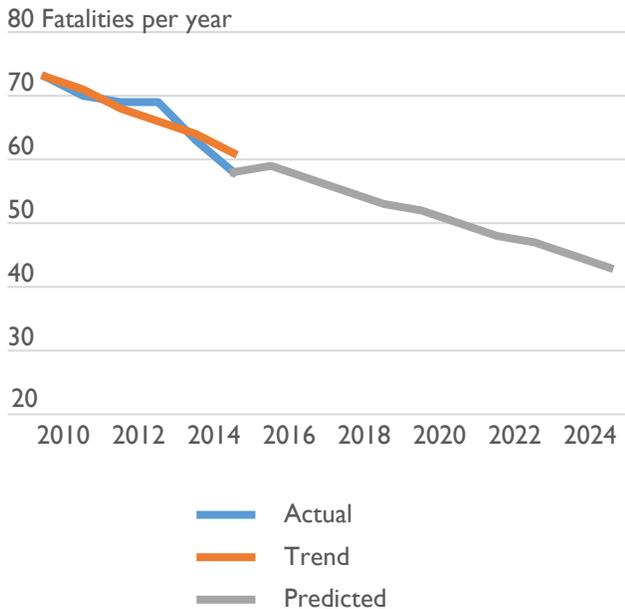

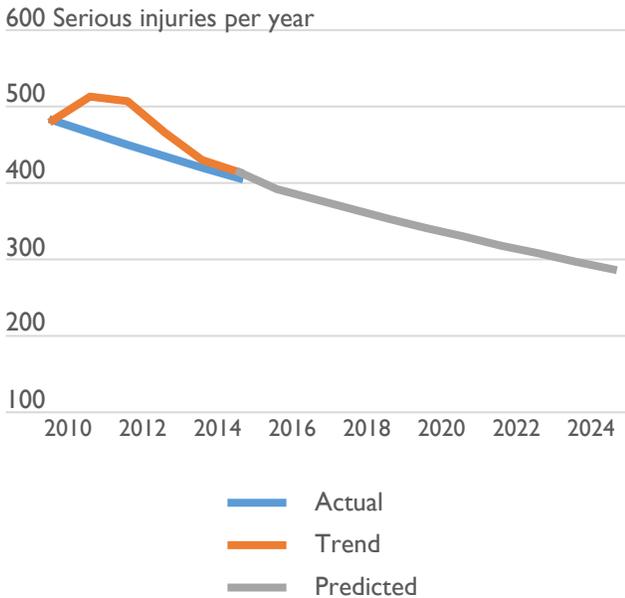

Figure 16: Rhode Island Traffic Serious Injuries: Actual and Predicted 2010 - 2025

by municipalities during the STIP project solicitation process.

### Program Funding and Structure

The pavement program is funded by a combination of federal appropriations and state resources. The STIP matches the funding available to the pavement projects selected through RIDOT’s asset management based approach.

### Project Criteria and Selection

RIDOT evaluates roadways through an asset management filter, considering many factors when selecting and prioritizing roadway projects including pavement condition, average daily traffic, functional classification, commitments/designs underway, scope and cost of repairs necessary, and public input. Roadways with the worst rating are candidates for resurfacing. Final selection considers traffic volumes, municipal priority rankings and input. State roads are given a priority, but local roads may also be included in the program based on factors such as regional significance (e.g. NHS listing) of the road. Using the above factors, RIDOT determines the scheduling and prioritization for all projects, and may vary the schedule from that listed in the STIP. RIDOT may also propose alterations to the program to address immediate and critical pavement condition deficiencies through a STIP amendment.

## TRAFFIC SAFETY CAPITAL PROGRAM

One of the most important aspects of highway travel is safety. While roadways today are physically safer and more forgiving of error than those of the past, many crashes, injuries, and fatalities still occur due to traffic volumes, speed, driver distraction, impaired driving, inexperienced drivers, and lack of use of occupant protection. Therefore opportunities remain for the incorporation of additional safety features into problematic highway segments and intersections, as well as pedestrian facilities to improve safety and, to the extent possible, compensate for human error and reckless behavior. The overall goal of the traffic safety capital program is to reduce, towards zero deaths, fatal and serious injury crashes on all public roadways.

Activities and projects supported through RIDOT’s Traffic Safety Capital program in the STIP include the following:

## Strategic Highway Safety Plan

The 2014 Rhode Island Strategic Highway Safety Plan (SHSP) provides the overall direction for the implementation of RIDOT's traffic safety program, including the Highway Safety Improvement Program (HSIP) and the Highway Safety Plan (HSP). The SHSP also assists in coordinating efforts between driver behavior programs and engineering solutions through a comprehensive, inclusive, data-driven approach that combines the 4 E's of highway safety (engineering, education, enforcement, and emergency response). The ultimate goal of the SHSP is to reduce, towards zero deaths, fatal and serious injury crashes on all public roadways. The SHSP outlines the following seven emphasis areas that support that ultimate goal: impaired driving, intersection and run-off-the-road crashes, occupant protection, older drivers, speeding, vulnerable road users, and young drivers.

## State Traffic Commission

RIDOT provides administrative and consultant support to the Rhode Island State Traffic Commission (STC). The STC is established under Rhode Island General Laws 31-13-1 for the purpose of establishing a uniform system of traffic control signals, devices, and signs for use upon State owned highways. The STC meets on a monthly basis and its membership includes representation of the Rhode Island State Police, Division of Motor Vehicles (DMV), RIDOT, Governor's representative to the National Highway Traffic Safety Administration (NHTSA), and member of the public appointed by the governor.

RIDOT, municipalities, state and local police, the federal government, and members of the Rhode Island General Assembly may all request STC review of eligible projects. These projects include review of existing and proposal of new traffic control devices, speed limits, stop signs/signals, turning lanes, geometric improvements, as well as pedestrian and intersection safety improvements such as crosswalks, wheelchair ramps, and pedestrian crossing devices. Essentially, the STC oversees all traffic control devices on State roads.

Projects are presented before the STC in the order in which they are received by RIDOT. Projects that require further engineering study or analysis will be conducted by RIDOT staff or through consultant support to provide analysis and develop a recommendation on the requested action to the STC. The STC will then vote on the request. If the request is approved by the STC, RIDOT will implement the recommended action or request,

either through its Maintenance Division or through construction contracts.

## On-call Highway Safety Improvement Program Engineering Support

As part of RIDOT's review and ranking of all potential traffic safety projects, staff review and advance projects to design as funding allows. Selected projects are advanced to 10 percent design through RIDOT's in-house design staff who can also rely upon on-call consultant assistance for the preparation of design plans in need of safety improvements to ensure a quick turnaround from time of initial screening. Consultant support is also used for the preparation of the annual HSIP report RIDOT submits to FHWA.

## Safety Improvements

RIDOT funds various traffic safety improvements including the following:

### Roadway Departure Mitigation

- *Systemic Bridge Blunt End Treatments* - Installation of abutments and/or roadside barriers surround existing bridge structures and supports. The intention is that these treatments are more forgiving to crash victims than a bridge structure.
- *Guardrail and Median Improvements* - Installation of median cable/guardrails on limited access facilities with a median less than 70 feet wide. It also includes the installation of guardrails as a safety feature when deemed necessary by an engineering study.
- *Horizontal Curve Delineation* - Addition of curve warning signage, striping, and other delineation measures to assist vehicles through a horizontal curve.
- *Systemic Roadway Delineation* - Addition of roadside delineators on both sides of statewide limited access facilities.
- *Non-freeway Roadside Improvements* - Removing, relocating, or shielding roadside objects to create a clear crash zone along the roadside. This also includes lane delineation and rumble strips to prevent vehicles from departing the roadway.
- *Systemic High Friction Surface Treatments* - Applying a high-friction surface treatment at locations that experienced roadway departure and high-speed rear-end crashes where enhanced friction may help reduce the likelihood of a crash.

### **Wrong Way Driving Mitigation**

Installing enhanced signage, striping, and ITS technology to deter wrong way driving on limited access facilities statewide. It also includes geometric improvements to ramp facilities to deter wrong way drivers.

### **Intersection Improvements**

Intersection improvements can include traffic signal improvements such as retiming, general phasing, left or right turn phasing, and coordinating multiple systems; pedestrian upgrades including crossing signals, pedestrian signal controls, crosswalks, enhanced medians, pedestrian safety islands, and sidewalk extensions; turning lanes at signalized intersections and turning medians; jug handle turns for at grade intersections; acceleration or deceleration lanes on roadways; installation of roundabouts; adaptive signal controls; and geometric improvements.

### **Interchange Improvements**

Interchange improvements can include geometric modifications, adding acceleration or deceleration lanes, and adding frontage roads (also called service or access roads).

### **Pedestrian Improvements**

Pedestrian improvements aim to increase pedestrian safety, as well as improve the pedestrian experience. Improvements can include pedestrian wayfinding signage, pedestrian accommodations, geometric improvements, ADA improvements, and enhanced traffic signals.

### **Corridor Improvements**

For systematic improvements to more effectively deploy safety improvements on a wide-scale basis, RIDOT's traffic safety engineers typically focus on entire corridors in lieu of a particular hot spot with a severe crash trend. Countermeasures on the corridor level basis can include road diets, guardrail and median improvements, pedestrian and bicycle safety improvements, and traffic signal improvements.

### **Local Safety Improvements**

Municipalities may request improvements on non-state owned roadways. Such safety projects typically include signing, striping, and road diets. Other construction options are reviewed relative to an engineering study.

### **Traffic Signal Optimization**

Upgrade and repair of traffic signals, including the installation and maintenance of Intelligent Transportation Systems (ITS) that improve traffic flow throughout the roadway network, thereby reducing vehicle delay and the number of vehicle stops required.

### **RI\*STARS – Bottleneck Reduction**

RIDOT's Strategically Targeted Affordable Roadway Solutions (RI\*STARS) program, involves partnerships between local communities and RIDOT staff to identify critical safety and congestion locations in the state. A detailed improvement plan for the selected locations is then developed with a focus on delivering low-cost and high benefit safety and mobility improvements. Longer-term proposed improvements can be incorporated into existing planned projects or through stand-alone contracts.

Starting in 2013, RIDOT incorporated the Localized Bottleneck Reduction program into the RI\*STARS program. As part of this program, highway segments and signalized intersections experiencing fatal and serious injury crashes, as well as high delay/congestion are investigated. Mitigation measures range from restriping auxiliary lanes to longer-term solutions such as roadway widening.

### **Sign and Structure Replacement**

Replacement of older, faded overhead mounted guide signs (greater than 4'x 8') with brighter and more visible signs for interstate and other freeways and expressways such as Interstate 95 and Route 146. In addition this item funds the replacement of signs that are at the end of their service life or that do not comply with new federal reflectivity requirements.

### **Program Funding and Structure**

RIDOT's Traffic Safety Capital Program is funded primarily through federal programs that require various amounts of state match funding depending on the specific program or project. Generally the federal funding programs utilized to fund safety improvements include HSIP, STBG, and NHPP. HSIP funds safety improvement projects, such as installing roundabouts, installing or modifying traffic signals, installing median guardrails, modifying intersection geometry, and installing traffic signs and pavement markings at intersections, interchanges, and roadway segments identified as being most in need of safety improvements. Generally, RIDOT's HSIP eligible projects are funded with 90 percent federal funds and 10 percent state funds.

STBG funds can also be used for projects on any road on the federal-aid system, including pedestrian and bicycle infrastructure. Generally, RIDOT's STBG eligible projects are funded with 80 percent federal funds and 20 percent state funds. NHPP funds support the condition and performance of the NHS. In general, RIDOT's NHPP eligible projects are funded with 80 percent federal funds and 20 percent state funds.

### Project Criteria and Selection

RIDOT's Traffic Safety Capital Program projects are identified by RIDOT staff or municipalities. All requests for improvements must be tied to the site-specific locations and/or systemic risk facilities identified annually by RIDOT. The following is a brief description of the common project types and requests:

#### HSIP Projects

On an annual basis, RIDOT conducts a roadway network screening process to identify potential HSIP projects. The roadway network screening utilizes prior year crash data to identify roadway facilities exhibiting the most severe safety needs based on demonstrated crash severity and crash frequency. The amount of locations RIDOT addresses in a given year depends on current state resources, and the amount of other HSIP proposals.

RIDOT generally addresses locations exhibiting the most severe need for safety improvement, but may also choose to address any facility exhibiting a risk depending on resources, project geography, and similar work elements. Projects identified by HSIP take priority over other requests. Often, locations petitioned by other requests overlap with HSIP Program projects.

RIDOT next evaluates the effectiveness of potential countermeasures identified in a Design Study Report (DSR), Road Safety Audit (RSA), and/or engineering study to better prioritize projects for implementation. Once a set of countermeasures or potential solutions has been identified, a list of prioritized projects to meet available resources is developed. RIDOT accomplishes this task by examining benefit/cost (B/C) ratios (i.e. the amount of safety benefit gained compared to the cost of the improvement). The B/C ratios are calculated as part of a DSR using the crash cost savings calculation, determined from the estimate of the expected monetary savings associated with a crash (items include property damages, emergency services, traffic delays, medical and rehabilitation care, lost of productivity and disability compensation, as well as pain, suffering, and grief) compared to the construction costs over the

Image 6: Providence & Worcester Railroad Grade Crossing

credit: Flickr-kuknauf

countermeasure service life. Once projects are identified and funding is secured, HSIP projects are designed and constructed as part of the implementation component.

Finally, RIDOT evaluates HSIP projects and programs to determine the effectiveness of the safety improvements to see if they are achieving the desired results outlined in the SHSP and to continuously improve the HSIP process and future planning. These project evaluations provide quantitative estimates of the specific countermeasure, project, or group of projects. The results from the evaluation are used to make design and data standards changes when performing the HSIP process in following years.

#### Planned Projects with Safety Features

RIDOT's non-safety based projects, such as pavement overlays and pavement reconstruction projects, may have safety improvements eligible for HSIP funds. Such improvements include rumble strips, signing, striping enhancements, new guardrails, intersection improvements, and roadway safety edges.

#### Municipal Request

As mentioned previously, RIDOT allocates funds for safety projects on non-state owned roadways. Municipalities may submit a HSIP proposal on any facility they wish, however it must meet HSIP eligibility requirements to be considered. RIDOT also reviews STIP applications to determine if any projects or project elements are HSIP eligible or overlap with programmed safety projects.

## State Traffic Commission

Requests to the State Traffic Commission (STC) that are safety related are forwarded to the HSIP Program.

## Special Request Projects

RIDOT receives and reviews requests for special projects where there is a defined safety issue. Eligible projects are forwarded to appropriate funding programs.

## RAILWAY HIGHWAY CROSSING PROGRAM

Nationally, the aspect of railroad safety most visible to the public is generally the interface between the rail and highway systems at grade crossings. According to the Federal Railroad Administration, Office of Safety Analysis, as of March 2016 Rhode Island contained a total of 217 public, private, or pedestrian railroad crossings that are either open at-grade or are grade-separated crossings. Rhode Island does however contain relatively few public at-grade crossings, with a total of 66 crossings. RIDOT's Railway-Highway Crossing Program provides for the elimination of hazards at these crossings with the installation of protective devices at public railway-highway crossings, the elimination of at-grade crossings through grade separation, or the consolidation or closing of crossings.

### Program Funding and Structure

Rhode Island's Grade Crossing Improvement Program is administered by the Intermodal Planning Division of RIDOT and is funded through RIDOT's Traffic Safety Program with federal Highway Safety Improvement Program (HSIP) funds. RIDOT allocates approximately \$1 million annually for two grade crossing improvement categories – grade crossing surface projects and grade crossing signal projects. The federal share for HSIP funds for grade crossing projects is typically 90 percent.

### Project Criteria and Selection

RIDOT maintains an internal grade crossing improvement plan to guide their program decision making and prioritize projects listed in the plan, which is updated approximately every 2 years. RIDOT also coordinates with the rail freight carriers to identify potential projects, conducts site visits, and assesses and prioritize crossings on the basis of traffic volumes, accident reports, and increased business and other activity in the vicinity of the crossing.

## TIP Guiding Principles

- > Mobility Benefits
- > Cost Effectiveness
- > Economic Development
- > Environmental Impact
- > Supports Local and State Goals
- > Safety and Security
- > Equity

### Full guiding principles are available at:

<http://www.planning.ri.gov/statewideplanning/transportation/tip.php>

## DRAINAGE CAPITAL PROGRAM

The drainage capital program includes a comprehensive plan to inspect and inventory Rhode Island's statewide highway drainage systems. The state is responsible for an estimated 25,000 stormwater catch basins, 2,000 outfalls, and 100 structural best management practices (stormwater treatment systems). The inventory results will drive the development of a plan to invest funding over ten years. This plan will allow the state to take a more proactive approach to stormwater management. As storms become more frequent and coastal flooding becomes a growing threat, the need to inventory, repair, and maintain drainage systems becomes more critical to prevent hazards and deterioration of other transportation infrastructure components.

### Program Funding and Structure

Much of the drainage work is considered "operations" (e.g. street cleaning, annual storm drain inspection) and is included in the drainage maintenance portion of the program outlined previously. This line item represents capital improvements in drainage.

### Project Criteria and Selection

In October 2015, Rhode Island entered into a Consent Decree with the United States Environmental Protection Agency (EPA) which lays out specific actions and conditions which must be met, including reduction of pollutants and discharge, along with development of plans for various components of the stormwater system. The investments identified under the drainage program are consistent with the consent decree and will ensure

that the state is able to meet its obligations under EPA stormwater regulations.

## **TRANSPORTATION ALTERNATIVES PROGRAM**

The Transportation Alternatives Program (TAP) provides funding for programs and projects defined as transportation alternatives, including on- and off-road pedestrian and bicycle facilities, infrastructure projects for improving non-driver access to public transportation and enhanced mobility, community improvement activities, and environmental mitigation; recreational trail program projects; and safe routes to school projects.

### **Program Funding and Structure**

The national total reserved for the Surface Transportation Block Grant – Set Aside Transportation Alternatives, formerly the TAP funding, is equal to 2 percent of the total amount authorized from the Highway Account of the Highway Trust Fund for Federal-aid highways each fiscal year. That funding is then apportioned out to states. Unless the Governor opts out in advance, a portion of each state's Surface Transportation Block Grant – Set Aside Transportation Alternatives apportionment is directed to the Recreational Trails Program (RTP). Rhode Island has not opted out of this program, therefore funding is apportioned to the RTP. In addition, Rhode Island also uses a combination of state sources, including Highway Maintenance Account and gas tax proceeds to fund alternative transportation projects.

### **Project Criteria and Selection**

TAP projects are selected through subcommittees of the TAC. Generally, there are several subcommittees reviewing and ranking projects in the categories of Bicycle Facilities, Pedestrian Facilities, Safe Routes to School, Recreational Trails, and Other Transportation Enhancements. Projects are not scored using a numeric scoring process. TAC Subcommittees use Guiding Principles based on the goals articulated in the Long Range Transportation Plan, Transportation 2035, in their decision making. This defined set of guiding principles take into consideration such things as mobility, cost effectiveness, environmental impact, economic development, safety and security, support for state and local goals and equity. The TAC reviewed and ranked the highest priority projects from these five TAC subcommittees into a single list of projects to recommend to the State Planning Council and RIDOT for TAP funding.

## **PLANNING – PROGRAM DEVELOPMENT**

The public is the primary beneficiary of the nation's intermodal transportation system built to serve public mobility and productivity. Transportation decisions need to be made in an environmentally sensitive way, using a comprehensive planning process that includes the public and considers land use, development, safety, and security. Transportation planners undertake a comprehensive analysis and evaluation of the potential impact of transportation plans and programs while addressing the aspirations and concerns of the society served by these plans and programs. Planners examine past, present, and prospective trends and issues associated with the demand for the movement of people, goods, and information at local, rural, tribal, metropolitan, statewide, national, and international levels.

### **Program Description**

Rhode Island depends on a safe and efficient transportation system to strengthen communities, provide access to jobs, services, and centers of trade, and retain and enhance economic competitiveness in the global marketplace. Transportation affects almost every aspect of our lives. The statewide transportation planning process is a forum through which transportation decisions are made to address these issues. In cooperation with the MPO, RIDOT conducts continuing, comprehensive and collaborative intermodal statewide transportation planning that facilitates the efficient, economic movement of people and goods in all areas of the state, including metropolitan areas.

Through the State Planning and Research Program, RIDOT has prioritized the following program areas:

#### **Data Collection**

RIDOT focuses its data collection on highway construction, motor vehicle registrations, finance, performance measures and asset management.

#### **Civil Rights**

##### *American with Disabilities Act*

The American with Disabilities Act of 1990 (ADA) is Federal Civil Rights Legislation, which mandates non-discrimination to persons with disabilities. The U.S. Congress passed the ADA in 1990, and it went into effect in 1992. The ADA is a civil rights law that prohibits discrimination against individuals with disabilities in access to jobs, public accommodations, and governmental services and programs, public transportation and telecommunication.

Title II of the ADA, which prohibits general discrimination by local governments on the basis of disability, is contained in Section 504 of the Rehabilitation Act of 1973. It prohibits the state from denying persons with disabilities the equal opportunity to participate in its services, programs or activities, either directly or indirectly through contractual agreements. It is important that the state, as recipient of federal funding, complies with all federal and state laws, including those protecting persons with disabilities under Section 504 of the Rehabilitation Act of 1973.

Title II requires that all public entities with 50 or more employees perform a self-evaluation of all programs, services, facilities, and the public right-of-way, prepare a transition plan, make the transition plan available for three years, publish a notice of non-discrimination, designate an ADA Coordinator, and develop a formal complaint form and grievance procedure.

In order to comply with these requirements, RIDOT has developed a Transition Plan by conducting a self-evaluation of State public right-of-ways and state facilities to ensure accessibility by person with disabilities. The ADA Transition Plan identifies issues of accessibility that need to be addressed and proposes a schedule for the improvement of those facilities. In addition, RIDOT complies with ADA standards for all new construction projects. Based on the results of the self-evaluation, appropriate actions will be developed to remove physical barriers to accessibility.

#### *Title VI of the Civil Rights Act of 1964*

RIDOT is a direct recipient of federal funds under FHWA's Federal-aid highway program. All recipients of federal funding must comply with the requirements of Title VI of the Civil Rights Act of 1964 and other nondiscrimination statutes, regulations and authorities.

As a recipient of FHWA funds, RIDOT is under an obligation, pursuant to 23 C.F.R. § 200.9(b) (11), to submit a Title VI Plan to FHWA for review and approval. The purpose of this plan is to describe how RIDOT implements federally-mandated Title VI requirements, including those imposed under Executive Orders No. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, and No. 13166, Improving Access to Services for Persons with Limited English Proficiency, in its policies, procedures and operations to ensure nondiscrimination in overall program delivery.

#### *Disadvantaged Business Enterprise Program*

RIDOT has established a Disadvantaged Business Enterprise (DBE) program in accordance with regulations of the USDOT, 49 CFR Part 26. RIDOT has received federal financial assistance from the US Department of Transportation, and as a condition of receiving this assistance, RIDOT has signed an assurance that it will comply with 49 CFR Part 26.

It is the policy of RIDOT to ensure that DBEs, as defined in Part 26, have an equal opportunity to receive and participate in USDOT assisted contracts, without regard to race, color, national origin, or sex. To this end, it

Image 7: URI Transportation Center Training

*credit: RIDOT*

is also RIDOT's policy to ensure that the following program objectives are achieved:

- to ensure nondiscrimination in the award and administration of USDOT assisted contracts;
- to create a level playing field on which DBEs can compete fairly for USDOT assisted contracts;
- to ensure that the DBE Program is narrowly tailored in accordance with applicable law;
- to ensure that only firms that fully meet 49 CFR Part 26 eligibility standards are permitted to participate as DBEs;
- to help remove barriers to the participation of DBEs in USDOT assisted contracts; and
- to assist the development of firms that can compete successfully in the market place outside the DBE Program.

## Transit Planning

Transit Planning focusing on short term actions items and long term strategies to increase transit usage in the second most densely populated state in the country.

## Capital Planning

The focus of RIDOT's Capital Planning is on the creation and maintenance of the Ten Year Plan for the agency, including the development of the department's annual five-year capital budget, and required reporting to various agencies within Rhode Island and at the federal level.

## The Local Technical Assistance Program (LTAP)

LTAP provides administration of and assistance in organizing and coordinating a training program for personnel involved in local and state public works activities. It focuses on programs and workshops covering topics such as: Flagger Certification, Chain Saw Skills and Safety, Welding Training, Leadership Skills, Driver Training Microsoft Computer Programs, Bucket Truck Training, Managing People, Confined Space Training, Preparing to take the Hoisting Engineers Exam, and Preserving Your Pavements. Other courses will be offered utilizing the driving simulator purchased by the University of Rhode Island Transportation Center. These courses address basic driving skills for maintenance vehicles and snow plows as well as safety and fuel efficiency issues. LTAP also produces an electronic newsletter and web site.

## Permitting Partner Coordination

In order to introduce efficiencies into the permitting, approval and coordination processes associated with capital, operations and permitting programs, RIDOT currently has active agreements with two entities: the RIDEM and the Rhode Island Historical Preservation and Heritage Commission (RIHPHC). These agreements provide monetary resources for the agencies, which in turn allows for streamlining of associated regulatory and coordination processes. Specifically, RIDOT has an agreement with RIDEM wherein RIDOT pays for RIDEM staff time for regulatory review on a quarterly basis rather than paying an application fee for each application filed. The monetary resources associated with this agreement have allowed additional hires at RIDEM to process applications in a more timely manner. A similar agreement exists with RIHPHC, but RIHPHC bills on a monthly basis. RIDOT also has a streamlining agreement with RIHPHC that grants delegated authority to RIDOT under Section 106 of the National Historic Preservation Act. There are currently

no active agreements with the Narragansett Indian Tribal Historic Preservation Office.

## Research Program

The Research Program focuses on areas of interest, in regard to transportation technology, cooperatively with the University of Rhode Island, including environmental management, transportation behavior, structural safety and reliability, risk analysis and thermodynamics. The RIDOT Materials and Research Office has a cooperative agreement with the University of Rhode Island to manage this program.

## University of Rhode Island Transportation Center

RIDOT and the University of Rhode Island (URI) have discussed and identified common interests in the areas of transportation-related education and outreach to women and minorities to encourage transportation related career paths.

URI has been named a University Transportation Center (URITC) by the United States Department

### More information

The current UPWP is available at:

<http://www.planning.ri.gov/about/>.

of Transportation. Therefore collectively URI and RIDOT are developing a more intense educational program targeted to a smaller pool of students with the continuation, refinement and enrichment of the cooperative education partnership developed between RIDOT, American Association of State Highway and Transportation Officials - Transportation and Civil Engineering Outreach Program, URI and local area schools. This concentration of resources will provide more detailed and interactive programs between students, educators and transportation professionals.

## Metropolitan Planning

The metropolitan planning process establishes a cooperative, continuous, and comprehensive framework for making transportation investment decisions in metropolitan areas. Metropolitan transportation planning is the process of examining travel and transportation issues and needs in metropolitan areas. It includes a demographic analysis of the community in question, as well as an examination of travel patterns and trends. The planning process includes an analysis of alternatives to meet projected future demands, and for

providing a safe and efficient transportation system that meets mobility while not creating adverse impacts to the environment.

In metropolitan areas, with a population over 50,000, the responsibility for transportation planning lies with the Metropolitan Planning Organizations (MPO). The MPO is the designated local decision-making body that is responsible for carrying out the metropolitan transportation planning process. Rhode Island has a single MPO, covering the entire geography of the State, and the local decision making body is the State Planning Council. The State Planning Council is supported by staff of the Rhode Island Department of Administration's Statewide Planning Program.

The major transportation priorities of the MPO in Rhode Island are:

- Maintaining and updating the State's Long Range Transportation Plan at least once every five years;
- Maintaining and updating the State Transportation Improvement Program at least every four years;
- Compiling a Unified Planning Work Program (UPWP). This work program outlines the priorities of the MPO in great detail and is updated on an annual basis.

## **Program Funding and Structure**

### *Statewide Planning*

Funding is provided for Statewide Planning by a 2% set-aside from each state's apportionments of four programs: the National Highway Performance Program (NHPP); the Surface Transportation Program (STP); the Highway Safety Improvement Program (HSIP); and the Congestion Mitigation Air Quality Improvement Program (CMAQ) Program. Of the funds that are set aside, a minimum of 25% must be used for research purposes.

### *Metropolitan Planning*

FHWA authorizes a lump sum of funding for each program. Once each state's combined total apportionment is calculated, an amount is set aside for the State's Metropolitan Planning program through a calculation based on the relative size of the state's FY 2009 Metropolitan Planning apportionment. This funding comes from FHWA to RIDOT and is then sub-allocated to the MPO.

## **Project Criteria and Selection**

### *Statewide Planning*

The process for including projects into the SPR work program includes solicitation among various RIDOT offices. Proposals are submitted to RIDOT Intermodal Planning and reviewed by staff amongst the offices. A consensus is reached, and if projects and programs are determined eligible they are included in the work program, along with a task-specific budget breakdown.

### *Metropolitan Planning*

The activities of the Statewide Planning Program are guided by a Unified Planning Work Program (UPWP). It summarizes the numerous programs and products that the MPO expects to conduct over the next year. It also documents the proposed expenditure of federal, state and local transportation planning funds over the next year. The development of the UPWP begins in February with the solicitation of major new projects from internal staff, as well as from RIDOT and RIPTA. The priorities are all combined and a meeting of the three agencies is convened to discuss the projects and ways to better coordinate and fund the work between the agencies. A draft of the UPWP is circulated to the State Planning Council (MPO) and its advisory committees, the Technical Committee and the Transportation Advisory Committee, for review and comment. Input from those bodies is taken and incorporated into the UPWP. The updated UPWP is then presented again to the MPO and MPO advisory committees for final review and approval. Finally, the UPWP is submitted to FTA and FHWA for review and approval.

## **Toll Capital Program**

RIDOT intends to install toll facilities in 14 toll locations. The toll facilities will consist of cashless All Electronic Tolling (AET) equipment mounted on overhead gantries. Legislation passed in February 2016, enables RIDOT to toll large commercial trucks (a tractor or truck tractor as defined in 23 CFR 658.5, pulling a trailer or trailers).

The funding for these gantries may initially be provided by state resources or through availability payments as part of a public-private partnership, but will ultimately be repaid by toll revenue/revenue reimbursed by tolls.

The initial toll locations were developed based on both internal and expert traffic and revenue analysis. RIDOT is in the process of developing a Memorandum of Understanding with FHWA and is in the process of retaining a firm to conduct a Level III traffic and revenue

study. These processes will help to refine the ultimate gantry locations.

## Maintenance Capital Program

The Division of Highway & Bridge Maintenance is responsible for the continued maintenance and upkeep of over 90 structures, ranging in size from 10'x10' storage sheds to its nearly 60,000 square foot Headquarters building. Each of these structures requires regular inspections, preventative maintenance and repairs in order to keep each asset safe and functional. The Division also maintains and operates a fleet valued at nearly \$60 million. Currently, RIDOT is exploring ways to modernize the fleet and is exploring all avenues, including leasing options and regional purchasing.

The Division of Highway & Bridge Maintenance is also responsible for the operation and maintenance of three historic train stations (Westerly, Woonsocket, and Kingston), along with Wickford Junction train station. The Division of Highway & Bridge Maintenance also oversees the state's salt storage facilities. These facilities must be provided in easily accessible locations and in compliance with environmental regulations, which require that each salt storage facility be covered and provide enough room inside the structure to allow loading and unloading within the enclosure.

## Program Funding and Structure

Funding for both facilities and fleet purchases or leases comes from state funding sources: Highway Maintenance Account, gas tax, or RICAP funds are applied, depending on the type of expenditure. RICAP funding, for example, can be used for asset protection projects but cannot be used for leases, financing, or debt service.

## Project Criteria and Selection

Projects are prioritized according to need and available resources and are submitted for State Budget Office review as part of the annual Capital Budget process.

## Regionally Significant Projects

Regionally significant projects are defined by USDOT as a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's

Image 8: Providence Train Station

credit: RIDOT

transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel.

Federal regulations require that the STIP shall contain all regionally significant projects requiring an action by the FHWA or the FTA whether or not the projects are to be funded with 23 U.S.C. Chapters 1 and 2 or title 49 U.S.C. Chapter 53 funds (e.g. addition of an interchange to the Interstate System with state, local, and/or private funds, and congressionally designated projects not funded under title 23 U.S.C. or title 49 U.S.C. Chapter 53). For informational and conformity purposes, the STIP shall include all regionally significant projects proposed to be funded with federal funds other than those administered by the FHWA or the FTA, as well as all regionally significant projects to be funded with non-federal funds.

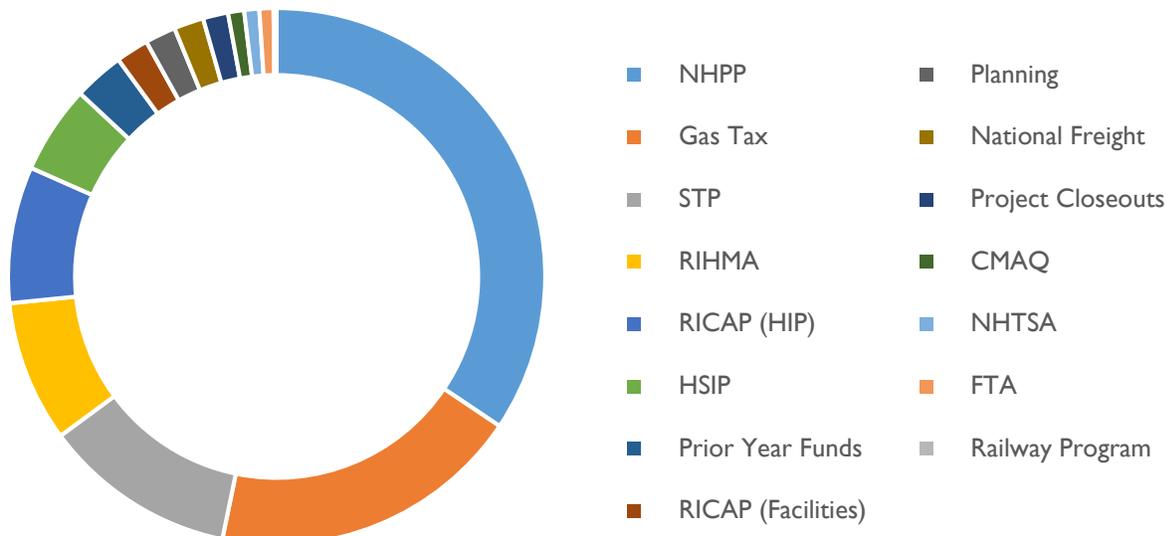

## Funded Regionally Significant Projects

The following projects have been classified as regionally significant projects according to the USDOT definition. They are listed as funded projects in the FY 17-25 STIP.

### Route 6/10 Redesign/Reconstruction

RIDOT has identified the Route 6 and Route 10 highways as priority corridors for infrastructure and transit investment. The Route 6/10 Multimodal Corridor Improvement Project (6/10 Project) will evaluate a

Figure 17: RIDOT Capital Budget Funding Sources FFY 2017

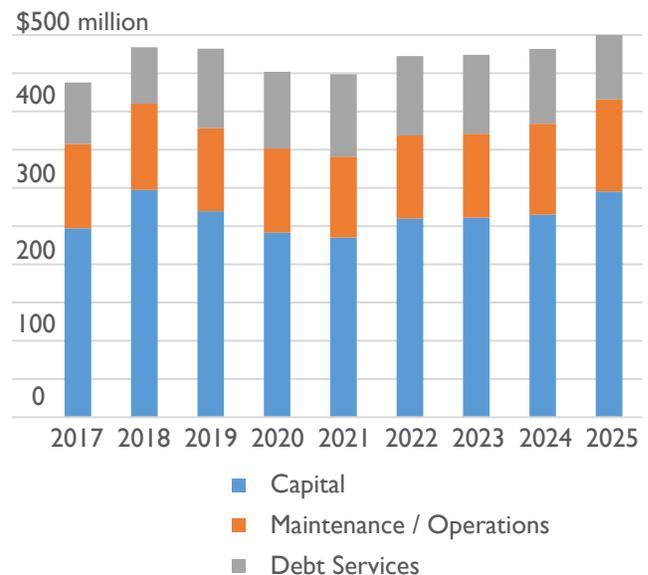

transportation corridor to include dedicated transit facilities and roadway and bridge infrastructure to improve mobility within the Providence metropolitan area. This project includes the 6/10 Interchange within its limits and the interchange itself is a key element of the project as it moves forward. The highway component of this project is funded (and fiscally constrained) in the STIP, while the transit component is reliant on discretionary grants or other sources yet to be identified. The planning process for both components of the project is taking place simultaneously, but the highway component represents a critical need, with multiple structures considered structurally deficient and functionally obsolete. In combination, this project will cost \$800 million, with an estimated \$400 million for the highway component and another \$400 million for the transit component.

### Route 95 Viaduct – Northbound

The FY 2013-2016 included the construction of the Providence Viaduct Southbound as a project of regional significance. The Southbound project is anticipated to be finished in December 2016. The Providence Viaduct Northbound is scheduled to be advertised in the spring of 2017 and to begin construction in the spring of 2018. Completion is scheduled for 2021 and the estimated cost is \$110 million. The Viaduct Northbound incorporates the span on Interstate 95 Northbound over and adjacent to West Exchange Street, I-95 on and off ramps, Route 6, Amtrak rails, the Woonasquatucket River, Providence Place, and Promenade Street. Replacement of this span is critical, due to the structure’s age and condition, as well

Figure 18: RIDOT Expenditures FFY 2017 - 2025

as the fact that it is a critical link in the National Highway Freight Network.

### Pawtucket/Central Falls Train Station

The Pawtucket/Central Falls station would be an infill station located along the Northeast Corridor in between Providence Station and South Attleboro Station (MA). Service on the MBTA’s Providence Line could provide northerly connections to Boston and southerly connections to Providence Station, TF Green Airport, and Wickford Junction. The Pawtucket and Central Falls communities are densely populated, and they have demonstrated a strong transit need. Since much of the surrounding areas of the proposed station are vacant

or underutilized parcels, it is anticipated that station construction would spur robust economic growth, i.e. Transit Oriented Development.

### Unfunded Regionally Significant Projects

The following projects have been classified as regionally significant projects according to the USDOT definition. There is not funding available for these projects at this time but discretionary funding may be pursued should the opportunity arise.

#### Route 4 and Route 95 Interchange

This project would provide the missing movements at the I-95 and Route 4 Intersection: I-95 north to Route 4 south and Route 4 north to I-95 south. Currently, traffic traveling I-95 north must exit and take local roads in order to access Route 4 south. Similarly, Route 4 north traffic must take local roads to access I-95 south. This project involves construction of a series of flyovers to provide a direct bidirectional connection. This movement is especially helpful for commercial truck traffic traveling in and out of Quonset Business Park for I-95 south. This project is estimated to cost \$60 million.

#### Route 195 Interchange: Taunton and Warren Avenue

The purpose of this project is to provide improved highway access to I-195 in East Providence, while also providing improvements in traffic circulation and safety in the surrounding area. In conjunction with this project, other projects (such as Waterfront Drive) in East Providence are components that would encourage cohesive economic development. The project is estimated at approximately \$15 million.

Image 9: RIPTA Bus in Kennedy Plaza

credit: RIPTA

#### Route 146 at Sayles Hill Road Interchange

This project would eliminate the traffic light at the intersection of Route 146 and Sayles Hill Road. Almost the entirety of Route 146 is grade separated except for the traffic light at Sayles Hill Road. This project involves construction of a bridge to eliminate this traffic light and provide a grade separated movement along Route 146. This benefits both commercial truck traffic and automobile traffic and provides a safety benefit. The Sayles Hill Road intersection produces a high number of crashes. This project is estimated to cost \$30 million.

#### Route 403 Deferred Ramps

This project would involve completion of three ramps from the newly-constructed Route 403 extension into the Quonset Business Park and West Davisville industrial area. As the Park develops, increased traffic is now being re-routed onto the local Devil's Foot Road and Post Road. The ramps were deferred due to lack of funding, but as development increases, traffic is projected to increase by 70%. Completion of the ramps would improve local safety and traffic flow, improve access to the businesses on Post Road, and allow faster, more direct access to the businesses in the Park. The cost of the project is estimated to be approximately \$3.5 million, with Quonset Development Corporation willing to fund design (approximately \$600,000 of the cost).

#### Route 4 Traffic Light Elimination

This project involves constructing full grade separated interchanges along Route 4 at two locations. West Allenton Road and Tower Hill Road represent the last of the south-bound intersections on Route 4 with traffic lights, prior to reaching seaside destinations. This project would eliminate both traffic lights which are points of congestion along the route especially in the summer

## TRANSIT CAPITAL PROGRAM

### RIDOT Transit Capital Program

RIDOT's Transit Capital Program includes start-up and/or continuation of the transit project development phase (planning-preliminary engineering) for transit initiatives including but not limited to in-state rail shuttle, new transit stations and hubs, Northeast Corridor capacity improvements, passenger rail expansion, ferry terminals, and bus rapid transit.

### Program Funding and Structure

RIDOT's Transit Capital Program is funded primarily with FTA High Intensity Fixed Guideway program funds,

New Starts/Small Starts program funds and statewide transit planning funds.

### Project Criteria and Selection

Transit capital projects were evaluated by a subcommittee comprised of staff of the MPO, RIDOT, RIDEM, RIPTA and members of the TAC. Although the projects were not scored using a numeric scoring process, the subcommittees used guiding principles in their decision making. This defined set of guiding principles included mobility, cost effectiveness, environmental impact, economic development, safety and security, support for state and local goals and equity and are available at <http://www.planning.ri.gov/statewideplanning/transportation/tip.php>. Based on this subcommittee process, a list of recommended transit projects was developed and forwarded to RIDOT for inclusion in the STIP.

### RIPTA Transit Capital Program

RIPTA's capital program is focused on maintaining a state of good repair among its assets, improving operational efficiency, and enhancing its customers' experience with transit. RIPTA also strives to make major expansions in capital infrastructure, but is careful to consider expansion in the context of overall constraints to the operating budget.

The majority of RIPTA's capital program is dedicated to the maintenance and regular replacement of the buses and paratransit vans that provide over 18 million trips annually. Replacements and repairs are guided by asset management principles, focusing on the age of the vehicle with consideration of maintenance costs.

Each year the agency makes targeted improvements in passenger facilities, prioritizing those investments based on the ridership and importance to the system. RIPTA has over 4,000 bus stops in the system, from a sign on a rural road to major transit hub at Kennedy Plaza. Each stop is categorized for a particular level of investment. The agency plans to invest the appropriate level at each stop, balanced against the limitations of available funds.

### Program Description

#### Replacement of Fixed Route Vehicles

RIPTA's highest capital priority is regular replacement of revenue vehicles. RIPTA's current fleet includes 230 buses, trolleys, and vans used for fixed route and Flex zone service. Under the FAST act, RIPTA anticipates continuing to use Section 5307 and Section 5339 programs to fund 80% of the cost of replacement

Image 10: RIPTA Bus

credit: RIPTA

vehicles. Full-size buses are expected to operate a minimum of 12 years and 500,000 miles. Regular replacement of older vehicles allows RIPTA to keep maintenance costs predictable and keep the fleet up to date with current emissions control technology.

#### Replacement of Paratransit/Elderly/Disabled Vehicles

Passenger vans are used to transport passengers on RIPTA's ADA complementary paratransit service, which is required of every public transit provider. Qualified passengers use this scheduled door-to-door service if they are unable to use fixed route service. Paratransit vehicles also provide Non-Emergency Medical Transportation (NEMT) service. This year, RIPTA introduced a program, Rural Ride, which provides on-demand service to grocery stores and job sites in rural areas utilizing paratransit vehicles during off-peak hours when there is less demand for ADA trips. RIPTA anticipates using a combination of Section 5307 Urban Area program and Section 5310 Elderly/Disabled program funds to upgrade the current fleet of 110 vehicles, with adjustments based on size and cost of available vehicles.

#### Passenger Facility Upgrades

This program funds improvements to passenger hubs, bus shelters, and transit corridors, as identified in RIPTA's strategic plan. CMAQ funds may be used for improvements to passenger facilities as prioritized in RIPTA's passenger facilities enhancement program and to accommodate new technologies.

### **Administrative Facility Upgrades**

This program funds repairs to RIPTA's Elmwood and Newport bus garages, Elmwood administrative offices, and Elmwood solar bus storage facility. Improvements include security enhancements, roof replacements, and repairs to building systems.

### **Preventative Maintenance**

RIPTA uses federal funds to support ongoing maintenance of federally-funded assets through the Preventive Maintenance program. RIPTA anticipates continuing to use Preventive Maintenance funds to support maintenance department salaries, maintenance supplies, and contracted work such as elevator repair, inspection of generators, and repairs to bus lifts.

### **Intelligent Transportation System Upgrades**

This program funds the purchase of a variety of Intelligent Transportation System (ITS) equipment, including both regular replacement of standard information systems as well as upgrades associated with increasing operational efficiency and improved communications.

### **Equipment and Supplies**

This item funds replacement of support equipment, capital supplies and non-revenue vehicles.

### **Program Funding and Structure**

Transit Capital projects are funded with a combination of federal, state and local funds. Federal funds typically

come from the Federal Transit Administration or USDOT's CMAQ program. These programs provide as much as 80% of the cost of a given capital project.

Local match varies by type of project. Match for bus purchases is currently funded with RICAP funds. Paratransit vans are matched by the Paratransit Revolving Loan Fund, which is seeded by a fee charged to users of the program. Facilities improvements have been matched by RICAP funds, municipalities, non-profits, or RIPTA's operating budget. Local organizations are most likely to be involved in passenger facility improvements with a direct local benefit. In contrast, upgrades to maintenance facilities are typically matched through RIPTA's operating budget, with some assistance from RICAP for security projects.

Note that RIPTA's capital needs outstrip available funds. To meet the fiscal constraints of the first four years of the STIP, capital expenses were reduced by the amount required to meet federal revenue projections.

### **Project Criteria and Selection**

When FTA programs fund specific federally-mandated uses, projects are prioritized through a required selection process. For example, the Paratransit Vehicle replacement project funded by Section 5310 funds is prioritized in the Human Services Coordinated Plan. Rural service funded by the Section 5311 program is prioritized through consultation with Intercity bus carriers.

Image 11: View of the IWay in Providence

credit: RIDOT

Other projects are selected through an annual capital budget process that is augmented by long-term capital plan and a fleet plan that includes vehicle replacements through FY 2030. These plans are based on asset condition and life-expectancy. The agency is currently developing an asset management plan that will include life-cycle costs analysis. These trends are in keeping with asset management requirements expected from the FTA in coming years.

The annual capital budget process has the following steps: Departments submit budget requests that are matched to available funds and prioritized by year. A detailed budget is prepared, presented to the CEO, and brought to the Board of Directors for approval. The budget and Capital Improvement Plan (CIP), including any requests for state match, are submitted to the State Budget Office for inclusion in the State Capital Improvement Plan. The CIP and fleet plans are used as a basis for the TIP request.

## Other Transit Initiatives

The following transit programs are funded through the Congestion Mitigation and Air Quality (CMAQ) program. RIPTA uses CMAQ funds to support key goals that are not eligible under FTA programs, such as R-Line service and promotion of transit programs; as well as for capital improvements that enhance the passenger experience of transit.

### Transit Service Initiatives

CMAQ transit service initiative funds are used to support continuing operations of the R-Line and to defray three years of the cost of new pilot service projects. The R-Line connects downtown Pawtucket to the Providence Train Station and Broad Street in South Providence. Through a combination of elements to improve service, passenger travel time and air quality benefits are realized. Elements include signal priority, artist-designed station improvements, improved stop spacing, and branded vehicles. New services will be developed as needed, bringing service to key areas of need such as Quonset Business Park.

### Passenger Initiatives

CMAQ funds are used to support multiple modes of transit through promotion of commuter rail, bus, and alternative transportation. Funds are used towards distribution of timetables and transit marketing materials at intermodal facilities, on the web, and other key points within the state's transportation network.

## Capital Enhancements

CMAQ capital enhancement funds are used to support programs that attract riders by bringing new amenities to transit stations and transit service. Funds may be used to invest in traffic signalization technology that reduces travel time by allowing RIPTA vehicles to extend green lights. In addition, funds were used by RIPTA to develop a comprehensive passenger experience enhancement program during 2015. Investments are planned for implementation of that program over the next several years.

## Commuter Resources

CMAQ passenger initiatives funds are used to support promotion of transit ridership as an alternative to single occupancy vehicles. The program includes commuter outreach and education, promotion of EcoPass and other transit incentive programs, and transit fare subsidies through targeted "Try Transit" or similar efforts during seasons of elevated ozone levels.

## Program Funding and Structure

The programs included in this section are funded by Federal Highway's Congestion Mitigation and Air Quality program. Projects are used to support promotion of transit ridership as an alternative to single occupancy vehicle use.

## Project Criteria and Selection

RIPTA, RIDOT, RIDEM, SPP and members of a Transit Subcommittee to the TAC meet to review and rank transit projects. Priority projects that fit the program requirements established by USDOT for the Congestion Mitigation and Air Quality program are funded using this source. These federal funds are intended to reduce air pollution by:

- Investing in capital infrastructure that reduces reliance on single occupancy vehicles;
- Making technical improvements that reduce pollution emissions; or
- Funding transit services that may serve as an alternative to single occupancy vehicle commute.

Service funding is limited to three years, with the exception of services operating in 2012. In Rhode Island, services that are eligible for these funds indefinitely are the Providence to Warwick Commuter Rail and the R-Line bus service.

## ANALYSIS OF THE TIP

Surface transportation in Rhode Island is supported by federal funding assistance from USDOT, primarily from FHWA and FTA. The purpose of the STIP is to program those funds that are reasonably expected to be available, from FTA and FHWA, along with the required state match, across the years of the STIP. While the STIP may include additional information and proposed expenditures of other funding sources, it is, with a few exceptions (e.g. projects of regional significance, etc.) only the programming of federal funding sources and their required state match that is required to meet federal regulations.

Additionally, federal regulations require that the STIP cover a period of no less than four years and be updated at least every four years. When a STIP covers more than four years, as this STIP does, USDOT considers the projects in the additional years as informational only. Projects listed beyond the first four fiscally constrained years of the STIP cannot be advanced without a STIP amendment. Therefore, the following analyses will primarily focus on projects and investments outlined in required fiscally constrained four years of FFY 17-20.

## INVESTMENT AREAS

Between FFY 2017 and FFY 2020, the state anticipates \$2.1 billion in federal funding with its required state match. Rhode Island uses this funding to invest in several modes of surface transportation.

Highways remain the primary mode of travel in Rhode Island. Highway projects continue to receive the greatest share of STIP resources.

### System Expansion

As outlined in previous sections, the vast majority of the STIP is dedicated to asset management, keeping and maintaining the state's existing infrastructure in a state of good repair. There is a small number of projects that add capacity to the system through the addition or expansion of new facilities and services in the Transportation Alternatives and Transit categories. These system expansion projects total approximately \$40.5 million, about 2% of the STIP's total funding between FFY 17-20.

Figure 19: Total Transportation Funding FFY2017-2020: By Year, Source, and Mode

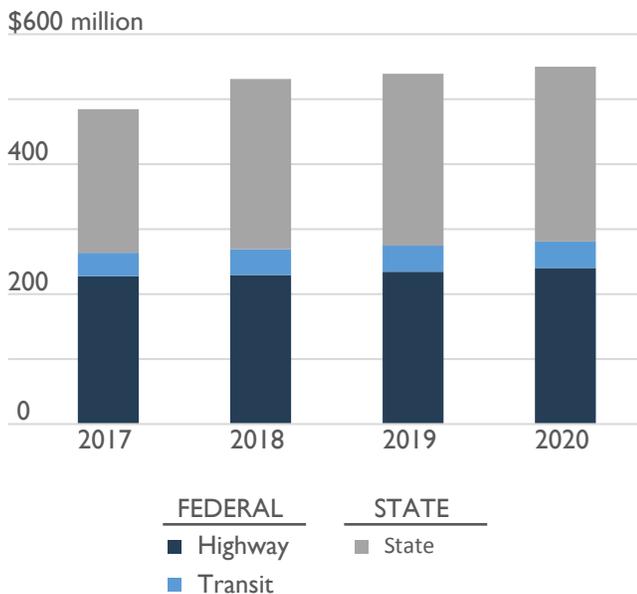

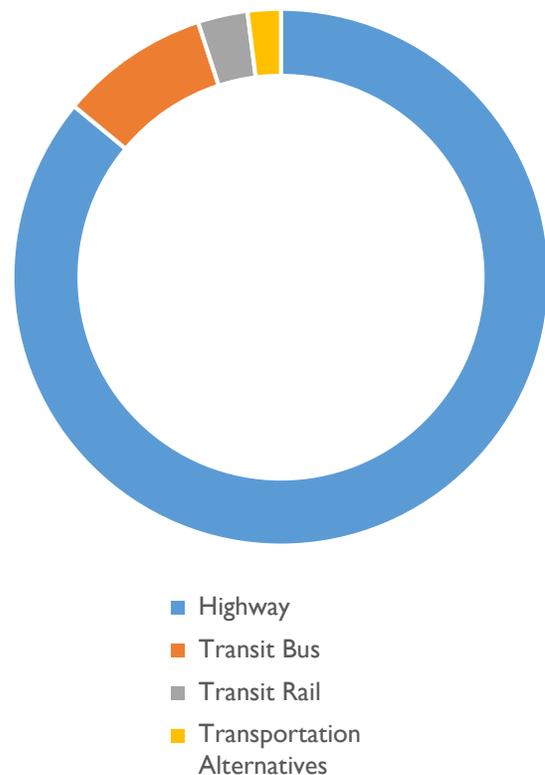

Figure 20: Funding by Mode FY 2017-2020

## System Preservation

System Preservation activities comprise 61% of the STIP, compared with 55% of the FFY 13-16 STIP and 41% of the FFY 09-12 STIP. This investment in system preservation reflects the state's shift toward an asset management based system of transportation planning, which focuses the state's limited resources on bring the existing infrastructure assets into a state of good repair and maintaining them in that condition.

## FISCAL CONSTRAINT

Federal regulations require that the STIP be fiscally constrained, which means that the STIP may only include a project if full funding can reasonably be available for the project within the time period contemplated for completion. Separate fiscal constraint analysis were developed for the funds directed to RIDOT and funds directed to RIPTA. This fiscal constraint analysis has been based on the following principles:

- The state categorizes approximately 3% of FHWA funds apportioned to Rhode Island under the FAST Act as likely to be held back by Congress due to spending limitations or reduction of revenue estimates. This issue does not apply to Federal

Figure 21: STIP Funding by Program FFY 2017-2020

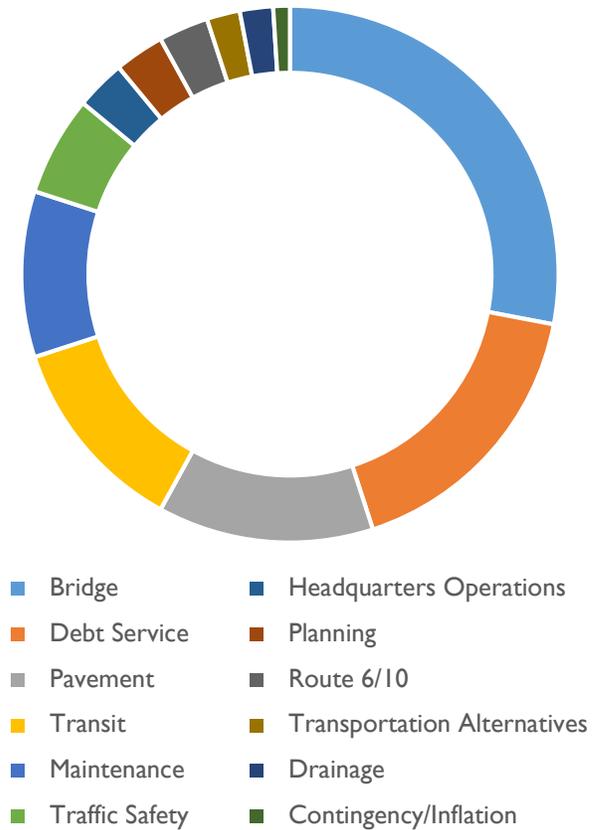

Figure 22: System Expansion Funding FFY 2017-2020 By Mode

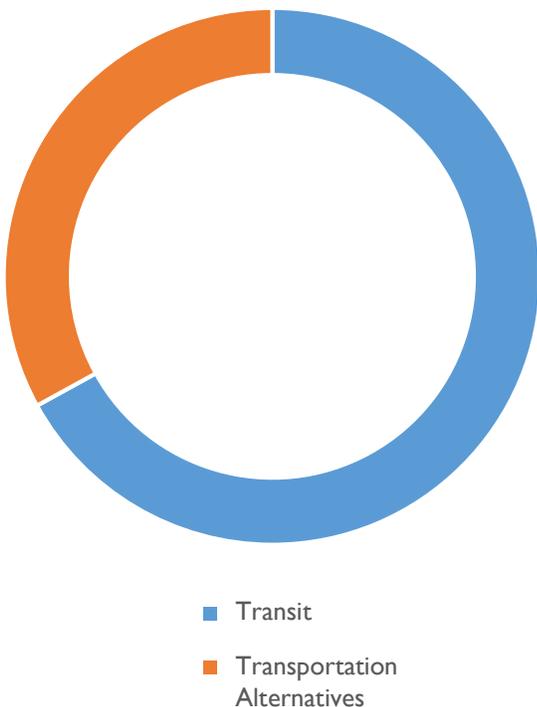

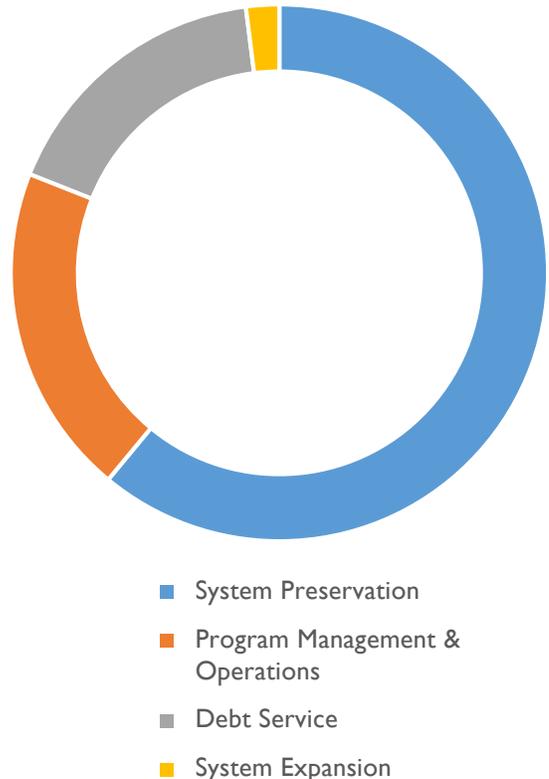

Figure 23: STIP Funding FFY 2017-2020 By Investment Type

Transit Administration funds, which are made available in grants after official apportionments have been published.

- FTA funding levels published in the FAST have been used based on the historic average splits used to divide up urbanized area funding when applicable.
- The state funding available to match federal funding for the FFY 17-20 program is specified in the annual Appropriations Act (the Budget), as enacted by the General Assembly, and/or in the State's Five Year Capital Budget. Gas tax revenues are projected by the Office of Revenue Analysis in the Department of Revenue twice annually, and Highway Maintenance account revenues are projected by the consensus forecast of the State's Revenue Estimating Conference, which also takes place twice a year, in May and November, and is comprised of the House Fiscal Advisor, Senate Fiscal Advisor, and the State Budget Officer. Toll revenue/revenue reimbursed by tolls was projected using data developed by RIDOT staff, in conjunction with a consultant with experience in tolling processes and revenue projections. This toll revenue/revenue reimbursed by tolls is conservative and will be further refined through a Level 3 (investment grade) traffic and revenue study. RIPTA fare box revenue is projected

using a 1.5% growth rate reflecting the long term historical growth in passenger revenue.

- Toll credits are calculated based on RITBA capital expenditures and RIDOT capital expenditures using toll revenue/revenue reimbursed by tolls for federally-eligible expenses and may be used to lower the non-federal match requirements of a project, provided that the credits are approved by FHWA and a balance of toll credits is available. For example, if a project would normally be eligible for funding at an 80% federal/20% state ratio, toll credits could reduce or eliminate the state share required, but the cost of the project would remain unchanged. Toll credits are not shown separately in the fiscal constraint analysis because they are not a funding source.

## FISCAL CONSTRAINT ANALYSIS RIDOT LED INITIATIVES

In order to assure that the STIP program is fiscally constrained, it is necessary to show that the STIP projects can be implemented with categorical funding likely to be available to the state. Although the fiscal constraint analysis is only required to show the federal expenditures and the required state match for those expenditures, this analysis does include an overview of RIDOT's operating and capital program.

Image 12: Replacement of the Stillwater Viaduct

credit: RIDOT

## Fiscal Constraint

The tables below outline all the federal and state resources reasonably expected to be available to RIDOT between FFY 17-20 as well as its expenditures.

The tables show that fiscal constraint is maintained within the RIDOT led program.

Table 3: RIDOT Funding Sources FFY 2017-2020

Highway - State	FY 2017	FY 2018	FY 2019	FY 2020	4-Year Total

## FISCAL CONSTRAINT ANALYSIS RIPTA LED INITIATIVES

In order to assure that the STIP program is fiscally constrained, it is necessary to show that the STIP projects can be implemented with categorical funding likely to be available to the state. The analysis above conducted for RIDOT gave an overview of the capital and operating program for the agency. RIPTA's program is also financed through state funding and federal funding, but unlike RIDOT, funds are also derived from service contracts and fare revenue. Periodically, general fare increases are instituted; base fares were last raised in 2010. In 2016, RIPTA began charging a \$0.50 fare for elderly and disabled riders and increased the price of a transfer ticket, 7-Day Pass and Monthly Pass but held the base single trip fare steady at \$2.00.

In addition to fare revenue, RIPTA's operations are supported by gas tax and highway maintenance funds from the state and, where eligible, federal sources.

Table 5: RIPTA Operating Revenue FFY 2017-2020, shows current estimates for the Operating budget revenues. While RIPTA's operating budget is not the subject of this fiscal constraint analysis, it is an important piece of the transportation funding conversation that should be understood within the context of this STIP and its financial analysis.

Demand for RIPTA service continues to rise; RIPTA ridership has grown by 14% over the past five (5) years despite keeping service hours level. As demand has risen, so has the cost of providing service. Labor costs, fuel volatility, and decreases in the revenue generated by the gasoline tax have occasionally created operating budget deficits. Avoiding the deficits RIPTA currently predicts in 2017 and beyond will involve carefully balancing service levels against the need and desire to expand transit services throughout the state. Using federal funds to support eligible operating costs requires tradeoffs for capital investments to support state of good repair, fleet expansion and passenger improvements.

Table 5: RIPTA Operating Revenue FFY 2017-2020

Revenue Type	FY 2017	FY 2018	FY 2019	FY 2020	4-Year Total
Passenger Revenue	\$23.8	\$24.2	\$24.6	\$24.9	\$97.5
Gasoline Tax Revenue	\$45.7	\$45.3	\$45.1	\$44.8	\$180.9
State Highway Fund Revenues	\$4.0	\$4.4	\$4.4	\$4.4	\$17.2
Advertising	\$0.7	\$0.7	\$0.7	\$0.7	\$2.9
Federal Reimbursements	\$22.5	\$22.9	\$23.5	\$24.1	\$93.2
Other	\$11.4	\$11.4	\$11.4	\$11.4	\$45.4
<b>Total Operating Revenue</b>	<b>\$108.1</b>	<b>\$109.0</b>	<b>\$109.7</b>	<b>\$110.3</b>	<b>\$437.1</b>
<b>Operating Expenses</b>	<b>\$109.6</b>	<b>\$116.0</b>	<b>\$118.5</b>	<b>\$121.1</b>	<b>\$465.3</b>
<b>Operating Surplus/(Deficit)</b>	<b>(\$1.5)</b>	<b>(\$7.0)</b>	<b>(\$8.8)</b>	<b>(\$10.8)</b>	<b>(\$28.2)</b>

## Fiscal Constraint

The tables below outline all the federal and state resources reasonably expected to be available to RIPTA between FFY 17-20 as well as its expenditures.

The tables show that fiscal constraint is maintained within the RIPTA led program.

Table 6: RIPTA Funding Sources FFY 2017-2020

Transit - State	FY 2017	FY 2018	FY 2019	FY 2020	4-Year Total
RICAP - Vehicle Match	\$1.1	\$1.8	\$1.8	\$1.8	\$6.6
RICAP - Capital Match	\$0.1	\$0.1	\$0.1	\$0.1	\$0.5
Capital Revolving Loan Fund	\$0.3	\$0.3	\$0.3	\$0.3	\$1.0

# TRANSPORTATION EQUITY BENEFIT ANALYSIS

## THE TEBA - ENVIRONMENTAL JUSTICE & TITLE VI

The State of Rhode Island is committed to environmental justice and the equitable distribution of transportation projects and investments. To document the distribution of programmed project investments, the state has developed a Transportation Equity Benefit Analysis, or TEBA, for this STIP. The select population groups within the TEBA are either directly protected under Title VI of the Civil Rights Act of 1964, or may be linked to protected populations under Title VI.

### Objective

The goal of the TEBA is to assess the distribution of transportation investments across select population groups for Federal Fiscal Years 2017 - 2020 of the STIP. The first step in the analysis was the development of a population identification component. The second step of the analysis involved pairing population data with STIP project data. For the full Transportation Equity Benefit Analysis, please reference Appendix A of this STIP document.

## POPULATION IDENTIFICATION

### Overview

In an effort to provide the most thorough TEBA, the population identification component was conducted in two parts:

Data collection and research on equity and its pertinence to federal statutory requirements and Executive Orders, focused on the following select population groups:

1. Minority, and
2. Low-income populations

Data collection and research on other select population groups protected from discrimination under federal laws that influence transportation decision-making:

3. School-age Children (ages 5-19)
4. Aging individuals ( $\geq 65$ )
5. Individuals with a disability
6. Individuals with limited English proficiency (LEP)

The top five LEP language groups in Rhode Island were also included within the analysis:

- 6.1 Spanish or Spanish Creole
- 6.2 Portuguese or Portuguese Creole
- 6.3 Chinese
- 6.4 French Creole
- 6.5 Mon-Khmer, Cambodian

### Methodology

#### Population Identification Overview

The six select population groups (SPG) in the population identification component were analyzed using U.S. Census Bureau data. The data includes statistics for state total counts and select population group totals. The state total values and the SPG population values were used to generate state averages and thresholds to quantify significant SPG presence.

#### Select Population Group Data Table

Data collection gathered in the population identification component prompted the development of Table 8: Select Population Group Figures, which consists of SPG totals and percentages in RI. Table 9: Presence of Select Population Groups in Rhode Island, includes data illustrating the number of Census tracts in the state with SPG populations at or above the state average or applicable threshold.

#### Thresholds

The RISPP developed thresholds in an effort to create a metric or screening tool to identify populations with a “significant presence.” The numeric thresholds used to quantify a significant presence of each select population group vary per indicator. A “greater than or equal to the state average” threshold was used to quantify a significant presence within RI Census tracts for five of the six select population groups. The threshold was utilized with the goal of identifying concentrated select population groups based on state averages, without the intent of overlooking any “readily identifiable” populations. Safe Harbor thresholds were applied to the sixth select population group, individuals with limited English proficiency. Safe Harbor thresholds, which “constitute five percent or 1,000, whichever is less, of the population of persons eligible to be served or likely to be affected or encountered,” were used in order to ensure increased inclusivity. While Safe Harbor thresholds are typically applied to written documents, the goal of the threshold remains within this analysis: to identify those

Table 8: Select Population Group Figures

Group Code	Select Population Groups (SPG)	Total RI Population within the data source	Total SPG Population in RI	Percentage of RI Population	
1	Minority Individuals	1,052,567	248,882	23.6%	
2	Individuals in Poverty/Low-Income (200% of Poverty Level)	1,012,806	310,086	30.6%	
3	School-Age Children (Ages 5-19)	1,052,567	204,310	19.4%	
4	Aging Individuals (≥65)	1,052,567	151,881	14.4%	
5	Individuals with Disability	1,037,156	133,024	12.8%	
6	Individuals with Limited English Proficiency (All Languages)	997,740	84,851	8.5%	
Top 5 Limited English Proficiency Language Groups in RI	6.1	Spanish or Spanish Creole Language Group	997,740	48,872	4.9%
	6.2	Portuguese or Portuguese Creole Language Group	997,740	12,291	1.2%
	6.3	Chinese Language Group	997,740	3,616	0.4%
	6.4	French Creole Language Group	997,740	2,610	0.3%
	6.5	Mon-Khmer, Cambodian Language Group	997,740	2,397	0.2%

Table 9: Presence of Select Population Groups in Rhode Island

Group Code	Select Population Groups (SPG)	Significant Presence Threshold*	Number Tracts that Meet Threshold	Percentage of Total Census Tracts**
1	Minority Individuals	≥ 23.6% SA	79	32.8%
2	Individuals in Poverty/Low-Income (200% of Poverty Level)	≥ 30.6% SA	95	39.4%
3	School-Age Children (Ages 5-19)	≥ 19.4% SA	92	38.2%
4	Aging Individuals (≥65)	≥ 14.4% SA	116	48.1%
5	Individuals with Disability	≥ 12.8% SA	121	50.2%
6	Individuals with Limited English Proficiency (All Languages)	≥ 5% of all LEP Language Tracts in RI	69	28.6%
Top 5 Limited English Proficiency Language Groups in RI	6.1	Spanish or Spanish Creole Language Group	57	23.7%
	6.2	Portuguese or Portuguese Creole Language Group	21	8.7%
	6.3	Chinese Language Group	4	1.7%
	6.4	French Creole Language Group	2	0.8%
	6.5	Mon-Khmer, Cambodian Language Group	2	0.8%

\* Significant Presence Threshold is the threshold that quantifies whether there is a significant presence of the select population group within a census tract. “SA” is an abbreviation of state average.

\*\* The total number of census tracts within RI, excluding water-only tracts, is 241 tracts. There are a total of 244 U.S. census tracts in the State of Rhode Island, however 3 tracts cover water only and not land and as such were not included in the analysis.

Table 10: Select Population Group Data Sources

Group Code	Select Population Groups (SPG)	Data Source	
1	Minority Individuals	2010 Census	
2	Individuals in Poverty/Low-Income (200% of Poverty Level)	2014 5-year ACS	
3	School-Age Children (Ages 5-19)	2010 Census	
4	Aging Individuals (≥65)	2010 Census	
5	Individuals with Disability	2014 5-year ACS	
6	Individuals with Limited English Proficiency (All Languages)	2014 5-year ACS	
Top 5 Limited English Proficiency Language Groups in RI	6.1	Spanish or Spanish Creole Language Group	2014 5-year ACS
	6.2	Portuguese or Portuguese Creole Language Group	2014 5-year ACS
	6.3	Chinese Language Group	2014 5-year ACS
	6.4	French Creole Language Group	2014 5-year ACS
	6.5	Mon-Khmer, Cambodian Language Group	2014 5-year ACS

populations with limited English proficiency using a threshold that is both inclusive, and identifies multiple language groups within a given geography.

### SPG Tracts

A SPG tract is a select population group Census tract that hosts a “greater than or equal to the state average” concentration of each select population group, or greater than or equal to Safe Harbor thresholds for the limited English proficiency SPG.

### Data Sources

The U.S. Census Bureau provides two key data sets used in this analysis, which are illustrated in Table 10: Select Population Group Data Sources.

#### Decennial Census

The 2010 decennial Census, which is a 100 percent count of all persons in the United States, was utilized in this analysis to identify select population groups.

#### American Community Survey (ACS)

The U.S. Census Bureau’s American Community Survey (ACS) is an annual sample-based survey of the United States population. The RISPP utilized the most recent 5-year estimates completed in 2014. The ACS is based on sample data, or a “snapshot,” collected by the U.S. Census Bureau (as opposed to 100 percent counts of the population in the decennial Census). As a result,

there are various margins of error associated with select population group averages where ACS data is utilized.

### Population Totals

Due to the use of multiple data sources, ACS tables, and the desire to use the most recent and accurate data available per population group analyzed, the total population totals vary per select population group.

### Mapping

Using the data compiled within the SPG tables (Table 8: Select Population Group Figures and Table 9: Presence of Select Population Groups in Rhode Island), RISPP used geographic information system (GIS) software to identify the locations of concentrated select population groups and designated SPG tracts: These maps are included within the mapping component of the full Transportation Equity Benefit Analysis, in Appendix A of this STIP document.

### Findings

The population identification component of the TEBA suggests Rhode Island’s highest state averages among the select population groups (SPG) include the low-income population group (30.6% of RI’s population) and the minority population group (23.6% of RI’s population).

The select population group with the greatest Census tract representation in the state is the individuals with

a disability SPG, with a significant presence in 121 of RI's 241 Census (land) tracts, or 50.2% of RI's Census tracts. There are several other SPG tracts representing significant SPG presence among the following populations: aging individuals (48.1% of RI tracts), individuals in poverty/low income (39.4% of RI tracts), school-age children (38.2% of RI tracts) and minority individuals (32.8% of RI tracts).

## THE TRANSPORTATION EQUITY BENEFIT ANALYSIS

### Analysis Overview

For the TEBA, RISPP paired select population group data and locations with STIP project locations and investments to assess the distribution of transportation projects and funds.

### Selected Projects and Funding Programs

The TEBA utilized project costs within seven of the STIP's funding programs to pair with select population group data. All projects with site specific physical locations, and funded at any point between FFY2017-2020 were included within the analysis. Project data within the following seven funding programs were highlighted within the analysis:

- Bridge Capital Improvement Program,
- Pavement Capital,
- Traffic Safety Capital Program,
- Drainage Capital Program,
- Transportation Alternatives,
- 6/10 Project, and
- Transit Capital Program - RIDOT

Administrative costs and statewide line items without a physical location were not identified in this geographically driven analysis.

### Dividing Investments Based on Location

Most projects had an investment value associated with a single location, located in a single Census tract. However, there were a limited number of instances in which an individual project occurred in multiple Census tracts: These instances prompted RISPP to develop a method to use in splitting the investments associated with each project.

In instances where a project overlapped neighboring tracts relatively equally (ex. half of a road in one tract,

the other half in another tract), the investment associated with that project was split equally between both Census tracts. In instances where a mapped project overlapped a neighboring Census tract by more than half, or greater than 50%, funding was allocated in full to the tract which held the majority of the project in an effort to avoid overlap in the allocation of investments. In instances where a mapped project occurred in several different locations, project funds were divided by the number of mapped locations and split. For example, if a project had an investment of \$100,000 and featured points in a Johnston tract and a Pawtucket tract, \$50,000 was allocated to each tract.

### Utilizing Data With Caution

While each of the above situations did occur periodically in the mapping and data analyzation process within the TEBA, it should be noted that these examples represent a minimal number, approximately 30, amongst the hundreds of projects analyzed. However, RISPP utilized these methods carefully to ensure that projects and investments were not counted multiple times. The RISPP concluded that these methods were the least invasive in keeping the integrity of the data.

### Combining SPG and STIP Projects and Investments

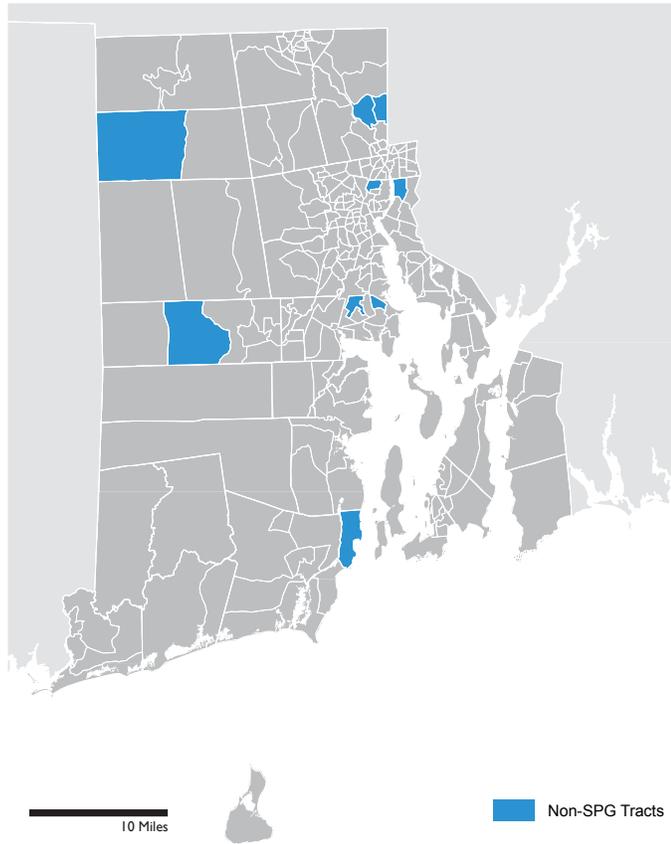

Using the SPG and the STIP project data (number of projects and investment per project) within each of the seven programs outlined above, RISPP created data tables identifying the distribution of projects and project investments in tracts for each SPG (Tables 9 through 14) and a summary table with SPG tracts and allocated investments (Table 15).

### Findings

The goal of the TEBA is to assess the distribution of transportation investments across select population groups for Federal Fiscal Years 2017 - 2020 of the STIP. The RISPP has compiled overall findings for the school-age children, aging individuals, individuals with a disability and individuals with limited English proficiency select population groups within the analysis. In addition, RISPP completed a targeted analysis focused on minority individuals and individuals in poverty/low-income. The aforementioned groups are protected under Executive Order 12898 - Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations.

Of the 241 Census tracts considered in the TEBA analysis, there are 9 without SPG tract designation,

Figure 24: SPG Tracts and Non-SPG Tracts

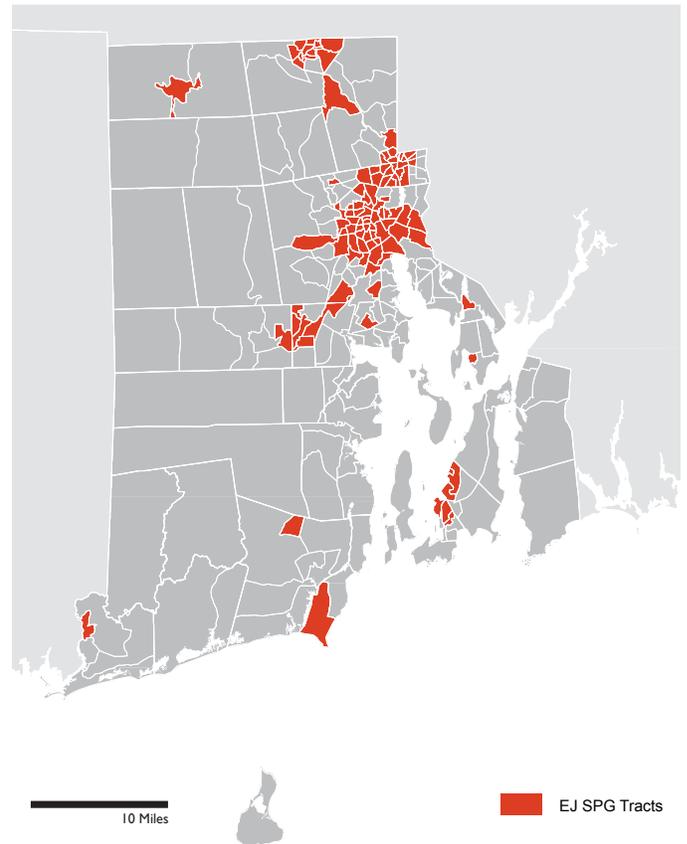

which suggests that 232 or 96% of RI’s Census tracts are designated as select population group tracts from one or more select population groups (see Figure 24: SPG Tracts and Non-SPG Tracts on page 65). The aforementioned finding suggests that the state has widespread, elevated levels of one or more select population groups.

**Key Findings: Select Population Groups**

Based on the data within Table 17: Summary Table of SPG Tracts and Allocated Investments, it appears that the percentage of STIP project funding allocated to select population group tracts exceeds the percentage of tracts identified as SPG tracts in the State of Rhode Island for all select population groups.

Of all RI tracts, 38.2% are school-age SPG tracts, and 64.9% of all STIP project funds between FFY 2017-2020 have been allocated to tracts meeting the SPG threshold. The trend of elevated percentages of funds allocated to SPG tracts repeats for the aging, individuals with a disability and individuals with limited English proficiency SPG tracts. Of all RI tracts, 48.1% are aging SPG tracts with 62.6% of STIP project fund allocation. The individuals with disabilities SPG tracts represent 50.2% of RI tracts, with 57.5% of STIP project funds

Figure 25: Environmental Justice SPG Tracts

reaching those SPG tracts. Finally, the individuals with limited English proficiency SPG tracts comprise 28.6% of all RI tracts, and include 35.6% of STIP project fund allocation.

**Key Findings: Environmental Justice (EJ)**

Environmental justice populations are specifically protected and defined by Federal Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations. The executive order requires MPOs to evaluate their plans and programs for environmental justice sensitivity.

The RISPP utilized Table 17: Summary Table of SPG Tracts and Allocated Investments, to assess minority and individuals in poverty/low-income SPG tracts.

The assessment highlighted the following findings. Of all RI tracts, 32.8% are minority SPG tracts, and 39.4% of all STIP project funds between FFY 2017-2020 have been allocated to minority tracts meeting the SPG threshold. The SPG tracts for individuals in poverty/low income represent 39.4% of tracts in the state, and have 44.6% of project funds allocated to them from all STIP project funds.

Table 11: Distribution of Projects and Project Investments in Tracts with a Significant Presence of Minority Individuals

6/10 Project	\$59.02	\$59.02	100.0%
Transit Capital Program - RIDOT	\$21.10	\$21.10	100.0%
<b>Total</b>	<b>\$652.74</b>	<b>\$320.20</b>	<b>49.1%</b>

\* For the Transportation Investment portion of the analysis, projects included in the STIP federal fiscal years 2017-2020 were used. The “total cost of all projects” excludes projects that are not site specific.

After evaluating the groups as two individual select population groups, the RISPP combined minority and individuals in poverty/low-income SPG tracts to assess tracts with significant representation from one, or both EJ populations. For this portion of the analysis, tracts with significant representation of one or both EJ population groups will be referred to as environmental justice, or EJ SPG tracts. Figure 25: Environmental Justice SPG Tracts on page 65 illustrates all environmental justice SPG tracts in the state. In instances where there was representation from both select population groups that met their respective SPG tract thresholds, tracts were counted once to eliminate overlap. RISPP analyzed the funding associated with the EJ SPG tracts throughout the state by specific STIP funding program. The results of this analysis can be found in Table 18: Environmental Justice SPG Tract

Funding Summary. There are a total of 105 EJ SPG tracts in RI, or 43.5% (105/241 tracts). The total percentage of all STIP project funds allocated to EJ SPG Tracts (49.1%) exceeds the percentage of designated EJ SPG tracts throughout RI (43.5%). Furthermore, almost half of the percentage of all STIP site specific project funds allocated to SPG Tracts reach environmental justice select population group tracts.

### Transit Access Analysis

In addition to evaluating the select population groups, RISPP had an interest in evaluating carless households. Carless households, in particular, may be dependent on public transportation for their transportation needs. Therefore, in an effort to evaluate transit access for Rhode Island’s carless households, RISPP conducted a transit access analysis. Additionally, RISPP included each of the

select population groups in the transit access analysis, as individuals within the select population groups may also rely upon transit services. The RISPP generated Table 19: Transit Access Summary, by mapping RIPTA bus routes with each set of SPG tracts to evaluate transit access across all SPG in Rhode Island.

### Select Population Groups

All select population groups, with the exception of carless households, were previously identified within this analysis. The RISPP used 2014 ACS 5-Year data to determine the total number of households in RI (409,569) and the total number of carless households (40,203) to calculate the state percentage of carless households (9.8%). Of RI's 241 tracts, 99 or 41.4% of tracts have significant presence of carless households, and as shown in Figure 26: Carless Household SPG Tracts, are designated as carless household SPG tracts.

### Key Findings: Transit Access Analysis

One of the key findings within the transit access analysis includes the percentage of carless household SPG tracts intersecting RIPTA bus routes. Of the 99 carless household SPG tracts in the state, 97 tracts, or 98% of tracts intersect with RIPTA routes.

In addition, for each of the select population groups, the number of SPG tracts intersecting RIPTA routes yield high percentages in relation to the total number of SPG tracts per identified population group. Percentages of SPG tracts intersecting RIPTA routes range from the high eighties to the high nineties for each group. Eighty-seven percent of aging SPG tracts intersect with RIPTA routes, while 99% of minority, poverty/low income,

and a combination of both population tracts (EJ tracts) intersect with RIPTA bus routes.

### Conclusion

Of all the tracts in Rhode Island, 96% are SPG tracts, some of which meet the threshold designation with the presence of more than one select population group. The RISPP has compared the geographic presence of select

Figure 26: Carless Household SPG Tracts

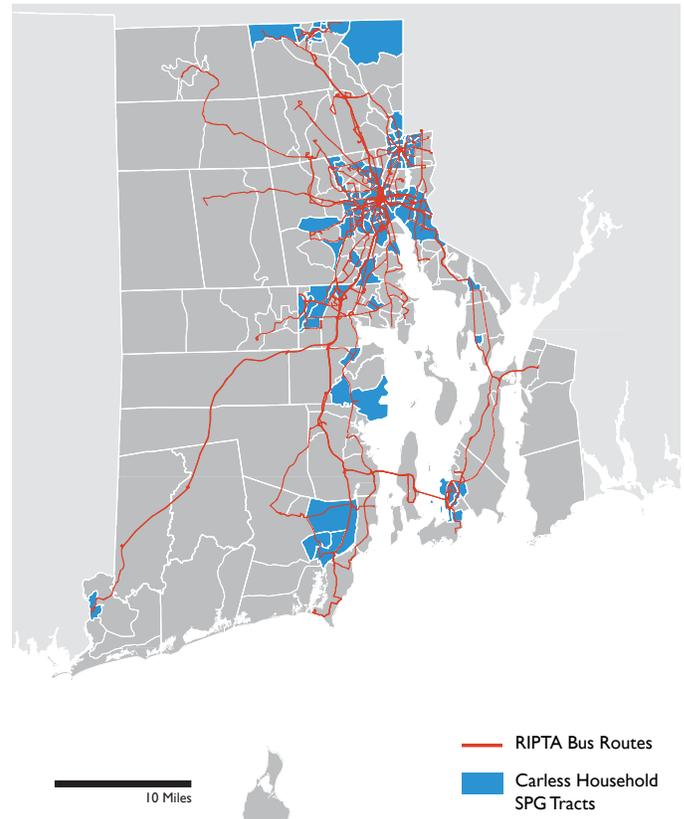

Table 19: Transit Access Summary

STIP Funding Program	Total SPG Tracts	Number of SPG Tracts Intersecting RIPTA Routes	Percentage SPG Tracts Intersecting RIPTA Routes
1. Minority Individuals	79	78	99%
2. Individuals in Poverty/Low-Income	95	94	99%
Environmental Justice Tracts	105	104	99%
3. School-Aged Children (Ages 5-19)	92	84	91%
4. Aging Individuals (≥ 65)	116	101	87%
5. Individuals with a Disability	121	117	97%
6. Individuals with LEP	69	67	97%
7. Carless Households	99	97	98%

population groups throughout the state with STIP project investments and locations between FFY 2017-2020. Each of the select population groups have percentages of funding which exceed their SPG tract representation throughout the State of Rhode Island. In an effort to highlight data from select population group tracts that are more geographically concentrated, RISPP analyzed environmental justice SPG tracts as well: A major finding concludes that almost half of the STIP project funds (49.1%) reach minority and low-income/poverty SPG tracts, or tracts representing both populations in RI.

Finally, RISPP recognized the importance of evaluating access to public transportation, added the carless household SPG, and conducted a transit access analysis to determine the percentage of SPG tracts intersecting RIPTA bus routes. The key finding within that analysis is that the majority of all SPG tracts intersect RIPTA bus routes. For the carless households SPG, 98% of all carless household SPG tracts intersect with RIPTA bus routes. Public transit services serve a critical role in providing access to the community as a whole, and especially to those select population groups, such as carless households, which may be reliant on transit services. In addition, investments made in roadways, bridges and other transportation infrastructure enhance the transportation system as a whole, benefiting all residents and visitors alike in their travel throughout the state.

## CLIMATE CHANGE

The 2014 National Climate Assessment projects that the heat-trapping effects of greenhouse gas emissions will cause temperatures in the United States to rise in coming decades. These higher temperatures contribute to shifts in precipitation patterns, rising sea levels, and changes in extreme weather events, which vary by region. In the Northeast region, the assessment notes that, “Between 1895 and 2011, temperatures in the Northeast increased by almost 2°F (0.16°F per decade), and precipitation increased by approximately five inches, or more than 10 percent (0.4 inches per decade). Coastal flooding has increased due to a rise in sea level of approximately 1 foot since 1900.”<sup>1</sup> These trends are projected to continue. Increased precipitation, high heat, increased incidence of powerful storm events, and sea level rise are some of the effects that Rhode Island can expect to experience from climate change in the coming years. The assessment also describes how extreme weather is likely to strain many regions’ transportation, communications, energy,

and water and waste infrastructure. Flooding and sea level rise can disrupt the functioning of transportation infrastructure and equipment through inundation. Repeated flooding and saltwater corrosion can cause longer-term problems by requiring more frequent maintenance and aging infrastructure is particularly vulnerable. Storms can disrupt service due to debris and safety concerns. The State of Rhode Island is already experiencing some of the effects of climate change and will continue to do so, necessitating the consideration of its current and future effects in transportation and infrastructure planning. There is also an opportunity to mitigate future effects of climate change to help avoid or reduce the impacts to the greatest extent possible through reducing vehicle emissions.

## Mitigation

The Transportation Sector contributes the largest percentage of carbon dioxide emissions in Rhode Island. As the state looks to decrease its carbon emissions, it will need to address how it will lower vehicle emissions. This can be done through a variety of means, but reducing Vehicle Miles Traveled (VMT) is one of the soundest strategies for doing so. The state has included actions to reduce VMT (in single occupancy vehicles) in its land use and transportation plans. This has now become a critical challenge for climate change mitigation, not just in Rhode Island, but throughout the country. The state will evaluate the pros and cons of various options (for example, shifting to electric, alternative fuel strategies, increasing public transportation, and other VMT reduction techniques) as part of its greenhouse gas emission reduction study currently underway.

## Adaptation

As a state with over 400 miles of coastline, coastal hazards are of particular risk to the state’s transportation infrastructure. Sea level rise (SLR) and the gradual increase in high tides have been occurring for decades. International, national, and Rhode Island-based experts agree that the rate of rise will increase over coming decades. Sea level rise, as opposed to storm surge or other flooding, is a long-term, permanent trend with implications for our coastal transportation infrastructure as well as coastal residential communities and other infrastructure that serves residents and commerce.

In January of 2015, the Statewide Planning Program released Technical Paper 164 titled Vulnerability of Transportation Assets to Sea Level Rise. The study analyzed the transportation assets at risk under 1, 3, and 5 feet of sea level rise. Using a GIS-based

<sup>1</sup> Melillo, J.M., Terese (T.C.) Richmond, and G. W. Yohe, Eds. Climate Change Impacts in the United States: The Third National Climate Assessment. Ch. 16: Northeast. U.S. Global Change Research Program, 2014. p. 373. <http://nca2014.globalchange.gov/report/regions/northeast>.

methodology, the project finds that every coastal Rhode Island community will experience impacts to their transportation infrastructure due to sea level rise. 2.3 miles of roadway are expected to flood at high tide under 1 foot of sea level rise, 28 miles at 3 feet of sea level rise, and up to 85 miles at 5 feet of sea level rise. In addition, numerous coastal bridges, rail segments, bike infrastructure, ports and harbors, and RIPTA routes and stops will flood in these three sea level rise scenarios, along with portions of an airport and several intermodal hubs.

A vulnerability assessment focused on assets under state jurisdiction found that infrastructure at greatest risk is located in East Bay communities and on Block Island. In particular, the East Bay communities of Barrington, Bristol, and Warren have very important transportation infrastructure that is vulnerable to sea level rise. The sea level rise scenarios are based on current conditions and do not include projections of erosion, storm surge, or precipitation. This study provides an overview of key exposures and identifies a subset of infrastructure under state jurisdiction that is most vulnerable. The findings direct readers toward areas and individual assets that require more in-depth research, study of alternatives, and engineering analysis. All maps are available at <http://www.planning.ri.gov/geodeminfo/data/slr.php>.

Following the release of the Technical Paper, the SLR scenarios were checked against all transportation projects listed in RIDOT's 10 Year Strategic Plan and all projects submitted through the STIP solicitation process. RIDOT was alerted to any transportation asset that is likely to be affected by 1, 3 and 5 feet of sea level rise. RIDOT will use that information as they work to scope out these transportation infrastructure projects moving forward, balancing public access and safety with costs and overall life cycle of the proposed infrastructure.

## STIP FINANCIAL TABLES

The STIP presents a nine-year program of over \$4 billion in funding for transportation projects from federal fiscal year 2017 to 2025, the first four years of which (FFY 17-20) are fiscally constrained. Funding is programmed within the STIP in the following categories, which have all been defined in the previous sections:

### Operating Budget

- Bridge Maintenance
- Pavement Maintenance
- Traffic Safety Maintenance
- Drainage Maintenance
- Maintenance Operations
- Transit Operations – RIDOT
- Transit Operations – RIPTA
- Toll Operations
- Headquarters Operations

### Capital Program

- Debt Service
- Bridge Capital Program
- Pavement Capital Program
- Traffic Safety Capital Program
- Drainage Capital Program
- Transportation Alternatives Program
- Planning – Program Development
- Maintenance Capital Program
- Toll Capital Program
- Route 6/10 Project
- Transit Capital Program – RIDOT
- Transit Capital Program – RIPTA
- Other Transit Initiatives – RIPTA

The first table provides total investment levels in dollars and percent of total investment for all these program areas by year, for the first four fiscally constrained years of the STIP, FFY 17-20, as well as for all years included in the STIP, FFY17-25.

The detailed STIP tables immediately follow the summary table. The detailed tables included in this STIP expand and improve the format and content of previous STIP tables to provide additional transparency

to the general public. The STIP tables include a project description, funding by year and specific sources of state, federal and other funds anticipated to finance the project. The table also includes a box titled “ADA Plan.” The information provided in this box outlines how the specific project is furthering the implementation of RIDOT’s ADA Transition Plan. The funding sources are all detailed in the STIP resources section of this document. A key to the funding abbreviations used in the table is listed below:

**Gas Tax** – Gasoline tax collected by the State of Rhode Island for transportation purposes

**RICAP (HIP)** – Rhode Island Capital Plan (Highway Improvement Program)

**RIHMA** – Rhode Island Highway Maintenance Account

**RICAP (Facilities)** – Rhode Island Capital Plan (Facilities)

**Indirect GARVEE** – Indirect Grant Anticipation Vehicle bond

**Toll Revenue** – Toll Revenue/Revenue Reimbursed by Tolls

**Railway Program** - Railway Highway Crossings Program

**HSIP** – Highway Safety Improvement Program

**STBG – SA** – Surface Transportation Block Grant – Set Aside for Transportation Alternatives

**NHPP** – National Highway Performance Program

**CMAQ** – Congestion Mitigation Air Quality

**Planning** – Statewide, Metropolitan Planning and Local Technical Assistance Program (LTAP)

**STBG** – Surface Transportation Block Grant

**National Freight** – National Highway Freight Program

**Earmarks** – Federal funding allocated to specific projects through acts of Congress

**NHSTA** – National Highway Traffic Safety Administration

**FTA** – Federal Transit Administration High Intensity Fixed Guideway (5337) and Statewide and Metropolitan Planning (5304 and 5305)

**5307** – Federal Transit Administration Urbanized Area Formula including 5340 density bonus funds

**5339** – Federal Transit Administration Bus and Bus Facilities Formula

**5310** – Federal Transit Administration Enhanced Mobility for Adults and People with Disabilities

**5311** – Federal Transit Administration Non-Urbanized Area Formula including 5340 density bonus funds

This STIP provides an incredible amount of information and should act as an excellent resource for any member of the public in clearly understanding how transportation funds are anticipated to be expended in the State.

**ID 7505 TRANSPORTATION MANAGEMENT CENTER**

**DESCRIPTION**  
 This program provides Intelligent Transportation Systems (ITS) throughout the state, including variable message boards and real-time monitoring of traffic. The TMC's broad-based information gathering and sharing capability enables the TMC to identify highway incidents and congestion with the primary goal of minimizing the environmental and economic impacts of planned and un-planned incidents and events and to improve roadway safety.

ID 7109 SUMMER SERVICE

DESCRIPTION

This line item involves the start-up operations and further development of limited seasonal bus/rail/ferry services connecting major tourist attractions and recreational facilities along Narragansett Bay. It is anticipated that the initial service in FY16 will be limited to weekends during the summer season at select locations, and depending upon usage and demand, could be expanded with additional locations and operations in subsequent years.

## ID 7007 SERVICE TO JOBS AND TRAINING

### DESCRIPTION

This program offsets the costs of providing fixed route service associated with the Jobs Access Reverse Commute program. These routes support urban residents commuting to jobs in lower density areas.

## ID 7013 PLANNING, OUTREACH AND TRAINING

### DESCRIPTION

This program supports RIPTA's long- and short- term transit planning efforts, including data collection and analysis, transit service evaluation, and execution of plans and studies.

### MUNICIPALITIES

# INTRODUCTION

## SUMMARY

The State of Rhode Island's Transportation Equity Benefit Analysis, or TEBA, is a document developed by the Rhode Island Statewide Planning Program (RISPP), in collaboration with the Rhode Island Department of Transportation (RIDOT). The TEBA utilizes a people and place-based approach. The TEBA identifies and geographically locates select population subgroups (SPG) in the State of Rhode Island that are protected from discrimination under the law, and groups that may face transportation challenges. In compliance with Federal requirements, the TEBA also determines how the state's transportation investments outlined in FFY 2017 - 2020 of the FFY 17-25 State Transportation Improvement Program (STIP) impact these select population groups. The select population groups within the TEBA are either directly protected under Title VI of the Civil Rights Act of 1964, or can be linked to protected populations within Title VI. The select population groups within the TEBA that do not fall under Title VI were assessed and paired with the corresponding federal statutes, authorities, and executive orders.

## OBJECTIVE

The objective of the TEBA is to bridge select population group data with project locations and investments outlined in the first four fiscally constrained years (FFY 2017 - 2020) of the FFY 2017 - 2025 STIP to assess the distribution of transportation investments. The first step in the analysis was the development of a population identification component. The second step of the analysis involved pairing population data with STIP project location data.

## Population Identification

In an effort to provide the most thorough TEBA, the population identification component was conducted in two parts:

- Data collection and research on equity and its pertinence to federal statutory requirements and Executive Orders, focused on the following select population groups:
  1. Minority; and
  2. Low-income populations.
- Data collection and research of other select population groups protected from discrimination

under federal laws that influence transportation decision-making:

3. School-age Children (ages 5-19)
4. Aging individuals ( $\geq 65$ )
5. Individuals with a disability
6. Individuals with limited English proficiency (LEP), which included the top five LEP language groups in Rhode Island, as follows:
  - 6.1 Spanish or Spanish Creole
  - 6.2 Portuguese or Portuguese Creol
  - 6.3 Chinese
  - 6.4 French Creole
  - 6.5 Mon-Khmer, Cambodian

## FEDERAL COMPLIANCE AND GUIDANCE

The goal of the TEBA is to assess the distribution of transportation investments across select population groups for federal fiscal years 2017-2020 of the STIP. As an MPO, the Rhode Island State Planning Council is subject to federal requirements that impact the development and implementation of plans, including the STIP and Long Range Transportation Plan.

The TEBA addresses federal transportation planning requirements via the population identification component:

- Data collection and research on select population groups protected within Executive Order 12898, [Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations](#) are specifically addressed within the TEBA.
  - The minority population is also protected under Title VI, which prohibits discrimination based on race, color, and national origin.
- Data collection and research on other protected populations and categories within the following Federal Statutes, Authorities and Executive Orders:
  - [Title VI of the Civil Rights Act of 1964](#)
  - [Age Discrimination Act of 1975](#)
  - [Americans with Disabilities Act of 1990 \(ADA\)](#)
  - [Section 504 of the Rehabilitation Act of 1973](#)
  - [Executive Order 13166, Improving Access to Service Persons with Limited English Proficiency](#)
  - Individuals with limited English proficiency are directly protected under Executive Order 13166,

and under Title VI through nondiscrimination of national origin.

The TEBA addresses federal transportation planning requirements by assessing the distribution of transportation investments across select population groups. While some population groups are protected under more specific federal statutes, authorities, and executive orders, Title VI serves as a core Act, protecting several populations directly or indirectly from discrimination.

## AN OVERVIEW OF FEDERAL NONDISCRIMINATION EXECUTIVE ORDERS, STATUTES AND AUTHORITIES

The following is an overview of the **environmental justice (EJ)** and Title VI federal nondiscrimination executive orders, statutes and authorities which the TEBA followed. The overview also includes information on protected populations addressed within the TEBA, and information on MPO responsibilities.

### ENVIRONMENTAL JUSTICE

Executive Order 12898, **Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations** was signed in 1994.

**Overview:** “Executive Order 12898 mandates that each Federal agency develop an agency-wide EJ strategy that identifies and addresses disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority and low-income populations. A Federal agency’s EJ strategy must list programs, policies, planning, and participation processes that, at a minimum:

- Promote enforcement of all health and environmental authorities in areas with minority and low-income populations.
- Ensure greater public participation.
- Improve research and data collection relating to the health and environment of minority and low-income populations.
- Identify differential patterns of consumption of natural resources among minority and low-income populations.”<sup>1</sup>

**Populations protected and addressed:** Minority, Low-Income

**Responsibility:** MPOs are charged with evaluating their plans and programs for EJ sensitivity and expanding outreach efforts to low-income, minority, and other potentially disadvantaged populations, as part of the U.S. Department of Transportation’s certification requirements.

---

<sup>1</sup> Federal Highway Administration (FHWA). “Environmental Justice Reference Guide: What is Environmental Justice?”. Reference Guide 2015. Web. 05 Oct. 2015. [http://www.fhwa.dot.gov/environment/environmental\\_justice/resources/reference\\_guide\\_2015/section04.cfm](http://www.fhwa.dot.gov/environment/environmental_justice/resources/reference_guide_2015/section04.cfm).

## WHAT IS ENVIRONMENTAL JUSTICE?

“Environmental Justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.”

- EPA<sup>1</sup>

1 U.S. Environmental Protection Agency (EPA). “What is Environmental Justice?” Environmental Justice. 2015. 05 Oct. 2015. <http://www.epa.gov/environmentaljustice/>.

## TITLE VI

**Title VI** was enacted as part of the landmark Civil Rights Act of 1964.

**Overview:** Title VI prohibits discrimination on the basis of race, color, and national origin in programs receiving federal financial assistance.

**Populations protected and addressed:** Race, color, national origin, including minority (also protected within E.O. 12898).

**Responsibility:** As a recipient of U.S. Department of Transportation Funds, the MPO is responsible for complying with U.S. DOT regulations related to Title VI.<sup>2</sup>

## OTHER FEDERAL NONDISCRIMINATION STATUTES AND AUTHORITIES

In addition to Title VI, there are other federal nondiscrimination statutes that afford legal protection to specific populations which were considered in the population identification component. Those populations include the following:

### Non-discrimination of Age

**Age Discrimination Act of 1975:** “Pursuant to regulations prescribed under Section 6103 of this title, no person in the United States shall, on the basis of age, be excluded from participation, in be denied the benefits of,

2 Federal Highway Administration (FHWA). “Environmental Justice Reference Guide: What is Environmental Justice?”. Reference Guide 2015. Web. 05 Oct. 2015. [https://www.fhwa.dot.gov/environment/environmental\\_justice/resources/reference\\_guide\\_2015/section00.cfm](https://www.fhwa.dot.gov/environment/environmental_justice/resources/reference_guide_2015/section00.cfm).

or be subjected to discrimination under, any program or activity receiving Federal financial assistance.”<sup>3</sup>

**Populations protected and addressed:** Individuals of any and all ages.

### Non-discrimination of Individuals with Disabilities

The **Americans with Disabilities Act of 1990 (ADA)**,<sup>4</sup> as amended (42 U.S.C. § 12101 et seq.), and **Section 504 of the Rehabilitation Act of 1973**<sup>5</sup> prohibit discrimination on the basis of disability. The ADA provides comprehensive civil rights protections to any qualified person with a disability and it forbids discrimination not only in government programs, benefits and services, but also in employment practices, access to public accommodations, and telecommunications.

**Populations protected and addressed:** Individuals with disabilities

### Non-discrimination of National Origin and Individuals with Limited English Proficiency (LEP)

**Executive Order 13166, Improving Access to Service Persons with Limited English Proficiency** was signed into law in 2000 and clarifies Title VI of the Civil Rights Act of 1964 with regards to national origin discrimination against persons with limited English proficiency. “Executive Order 13166 requires federal agencies to examine the services they provide, identify any need for services for those with limited English proficiency, and develop and implement a system to provide those services so LEP persons can have meaningful access to them. Compliance standards for recipients of federal funds were developed by the U.S. Department of Justice and are articulated in the policy document “Enforcement of the Civil Rights Act of 1964-National Origin Discrimination against Persons with Limited English Proficiency (2002).”<sup>6</sup>

6 U.S. Department of Justice. “Executive Order 13166: Improving Access to Services for Persons with Limited English Proficiency”. 07 Aug 2015. Web. 5 Oct. 2015. <http://www.justice.gov/crt/executive-order-13166>.

**Populations protected and addressed:** Individuals of any national origin, as well as individuals with limited English proficiency.

**Responsibility:** As a recipient of U.S. Department of Transportation funds, the MPO is responsible for complying with regulations related to non-discrimination according to age, individuals with disabilities, national origin, and individuals with limited English proficiency.

## DEMOGRAPHIC AND SOCIOECONOMIC PROFILE DATA

### METHODOLOGY

After evaluating the Federal requirements and populations specifically protected under the law, RISPP finalized a list of select population groups (SPG) for the TEBA.

Within part one of the population identification component of the TEBA, data was collected to examine the following select population groups in compliance with Environmental Justice Executive Order 12898 and Title VI (minority individuals):

1. Minority individuals
2. Individuals in poverty/low-income groups

The second part of the population identification component, as guided by other federal regulations, identified the following demographic or socioeconomic select population groups which may face transportation challenges:

3. School-age Children (ages 5-19)
4. Aging individuals ( $\geq 65$ )
5. Individuals with a disability
6. Individuals with limited English proficiency (LEP), including the top five LEP language groups in Rhode Island, as follows:
  - 6.1 Spanish or Spanish Creole
  - 6.2 Portuguese or Portuguese Creole
  - 6.3 Chinese
  - 6.4 French Creole
  - 6.5 Mon-Khmer, Cambodian

### Thresholds

The RISPP developed thresholds in an effort to create a metric or screening tool to identify populations with a “significant presence.” The “greater than or equal to the state average” threshold is intended to identify greater percentages of select population groups in the state. The threshold was utilized with the goal of identifying concentrated groups based on state averages without the intent of overlooking any “readily identifiable” populations. The numeric thresholds used to quantify a significant presence of the select population group vary per indicator. Select populations that are above the state average qualify as a significant presence. The “greater than or equal to the state average” threshold is

used for all but one select population group: individuals with limited English proficiency. For the limited English proficiency select population group, the Safe Harbor thresholds were used to ensure increased inclusivity. The MPO is in compliance with Title VI obligations by incorporating Safe Harbor thresholds in the analysis.<sup>7</sup> Safe Harbor thresholds are typically applied to written documents, however the goal of the threshold remains within this analysis: to identify those populations with limited English proficiency using a threshold that is both inclusive and identifies multiple language groups within a given geography.

## DATA SOURCES

The U.S. Census Bureau provides two key data sets that will be used in this analysis.

### Decennial Census

The 2010 decennial Census, which is a 100 percent count of all persons in the United States, was utilized to identify the following population demographics, including:

- Minority individuals
- School-age Children (ages 5-19)
- Aging Individuals (Age ≥ 65)
  - Data Source = 2010 Census Table DP-1

### American Community Survey (ACS)

The second U.S. Census Bureau data product utilized in this analysis was the American Community Survey (ACS). The ACS is an ongoing annual sample-based survey of the United States population. The RISPP utilized the most recent 5-year estimates completed in 2014. The ACS data provides basic demographic information similar to the decennial Census, but also provides far greater detail on various demographic and socioeconomic characteristics, including the following relevant data that will be utilized in this analysis:

- Individuals in poverty
  - Data Source = 2014 ACS Table S1701
- Individuals with a disability
  - Data Source = 2014 ACS Table S1810
- Individuals with limited English proficiency

<sup>7</sup> U.S. Department of Health and Human Services. "Fact Sheet on Guidance to Federal Financial Assistance Recipients Regarding Title VI Prohibition against National Origin Discrimination Affecting Limited English Proficient (LEP) Persons." Web. 5 Oct. 2015. <http://www.hhs.gov/civil-rights/for-individuals/special-topics/limited-english-proficiency/fact-sheet-guidance/index.html>.

- Data Source = 2014 ACS Table B16001

The ACS is based on sample data, or a "snapshot," collected by the U.S. Census Bureau (as opposed to 100 percent counts of the population in the decennial Census). As a result, there is a noted margin of error (where available) indicated in each of the statewide averages where ACS data is utilized.

## Population Totals

Due to the use of multiple data sources, and multiple American Community Surveys, the total population value varies per select population group. For example, the individuals in poverty/low-income SPG utilizes 2014 ACS data from a survey with a total population count of 1,012,806. The individuals with limited English proficiency SPG also utilizes 2014 ACS data, however the total population count within that survey is equal to 997,740, which is limited to persons 5 years old and older.

## MAPPING

Data for each of the six select population groups were mapped using GIS to visually identify the locations of concentrated select population groups. Using the GIS maps created, further analysis was later conducted on transportation investments and potentially impacted groups to ensure nondiscrimination and the equitable distribution of transportation investments. The six select population groups were mapped at the U.S. Census tract level for all Rhode Island tracts.

Demographic and socioeconomic factors were mapped using a thematic (quantitative progression) method to capture populations that may not meet or exceed the statewide average for that indicator; populations that may bypass inclusion in the "greater than or equal to" threshold were acknowledged for their select population group presence.

The following is a list of the eleven maps created for the TEBA, per select population group:

1. Figure A-16: Percentage of Minority Individuals in RI by U.S. Census Tract
2. Figure A-17: Percentage of Individuals in Poverty or with a Low-Income in RI by U.S. Census Tract
3. Figure A-18: Percentage of School-Age Children in RI by U.S. Census Tract

4. Figure A-19: Percentage of Aging Individuals in RI by U.S. Census Tract
5. Figure A-20: Percentage of Individuals with Disabilities in RI by U.S. Census Tract

Maps using the state average threshold were produced for limited English proficiency and the top five limited English proficiency language groups. Thematic maps for the limited English proficiency category would have yielded very few tract results, as some of the top five language groups only have one or two Census tracts represented as a significant presence using the Safe Harbor threshold.

6. Figure A-21: Percentage of Limited English Proficiency (LEP) Individuals in RI by U.S. Census Tract
  - 6.1 Figure A-22: Percentage of LEP Individuals in RI by U.S. Census Tract - Spanish or Spanish Creole
  - 6.2 Figure A-23: Percentage of LEP Individuals in RI by U.S. Census Tract - Portuguese or Portuguese Creole
  - 6.3 Figure A-24: Percentage of LEP Individuals in RI by U.S. Census Tract - Chinese
  - 6.4 Figure A-25: Percentage of LEP Individuals in RI by U.S. Census Tract - French Creole
  - 6.5 Figure A-26: Percentage of LEP Individuals in RI by U.S. Census Tract - Mon Khmer, Cambodian

## POPULATION DEFINITIONS

The following are the definitions of the select population groups included within the TEBA:

### I. MINORITY (ENVIRONMENTAL JUSTICE AND TITLE VI)

According to the FTA: “A minority population means any readily identifiable group or groups of persons who live in a geographic proximity, and if circumstances warrant, geographically dispersed or transient persons such as migrant workers or Native Americans who will be similarly affected by a proposed [transportation] program, policy or activity.”<sup>8</sup>

Minority individuals include persons who identify as any one of the following groups defined by the U.S. Census Bureau in accordance with guidelines provided by the U.S. Office of Management and Budget (OMB):

- Black or African-American alone
- Hispanic or Latino of any race
- Asian American alone
- American Indian or Alaska Native alone
- Native Hawaiian or Pacific Islander alone

Accordingly the “non-minority” population consists of all other persons not included in any of the above named groups, namely those identifying as non-Hispanic white alone. For this analysis, the category of “white alone” has been subtracted from the state’s total 2010 U.S. Census population to determine the state’s total minority population.

The minority category is protected under the Environmental Justice Executive Order 12898, and is also pertinent to Title VI.

**STATE AVERAGE** 23.6% of the RI population (1,052,567) identifies as minority

**Source:** 2010 U.S. Census, Table DP-1

**Margin of error:** There is no margin of error within the 2010 U.S. Census demographic profile data.

<sup>8</sup> U.S. Department of Transportation, Federal Transit Administration. “Environmental Justice Policy Guidance for Federal Transit Administration Recipients.” 15 Aug 2012. Page 6. [http://www.fta.dot.gov/documents/FTA\\_EJ\\_Circular\\_7.14-12\\_FINAL.pdf](http://www.fta.dot.gov/documents/FTA_EJ_Circular_7.14-12_FINAL.pdf).

## 2. INDIVIDUALS IN POVERTY/LOW-INCOME (ENVIRONMENTAL JUSTICE)

For the TEBA analysis, RISPP utilized ACS poverty thresholds (below 200% of poverty).

Prior to selecting the ACS survey for the individuals in poverty/low-income population SPG, RISPP considered other data and thresholds as well.

One source considered included FHWA's definition, which defines low-income persons as "those whose household income is at or below the [U.S.] Department of Health and Human Services (HHS) poverty guidelines."<sup>9</sup> This differs from the Council of Environmental Quality's (CEQ) guidance on environmental justice, which suggests the use of U.S. Census Bureau poverty thresholds.

The RISPP also considered the 2015 U.S. Department of Health and Human Services guidance (HHS)<sup>10</sup> poverty guideline for persons in family/household of three (3) is \$20,090, as three is the RI state average family size according to the 2010 Census ACS.<sup>11</sup>

The ACS poverty thresholds were ultimately selected as the ACS featured data on the number of individuals within the population as opposed to the number of families or households in the state. The RISPP concluded that data pertaining to individuals rather than number of families or households would be more inclusive. Additionally, the ACS threshold was selected to account for the state's high cost of living relative to nationally defined poverty thresholds, and to capture the greatest number of individuals living within the margins of poverty.

According to the ACS's 2014 figures for poverty status in the past 12 months, "Below 200% of poverty" includes all those described as "in poverty" under the official definition, plus some people who have income above poverty but less than 2 times their poverty threshold."<sup>12</sup>

The U.S. Census Bureau established poverty status for individuals based on a combination of an individual's household composition, size, and income. The individuals in poverty/low-income category is protected in the Environmental Justice Executive Order 12898.

**STATE AVERAGE** 30.6% of the RI population (310,086 of 1,012,806) lives at or below 200 percent of the national poverty level (poverty status in the last 12 months for individuals)

**Source:** ACS 2014, Table S1701

**Margin of error:** +/- 6,039

## 3. SCHOOL-AGE CHILDREN

The school-age children select population group was included within the TEBA analysis to reflect the transportation challenges associated with a young demographic, who are typically dependent on adults for transportation, including trips to school. Children commute to school in many ways. Travel modes outlined within the "How Children Get to School" travel pattern report by the National Center for Safe Routes to School include: family vehicle, walking, biking, school bus, transit, or other.<sup>13</sup>

For the TEBA Analysis, the age range designated to school-age children is 5-19 years of age. There is comprehensive Census data to support the aforementioned age bracket, which was selected to be inclusive of students in both primary and secondary school.

**STATE AVERAGE** 19.4% of the RI population (204,310 of 1,052,567) is aged 5-19

**Source:** 2010 U.S. Census, Table DP-1

**Margin of error:** There is no margin of error within the 2010 U.S. Census demographic profile data.

## 4. AGING POPULATION (≥65)

Aging individuals, as well as individuals of all ages are protected from age discrimination within the Age Discrimination Act of 1975. Transportation mobility barriers and aging individuals are often linked. While each aging individual may not experience mobility

<sup>13</sup> National Center for Safe Routes to School. "How Children Get to School: School Travel Patterns From 1969-2009." November 2011. 07 Dec. 2015. [http://saferoutesinfo.org/sites/default/files/resources/NHTS\\_school\\_travel\\_report\\_2011\\_0.pdf](http://saferoutesinfo.org/sites/default/files/resources/NHTS_school_travel_report_2011_0.pdf).

challenges, the likelihood of a mobility challenge increases with an individual's age. The aging population group (aged 65 and older) was selected for analysis because this population qualifies for select mobility programs with an age requirement in the state. For example, the Rhode Island Public Transit Authority (RIPTA) offers individuals aged 65 and older the opportunity to ride a RIPTA bus at a discounted rate with a RIPTA "Reduced Fare Bus ID pass" at off-peak commuting times.

Aging individuals, in addition to individuals of all ages, are protected from age discrimination within the Age Discrimination Act of 1975.

**STATE AVERAGE** 14.4% of the RI population is ≥ age 65 (151,881 of 1,052,567)

**Source:** 2010 U.S. Census, Table DP-1  
**Margin of error:** There is no margin of error within the 2010 U.S. Census demographic profile data.

## 5. INDIVIDUALS WITH A DISABILITY

The "individuals with a disability" select population group was selected for inclusion within the TEBA as this group may experience limited travel mobility due to a disability. Additionally, this group may exhibit different travel patterns and needs than other population groups.

The RISPP identified individuals with a disability according to the ACS identification of serious difficulty with four basic areas of functioning – hearing, vision, cognition, and ambulation. The functional limitations namely include bathing and dressing, and difficulty performing errands such as shopping, or visiting a doctor's office alone.

**STATE AVERAGE** 12.4% of the civilian noninstitutionalized population (133,024 of 1,037,156) has a disability

**Source:** ACS 2014, Table S1810  
**Margin of error:** +/- 2,399

## 6. INDIVIDUALS WITH LIMITED ENGLISH PROFICIENCY (LEP)

The RISPP has recognized that the inability to speak English "very well" can be a barrier to accessing goods and services, including transportation. Additionally,

identifying the limited English proficiency populations and their locations serves as a critical component to RISPP outreach efforts, particularly in assessing the need to develop RISPP publications and written materials in additional languages.

The 2014 5-Year ACS features a table entitled, "Language spoken at home by ability to speak English for the population 5 years and over." The LEP Federal Interagency website ([Lep.gov](http://lep.gov)) defines LEP individuals as those individuals that self-identified as speaking English "less than very well" in the aforementioned ACS table.<sup>14</sup>

Individuals with LEP are protected from discrimination under Executive Order 13166, Improving Access to Service Persons with Limited English Proficiency. The following is the limited English proficiency SPG data for the state, as well as the LEP state average in Rhode Island:

**STATE AVERAGE** 8.5% of RI population ≥ age 5 speaks english "less than very well" (84,851 of 997,740)

**Source:** ACS 2014, Table B16001  
**Margin of error:** There are 39 language groups included within the 2014 ACS Table B16001. Each language group features a margin of error for the "speak english less than 'very well'" value. The RISPP added each of the 39 "speak english less than 'very well'" values from each language group to formulate a total LEP population within the state. Due to the combination of data values, there is not a margin of error available for the combined LEP language groups.

The RISPP also included the top 5-LEP language groups in the State of Rhode Island within the analysis.

- 6.1 Spanish or Spanish Creole
- 6.2 Portuguese or Portuguese Creole
- 6.3 Chinese
- 6.4 French Creole
- 6.5 Mon-Khmer, Cambodian

The RISPP team used the 2014 5-year ACS Survey data to calculate the top five LEP language groups in Rhode

<sup>14</sup> Limited English Proficiency Interagency Website. "Source and Methodology". 27 Jan. 2016. <http://www.lep.gov/maps/methodology.htm>.

Figure A-1: Select Population Group Figures

	Group Code	Select Population Groups (SPG)	Total RI Population within the data source	Total SPG Population in RI	Percentage of RI Population
	1	Minority Individuals	1,052,567	248,882	23.6%
	2	Individuals in Poverty/Low-Income (200% of Poverty Level)	1,012,806	310,086	30.6%
	3	School-Age Children (Ages 5-19)	1,052,567	204,310	19.4%

## Key Findings: Population Identification

As depicted in Figure A-1, Select Population Group Figures, and Figure A-2, Presence of Select Population Groups in Rhode Island, the population identification component of the TEBA suggests Rhode Island's highest state averages among the select population groups (SPG) include the low-income population group (30.6% of RI's population) and the minority population group (23.6% of RI's population).

The select population group with the greatest Census tract representation in the state is the individuals with a disability SPG. While only 12.8% of the population as a whole, there is a significant presence (above the state average) of individuals with a disability in 121 of RI's 241 Census tracts, or 50.2% of RI's Census tracts. There are several other SPG tracts representing significant SPG presence among the following populations: aging individuals (48.1% of RI tracts), individuals in poverty/low income (39.4% of RI tracts), school-age children (38.2% of RI tracts) and minority individuals (32.8% of RI tracts).

## Conclusion: Population Identification

As echoed throughout the analysis, the overarching goal of the TEBA is to assess the distribution of the state's transportation projects and investments across select population groups throughout Rhode Island. The groups included within the population identification component of the TEBA are protected from discrimination under the law and form the basis of this analysis.

## STIP PROJECT DISTRIBUTION

### ANALYSIS OVERVIEW

To assess the distribution of projects within FFY 2017-2020 of the FFY 2017-2025 STIP, the state developed the Transportation Equity Benefit Analysis, or TEBA. The TEBA complies with Title VI and environmental justice requirements.<sup>15</sup> For the TEBA, RISPP paired select population group data in Rhode Island with STIP project and investment locations to assess the distribution of the transportation investments.

### METHODOLOGY

#### Select Population Groups (SPG)

Utilizing the finalized a list of select population groups (SPG) identified in the population identification component, RISPP pinpointed the Census tracts with populations at or above the state average for each SPG or category, with the exception of individuals with limited English proficiency, which utilized the Safe Harbor threshold:

1. Minority individuals
2. Individuals in poverty/low-income groups
3. School-age Children (ages 5-19)
4. Aging individuals ( $\geq 65$ )
5. Individuals with a disability
6. Individuals with limited English proficiency (LEP), including the top five LEP language groups in Rhode Island, as follows:
  - 6.1 Spanish or Spanish Creole
  - 6.2 Portuguese or Portuguese Creole
  - 6.3 Chinese
  - 6.4 French Creole
  - 6.5 Mon-Khmer, Cambodian

#### Selected Projects and Funding Programs

Next, the TEBA utilized project costs within seven of the STIP's funding programs and paired it with select population group data. All projects with site specific physical locations, and funded at any point between FFY 2017-2020 were included within the analysis. Project data within the following seven funding programs were highlighted within the analysis:

<sup>15</sup> U.S. Department of Transportation, Federal Highway Administration. "Environmental Justice: An Overview of Transportation and Environmental Justice". Web. 13 Jan. 2016. [http://www.fhwa.dot.gov/environmental/environmental\\_justice/overview/](http://www.fhwa.dot.gov/environmental/environmental_justice/overview/)

- 6/10 Project
- Bridge Capital Improvement Program
- Drainage Capital Program
- Pavement Capital
- Traffic Safety Capital Program
- Transit Capital Program - RIDOT
- Transportation Alternatives

Administrative and operational costs and statewide line items not associated with a physical location were not identified in this geographically-driven analysis.

### Select Population Group Tracts

For the TEBA analysis, RISPP identified select population group, or SPG tracts. The SPG tracts were used to pair the geographic locations of SPG populations in the state with the number and value of STIP projects in Rhode Island.

### Dividing Investments Based on Location

Most projects had an investment value associated with a single location, located in a single Census tract. However, there were a limited number of instances in which an individual project occurred in multiple Census tracts: These instances prompted RISPP to develop a method to use in splitting the investments associated with each project.

In instances where a project overlapped neighboring tracts relatively equally (ex. Half of a road in one tract, the other half in another tract), the investment associated with that project was split equally between both Census tracts. In instances where a mapped project overlapped a neighboring Census tract by more than half, funding was allocated in full to the tract which held the majority of the project in an effort to avoid overlap in the allocation of investments. In instances where a mapped project occurred in several different locations, project funds were divided by the number of mapped locations and split. For example, if a project had an investment of \$100,000 and featured points in a Johnston tract and a Pawtucket tract, \$50,000 was allocated to each tract.

### Utilizing Data with Caution

While each of the above situations did occur periodically in the mapping and data analyzation process within the TEBA, it should be noted that these examples represent a minimal number, approximately 30, amongst the hundreds of projects analyzed. However, RISPP utilized

these methods carefully to ensure that projects and investments were not counted multiple times. The RISPP concluded that these methods were the least invasive in keeping the integrity of the data.

### Combining SPG and STIP Projects and Investments

Using the select population group (SPG) and the STIP project data (number of projects and investment per project) within each of the seven programs, RISPP created the following data tables:

- Figure A-5: Distribution of Projects and Project Investments in Tracts with a Significant Presence of Minority Individuals
- Figure A-6: Distribution of Projects and Project Investments in Tracts with a Significant Presence of Individuals in Poverty or with a Low-Income (200% of Poverty)
- Figure A-7: Distribution of Projects and Project Investments in Tracts with a Significant Presence of School-Age Children (5-19)

## FINDINGS

The overarching goal of the Transportation Equity Benefit Analysis is to assess the distribution of transportation investments across select population groups for federal fiscal years 2017-2020 of the STIP. The RISPP has compiled overall findings for the school-age children, aging individuals, individuals with a disability and individuals with limited English proficiency select population groups within the analysis. In addition, RISPP completed a targeted analysis focused on minority individuals and individuals in poverty/low-income.

Of the 241 Census tracts considered in the TEBA analysis, there are 9 without SPG tract designation, which suggests that 232 or 96% of RI’s Census tracts are designated as select population group tracts from one or more select population groups (Figure A-4: SPG Tracts and Non-SPG Tracts).

### Key Findings: Select Population Groups

Based on the data within Figure A-11: Summary Table of SPG Tracts and Allocated Investments, it appears that the percentage of STIP project funding allocated to select

		cost of projects	% of total cost
Bridge Capital	\$297.39	\$105.61	35.5%
Pavement Capital	\$197.64	\$107.64	54.5%
Traffic Safety Capital	\$46.46	\$11.05	23.8%
Drainage Capital	\$2.45	\$0.00	0.0%
Transportation Alternatives	\$28.68	\$15.78	55.0%
6/10 Project	\$59.02	\$59.02	100.0%
Transit Capital Program - RIDOT	\$21.10	\$21.10	100.0%
<b>Total</b>	<b>\$652.74</b>	<b>\$320.20</b>	<b>49.1%</b>

\* For the Transportation Investment portion of the analysis, projects included in the STIP federal fiscal years 2017-2020 was used. The “total cost of all projects” excludes projects that are not site specific.

population group tracts exceeds the percentage of tracts identified as SPG tracts in the State of Rhode Island for all select population groups.

Of all RI tracts, 38.2% are school-age SPG tracts, and 64.9% of all STIP project funds between FFY 2017-2020 have been allocated to school-age tracts meeting the SPG threshold. The trend of elevated percentages of funds allocated to SPG tracts repeats for the aging, individuals with disabilities and individuals with limited English proficiency SPG tracts. Of all RI tracts, 46.1% are aging SPG tracts with 62.4% of STIP project fund allocation. The individuals with disabilities SPG tracts of represent 50.2% of RI tracts, with 57.1% STIP of project funds reaching those SPG tracts. Finally, the individuals with limited English proficiency SPG tracts comprise 28.6% of all RI tracts, and includes 35.6% of STIP project fund allocation.

### Key Findings: Environmental Justice (EJ)

The RISPP utilized Figure A-11: Summary Table of SPG Tracts and Allocated Investments, to assess minority tracts and individuals in poverty/low-income tracts. The assessment highlighted the following findings: Of all RI tracts, 32.8% are minority SPG tracts, and 39.4% of all STIP project funds between FFY 2017-2020 have been allocated to minority tracts meeting the SPG threshold. The SPG tracts for individuals in poverty/low income represent 39.4% of tracts in the state, and have 44.6% of project funds allocated to them from all STIP project funds.

Figure A-14: Carless Household SPG Tracts

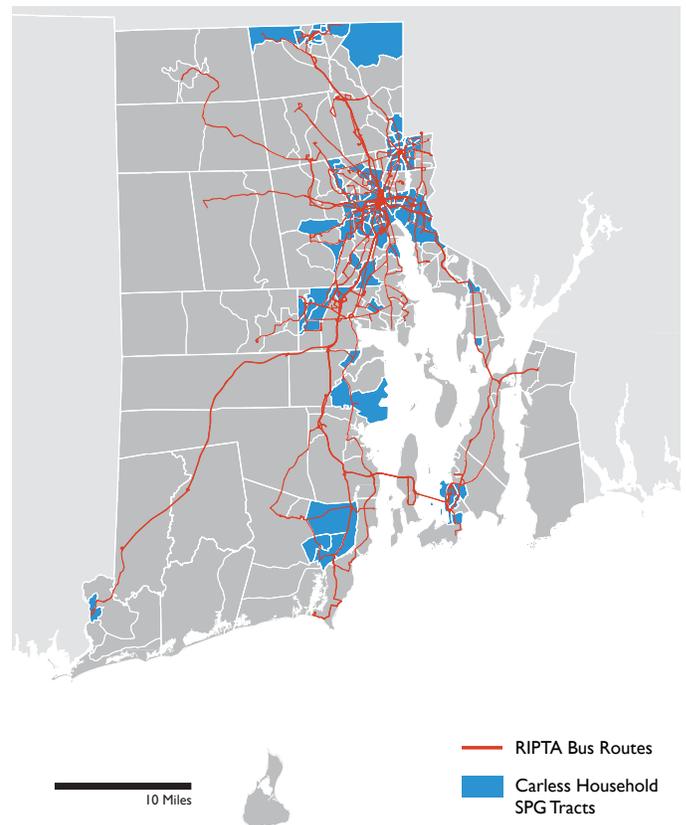

Figure A-15: Transit Access Summary

STIP Funding Program	Total SPG Tracts	Number of SPG Tracts Intersecting RIPTA Routes	Percentage SPG Tracts Intersecting RIPTA Routes
1. Minority Individuals	79	78	99%
2. Individuals in Poverty/Low-Income	95	94	99%
Environmental Justice Tracts	105	104	99%
3. School-Aged Children (Ages 5-19)	92	84	91%
4. Aging Individuals (≥ 65)	116	101	87%
5. Individuals with a Disability	121	117	97%
6. Individuals with LEP	69	67	97%
7. Carless Households	99	97	98%

After evaluating the groups as two individual select population groups, the RISPP combined minority and individuals in poverty/low-income SPG tracts to assess tracts with significant representation from one, or both EJ populations. For this portion of the analysis, these tracts with significant representation of one or both EJ population groups will be referred to as Environmental Justice, or EJ SPG tracts. Figure A-12: Environmental Justice SPG Tracts, illustrates all EJ SPG tracts in Rhode Island. In instances where there was representation from both select population groups that met their respective SPG tract thresholds, tracts were counted once to eliminate overlap. RISPP analyzed the funding associated with the EJ SPG tracts throughout the state according to the specific STIP investments. The results of this analysis can be found in Figure A-13: Environmental Justice SPG Tract Funding Summary.

There are a total of 105 EJ SPG tracts in RI, or 43.5% (105/241 tracts). The total percentage of all STIP project funds allocated to EJ SPG Tracts (49.1%) exceeds the percentage of designated EJ SPG tracts throughout RI (43.5%). Furthermore, almost half of the percentage of all STIP site specific project funds allocated to SPG Tracts reach environmental justice select population group tracts.

### Transit Access Analysis

In addition to evaluating the select population groups, RISPP had an interest in evaluating carless households. Carless households, in particular, may be dependent on public transportation for their transportation needs. Therefore, in an effort to evaluate transit access for Rhode Island’s carless households, RISPP conducted a transit access analysis. Additionally, RISPP included each of the

select population groups in the transit access analysis, as individuals within the select population groups may also rely upon transit services. The RISPP generated Figure A-15: Transit Access Summary by mapping the RIPTA bus routes with each set of SPG tracts to evaluate transit access across all select population groups in Rhode Island.

### Special Population Groups

The identification of all special population groups within the exception of carless households was outlined previously within this analysis. The RISPP used 2014 ACS 5-Year data to determine the total number of households in RI (409,569) and the total number of carless households (40,203) to calculate the state percentage of carless households (9.8%). Of RI’s 241 tracts, 99 or 41% of tracts have a significant presence of carless households, as shown in Figure A-14: Carless Household SPG Tracts, are designated as carless households SPG tracts.

### Key Findings: Transit Access Analysis

One of the key findings within the transit access analysis includes the percentage of carless household SPG tracts intersecting RIPTA bus routes. Of the 99 carless household SPG tracts in the state, 97, or 98% of tracts intersect with RIPTA routes.

In addition, for each of the select population groups, the number of SPG tracts intersecting RIPTA routes yield high percentages in relation to the total number of SPG tracts per group. Percentages of SPG tracts intersecting RIPTA routes range from the high eighties to the high nineties for each group. Eighty-seven percent of aging SPG tracts intersect with RIPTA bus routes, while 99% of minority, poverty/low-income, and a combination of

both population tracts (EJ tracts) intersect with RIPTA bus routes.

## CONCLUSION

Of all tracts in Rhode Island, 96% are SPG tracts, some of which meet the threshold designation with the presence of more than one select population group. The RISPP has compared the geographic presence of select population groups throughout the state with STIP project investments between FFY2017-2020. Each of the select population groups have a percentages of funding which exceed their SPG throughout the State of Rhode Island.

In an effort to highlight data from select population group tracts that are more geographically concentrated, RISPP analyzed environmental justice or EJ SPG tracts as well: A major finding concludes that almost half of the STIP project funds (49.1%) reach minority and low-income/poverty SPG tracts, or tracts representing both populations in RI.

Finally, RISPP recognized the importance of evaluating access to public transportation, added the carless household SPG, and conducted a transit access analysis to determine the percentage of SPG tracts intersecting RIPTA bus routes. The key finding within that analysis is that the majority of all SPG tracts intersect RIPTA bus routes. For the carless households select population group, 98% of all carless household SPG tracts intersect with RIPTA bus routes. Public transit services serve a critical role in providing access to the community as a whole, and especially to those select population groups, such as carless households, which may be reliant on transit services. In addition, investments made in roadways, bridges and other transportation infrastructure enhance the transportation system as a whole, benefiting all residents and visitors alike in their travel throughout the state.
