RHODE ISLAND POPULATION PROJECTIONS: STATE, COUNTY, AND MUNICIPAL 2000-2030

STATEWIDE PLANNING PROGRAM
Rhode Island Department of Administration
One Capitol Hill
Providence, Rhode Island 02908-5870
www.planning.ri.gov

The Statewide Planning Program, Rhode Island Department of Administration, is established by Chapter 42-11 of the *General Laws* as the central planning agency for state government. The work of the Program is guided by the State Planning Council, comprised of state, local, and public representatives and federal and other advisors.

The objectives of the Program are: (1) to prepare strategic and systems plans for the state; (2) to coordinate activities of the public and private sectors within this framework of policies and programs; (3) to assist local governments in management, finance, and planning; and (4) to advise the Governor and others concerned on physical, social, and economic topics.

This Technical Paper is one of a series prepared by the Statewide Planning Program. They all present information developed through planning activities to state and federal agencies, local governments and the public.

Activities of the Program are supported by state appropriations and federal grants. The contents of this report reflect the views of the Statewide Planning Program which is responsible for the accuracy of the facts and data presented herein. The contents do not necessarily reflect the official views or policies of other sponsoring agencies. This publication is based upon publicly supported research and may not be copyrighted. It may be reprinted, in part or full, with the customary crediting of the source.

Contact the Statewide Planning Program, One Capitol Hill, Providence, RI (401) 222-7901. Copies of this report are also available on the web at www.planning.ri.gov. Copies may also be made available as an electronic file.

ABSTRACT

TITLE: Rhode Island Population Projections By Age, Sex, & Race 2000-2030

SUBJECT: Population Projections

Date: August, 2004

AGENCY AND SOURCE OF COPIES: Statewide Planning Program
Rhode Island Department of Administration
One Capitol Hill
Providence, RI 02908-5870

SERIES NO.: Technical Paper Number 154

NUMBER OF PAGES: 66

ABSTRACT: This paper presents population projections by age, sex, and race for the state, counties, and cities and towns. Projections are estimates of the population for future dates. They illustrate plausible courses of future population change based on assumptions about future births, deaths, and migration. Projections are based on an estimated population consistent with the most recent decennial census as enumerated, projected forward using the cohort-survival method.

PREFACE

Population projections are central to planning. State and local governments rely on projections for forecasting land use, housing and transportation needs, and water and sewer infrastructure. Projections are also used in needs analyses for social services, schools, public libraries, and business developments.

This paper was prepared by Jim A. Andrade, Principal Systems Analyst, and Mark G. Brown, Principal Planner, with assistance from Vincent B. Flood, Principal Planner, under the supervision of John. P. O'Brien, Chief, Statewide Planning Program. Kim A. Gelfuso, Information Services Technician II prepared the document for internet access and publication.

This activity was carried out under Tasks 2103 (Socio-economic Data Base) and Task 2303 (Census Data) in the FY 2004 and FY 2005 Work Programs of the Statewide Planning Program.

INTRODUCTION

COMPONENTS OF POPULATION CHANGE INDICATE SLOW BUT STEADY GROWTH FOR RHODE ISLAND

Population projections are used in the planning of systems designed to address future needs. Housing, water supply, transportation, education, and many other social and infrastructure needs are being planned now, based on the size and demographics of the future population of the State of Rhode Island.

Although population projections are important planning tools, forecasting remains an imprecise endeavor. Several forecasting models are employed by planners, each with its own unique advantages and shortcomings. For example, there is (1) the linear model, (2) the exponential model, (3) the modified exponential model, (4) the Gompertz curve, (5) the comparative model, (6) the ratio method, and (7) the cohort survival model. The method selected depends on assumptions made about future trends in the area being studied, as well as the size of area under study and the level of accuracy and detail needed for the project.

The Statewide Planning program uses the cohort survival model to project the state's population. The cohort survival model projects each five-year age group separately. For each age group, the program computes the number of births, deaths, and migration during a given five-year period. The 2000 Census of Population was used as the base year in the development of the following projections.

<u>Year</u>	<u>Population</u>	<u>Births</u>	<u>Deaths</u>	<u>Net Migration</u>
2005	1,062,441	63,265	39,630	6,129
2010	1,074,199	61,448	41,239	7,250
2015	1,091,813	67,550	42,473	8,380
2020	1,111,464	70,655	44,052	9,586
2025	1,128,260	70,473	46,451	10,847
2030	1,140,543	69,666	49,699	12,117

Methodology

Input data for the cohort model was obtained from the U.S. Census Bureau, the Rhode Island Department of Health, and Rhode Island Statewide Planning. Vital statistics (births and deaths of Rhode Island residents) was obtained from the Department of Health for the years 1990 – 1999. Census Survival Tables for the United States were used to calculate the survival rates for the period under study. Information culled from the 2000 Census of Population for the State of Rhode Island was used as base-year data.

In order to determine the migration rates for the respective periods, we looked back at five-year population trends occurring between 1980 – 1985, 1985 – 1990, 1990 – 1995, and 1995 – 2000 in order to determine migration rates for the respective periods. The results are itemized below:

<u>Year</u>	<u>Population</u>	<u>Births</u>	<u>Deaths</u>	<u>Natural Change</u>	<u>Migration</u>
1980-85					
1980	947,154	63,148	46,457	16,691	4,066
1985	967,911				
1985-90					
1985	967,911	71,503	48,266	23,237	12,316
1990	1,003,464				
1990-95					
1990	1,003,464	71,863	47,619	24,244	-1,816
1995	1,025,892				
1995-00					
1995	1,025,892	62,827	48,474	14,353	8,074
2000	1,048,319				

Migration (interstate and international) is a major contributing factor in the development of population projections. Unlike the net natural change that results from the interaction of vital statistics (births and deaths), net migration for any specified period is based on a very fluid and ever-changing mix of domestic migration, and international immigration and emigration.

Migration does not show a clear trend. For this reason, the migration rate for 2000-2005 was computed using the average rate of the past decade. Because a slow but steady growth rate is expected over the next thirty years as employment opportunities increase and people are attracted to Rhode Island, the annual migration rate was increased by a growth factor of .001 for each subsequent five-year term.

The migration rates are:

2000 – 2005	1.006
2005 – 2010	1.007
2010 – 2015	1.008
2015 – 2020	1.009
2020 – 2025	1.010
2025 – 2030	1.011

Comparison with other projections

The resulting state totals are higher than previous projections made by the Division of Planning (May 1997) and higher (except in 2025) than the 1995-2025 projections published May 1997 by the U.S. Census Bureau.

SUMMARY OF SELECTED POPULATION PROJECTIONS

	<u>2000</u>	<u>2005</u>	<u>2010</u>	<u>2015</u>	<u>2020</u>	<u>2025</u>	<u>2030</u>
U.S. Census Bureau (May 1997)	990,000	1,012,000	1,038,000	1,070,000	1,105,000	1,141,000	x
Division of Planning (May 1997)	1,011,963	1,022,179	1,031,248	1,041,838	1,056,582	x	x
Statewide Planning (2004)	1,048,319 (actual)	1,062,441	1,074,199	1,091,813	1,111,464	1,128,260	1,140,543

Sub-State Projections

County and municipal projections of total population were developed using similar methodologies. County and local population growth trends were tabulated for the two periods of 1980 to 1990 and 1990 to 2000. The growth for the earlier decade of 1970 to 1980 was not factored in to eliminate the effect that the closure of the Navy bases in the early seventies would have on growth trends.

The total population growth by county for the twenty year period of 1980 to 2000 was calculated. That net figure was divided by the total population growth of the state for the same period to arrive at each county's percentage of state growth. That percentage of state growth was then applied to the net difference in total state population growth for each five-year projection interval. The product is the total county population projection for each five-year interval.

A similar methodology was used to arrive at the municipal projections by substituting the county population projections for the state figure as the control total.

Age, Sex, and Race for Counties and Municipalities

Data from Summary File 1 (SF1) of the 2000 Census was incorporated into the base year for Rhode Island's five counties and thirty-nine cities and towns. Individual data cells identified by age, sex, and race were calculated by applying the ratios from the corresponding age, sex, and race cohorts of the state projections to the total population projected for each community. Accordingly, the age, sex, and race projections for all municipalities for succeeding years (2005 – 2030) mirror those computed for the state profile.
